R E P O R T.

TO

THE RIGHT HON. SIR JAMES GRAHAM, BART., M.P.,

Her Majesty's principal Secretary of State for the Home Department.

SIR,

General Register Office, December 29, 1845.

IN my last Report, bearing date August 10th, 1844, I had the honour of transmitting to you, for the purpose of being laid before Parliament, a General Abstract of the Numbers of Births, Deaths, and Marriages registered in England and Wales during the year 1842. Upon the present occasion, I submit to you, for the same purpose, Abstracts of the Births, Deaths, and Marriages registered during the years 1843 and 1844. For those two years the ages at which the deaths occurred have not yet been abstracted, nor do I now submit to you, for the purpose of being presented to Parliament, the Abstracts of the Causes of Death during the same period.

In the course of the present year, in accordance with instructions with which you have honoured me, I have considered whether it may not be desirable that in future more extensive information should be afforded to the public with respect to the facts annually registered under this office. I am of opinion that the value of the Abstracts will be much enhanced if, in future, the Causes of Death are abstracted combined with the Ages at which the Deaths occur. Much valuable information also, it appears to me, will be afforded if, in future, Abstracts are given of the Deaths at different Ages in the different ranks and professions of society, in connexion with an Abstract of the Ages of the Persons following those professions as returned at the last Census. Thus, if the ages of the various classes of society in the metropolis, in some large towns, and in certain agricultural counties, or in the mining and manufacturing districts, are abstracted from the Census Returns of 1841, and if the deaths are abstracted in the same classes and districts for the seven years 1838-44, the relative mortality and duration of life can be satisfactorily deduced therefrom, and much light will be thrown upon the causes which really influence the health and well-being of the working, middle, and higher classes.

But, in order to effect this object, it is necessary that a new arrangement should be made in the publication of the results of the last Census. The country being now divided into districts and sub-districts, in which the births and deaths are registered, all calculations of the mortality and

increase must be made with reference to the population of those districts ; I propose, therefore, to publish in districts and sub-districts the Returns of the Census of 1841, with an arrangement of the parishes and places distinguished in former Censuses, under the heads to which their population, marriages, births, and deaths are referred. I now submit to you, in the Appendix, a new arrangement of the Census Returns of the county of Kent, as a specimen of the mode in which I propose to publish the Returns of each county of England and Wales.* I am indebted to the Statistical Society of London, to some members of the British Association for the Advancement of Science, and to several actuaries of eminence, for communications and suggestions in reference to these plans ; the results of which, when matured, shall be submitted to you for the purpose of being laid before Parliament.

To be enabled to make deductions on which greater reliance may be placed, from the Causes of Death recorded in the registers, combined with the Ages and Professions of the deceased, I have considered it my duty to make an effort to induce medical practitioners to give written statements of the Cause of Death, for the purpose of registration, in all cases where fatal diseases come under their notice. I have accordingly addressed a circular letter to all the authorized practitioners throughout the country, impressing upon them the importance of attention to this matter ; and I have also, at the same time, furnished them with books of blank certificates, to be filled up and placed in the hands of those persons who will be required to give information of the death to the registrar of the district in which the deceased resided.

My appeal to the medical profession has been responded to in the manner I anticipated ; and I am happy to be enabled to report that, with rare exceptions, the members of that liberal and enlightened profession, now generally state in writing, for the purpose of registration, the particulars respecting the fatal diseases which come under their notice. From their exertions I hope that a correct knowledge may be obtained of the comparative prevalence of various mortal diseases, of the localities in which they respectively prevail, and the sex, age, and condition of life which each principally affects ; and I trust that the Abstracts which in future years I shall be enabled to publish will form a useful addition to the records of the vital statistics of this kingdom.

An inconsiderable number—perhaps fifty persons—of the medical profession have refused to return the causes of death, for very various reasons ; one gentleman, because a Factory Inspector had displeased him, another because he had not been elected a medical officer under the new Poor Law, another because the remuneration under that law is insufficient, another because he is not specially paid for signing the written certificate. That it is the duty of the State to require from the medical attendants, and to register the cause of every individual's death which takes place in the country, appears to me incontestable ; and, as I have stated, I have found that the profession as a body comprising more than ten thousand qualified medical practitioners, and all the most eminent

* The Appendix appears in the folio edition presented to Parliament.

men in all branches of the profession—physicians, surgeons, and general practitioners—have expressed their readiness to return the causes of death in the best way the present state of medical science and their means of procuring information will admit. I have given explicit instructions that no certificate shall be received from persons known to be unqualified, or to have no diploma from either the halls, colleges, or recognized Universities; and I have determined not to attempt at present to compel the few medical practitioners who have refused to sign certificates, to return the causes of their patients' deaths; as although they may have diplomas, it is probable that the information they would be induced to furnish would be of little comparative value, and might mingle errors among the facts spontaneously supplied by enlightened, accurate observers. If the Legislature should appoint health officers to act with the coroners, and to inquire into the causes of the deaths of persons who are not attended medically at all, or are attended in fatal diseases by quacks and unqualified practitioners, it may be thought right to inquire into the deaths of patients attended by men holding diplomas who refuse to state the causes of death to the best of their ability.

I have also called the attention of coroners to the importance of returning, in all fatal cases inquired into by juries, the causes of violent deaths, more accurately and more in detail than has, except in a few cases, been done hitherto, in the hope that, when these causes are determined and carefully analyzed, means may be devised for guarding against their effects, for throwing additional security around human life, improving the public health, preventing crime, and advancing medical science. At pp. 252, 254, and 315, I have inserted the circular letters which in the course of this year I have addressed to the medical profession, to Registrars, and to the Coroners throughout England and Wales, and I have republished the Summary of Causes of Death by Violence registered during the year 1840, with the Abstract of Deaths by Different Causes in the five years 1838-42.

The number of marriages, births, and deaths registered in the seven years in which the Registration Act has been in operation were: (a)—

In the seven years 861,286 marriages, or the marriages of 1,722,572 persons were registered, and in the same time 3,556,649 births and 2,437,922 deaths were recorded. Registration, postponed by the Act

of 7th Will. IV., cap. 1, commenced July 1st, 1837, and if the marriages, births, and deaths registered in the half-year of 1837 be added, the total number of names entered on the register up to December 31st, 1844, is 8,146,918.

All the marriages and deaths which have happened in England, (including Wales throughout this Report,) have been registered since the beginning of 1838, or the omissions have been so few as not to require to be taken into account.

Many births have escaped notice, particularly in the first years of registration, as parents are not bound to give information of a birth unless "requested so to do" by the Registrar: latterly, by increased vigilance and better arrangements, the defects have much diminished, and the zeal and exertions of the officers employed under the Act will, I confidently expect, render this branch of registration as complete as is possible in the present state of the law.

The population of England, enumerated on June 7th, 1841, was 15,912,773.* It may be estimated at 15,927,867 on July 1st, 1841. Disregarding emigration, and assuming for the moment that the births registered represent the number of children born in each quarter, 123,868 persons were added to the population by birth in the three months following July 1st, 1841. And in the same period 75,440 persons of all ages were taken from the population by death; leaving on October 1st, 1841, the population 48,428 more than it numbered on July 1st; we have therefore $15,927,867 + 48,428 = 15,976,295$, the population on October 1st, 1841. Proceeding in the same manner the population at the beginning of every year by this method is compared (b) with the population calculated on the usual hypothesis.

The population (female) increased 1·335 per cent. annually from 1831 to 1841; it increased very regularly at rather a faster rate from 1801 to 1831; and from the known circumstances of the country in the present decennium, the inference is probable that the mean rate of increase has hitherto been as high as that which prevailed from 1831 to 1841. The population of England estimated at that rate of increase was 16,684,600 on January 1st, 1845; and will be 17,000,000

* Enumeration Abstracts of Census, 1841, Part I. page 464. 1016 officers and convicts in hulks on the Medway are added to the total given by the Census Commissioners.

(b)

on January 1st, 1842, was 16,017,777	168,220	16,033,800	214,100
,, 1843 ,, 16,185,997	180,879	16,247,900	216,900
,, 1844 ,, 16,366,876	183,813	16,464,800	219,800
,, 1845 ,, 16,550,689	..	16,684,600	..

before Midsummer, 1846. About 222,000 souls are added to the population of this part of the United Kingdom annually. (c)

The numbers in the population returns are augmented by the immigration of the Scotch, of the Irish, and of persons born in other parts of the empire, as well as by an increase of foreigners residing or travelling in the country. Upon the other hand, the numbers of the population at home between any two Censuses, such as 1831 and 1841, are diminished by emigration; by any increase in the interval in the army, navy, merchant service, civil service in India, or in the Colonies; and by the number of absentees and travellers abroad at the last exceeding those away at the previous Census.

To secure a complete statistical account of these "movements" of the population, the Census lists should be revised annually, and registers should be kept of those who leave or enter the country, as well as of births and deaths. In the absence of the information which such a system would furnish, it is impossible to determine the precise extent of the deficiency in the registration of births.

Returns for the 10 years, 1831-1840, of the Baptisms and Burials according to the rites of the Established Church were procured from the clergy by the Census Commissioners, and it will be interesting to compare those returns with the returns under the Registration Act.

The number of marriages, baptisms, and burials in each of the 20 years, 1821-40, is subjoined. (d)

The returns of the three years 1838, 1839, 1840, contemporaneous with the returns under the Registration Act, show that the deaths of 15 per cent., or between a sixth and a seventh part of the people who died in England, were not recorded in the parish registers. The defects in the Church registers remained nearly the same in the two last years, and it is probable that they have ranged within a narrow limit during the whole of the present century; I have, therefore, to obtain the whole of the deaths in the ten years, 1831-40, raised the burials returned by the Clergy in the ratio of 883,912 to 1,041,160. Upon this estimate 2,934,521 burials returned in the church registers, imply that nearly three million and a half (3,456,573) persons died in England. (e)

The number of emigrants from the ports of England and Wales were 429,775 in the 10 years, 1832-41.* A "large proportion were natives

* Report of Census Commissioners, Ireland, p. xxviii.

port estimated the proportion of Irish at two-thirds, or 152,738 of the number. "There is no reason to suppose that Ireland has contributed so largely to the emigration from any other port [in England] as that of Liverpool," and the Irish from other ports not distinguished in the returns, must be left as a set-off against transported convicts and English emigrants not registered in our own ports, or proceeding from the ports of Scotland and Ireland. Deducting 152,738 Irish from the 429,775 emigrants, 277,037 remain, who may be held to represent the number of English emigrants in the 10 years.

Of the 15,912,773 persons, enumerated in 1841, 432,974 were returned as having been born out of England; namely, 103,238 in Scotland, 289,404 in Ireland, 1088 in the Colonies, and 39,244 in our foreign possessions, and in foreign parts. The birth-place of soldiers, sailors, and others, amounting in all to 116,112, was not returned; assuming that 15,000 of them were born out of England, the total number of the population not indigenous (*advenæ*) was 447,974; and if we can determine how many persons must have entered the country annually to amount to 447,974 in 1841, the number of immigrants into England, hitherto unknown, may be estimated. As the enumeration of the *advenæ* in 1841 was the first in which they were returned, and their ages as well as the time in which they came in are not given, the problem is indeterminate; it may be solved, however, upon probable data, and the limits of error fixed.

If the Irish, Scotch, and other immigrants, all entered in families of all ages, in equal numbers within each of the 10 years, 49,584 must have come into the country annually to amount to 447,974 in 1841, if they all came in equal numbers year by year, during the 20 years ended in 1841, 27,416 must have entered annually,* or 274,160 must have entered in the last 10 years.

As young children and old people among immigrants are in less than the usual proportion, it may be assumed that the whole class is represented at the time of entering the country by persons between the ages of 15 and 55; 25,755 of such annual immigrants would in 20 years amount to 447,974.† The number (25,755) differs little from 27,416, which I am inclined to consider a sufficiently near approximation to the annual number of immigrants in the 10 years, June 1831-41; and which differing little from the annual number of emigrants (27,704) previously cited, allows us to admit the simple and until now unsupported hypothesis of Mr. Rickman and other writers, that the immigration of the Scotch and Irish into England nearly counterpoises the emigration of Englishmen by birth to the colonies and foreign parts.

* 548,460 immigrants would, at this rate, come into England in twenty years, but 100,486 of them would die, leaving 447,974 alive at the end of the time.

† For the formula and table from which the calculations have been derived, see Appendix to Sixth Report, page 547 and page 561, 8vo. edition. If the number of annual immigrants

be represented by i , then $i = \frac{Q_{x|y}}{Y_{x|n} - Y_{x+y|n}} \times \text{advenæ}$. The immigrants are supposed to be subject to the same law of mortality as the whole population on which the English table is constructed. The calculation can only be made by means of the new form given to that life table.

59,348 persons resident in Ireland (21,552), and Scotland (37,796) when the Census was taken, and there stated to have been *born in England*, imply, however, the removal of from 3400 to 3600 persons annually from England to the other parts of the United Kingdom. The greater part of them may be the offspring of Scotch and Irish parents, but added to the 27,704 annual emigrants, they make the total numbers who left England in 1831-40 more than 310,000, which is 36,000 more than the estimated number of immigrants. It is possible that to something like this extent (3600 a year), the persons born in England who leave, exceed those born elsewhere who come into the country ; but for practical purposes it may for the present be assumed that the immigration and emigration are equal.

The results of this inquiry may be briefly summed up:—		
Population enumerated in England about May 29th, 1831,	13,897,187	
Add for unenumerated Army, Navy, merchant seamen at home	69,487	
Population in England, 1831	13,966,674	
Deduct, Deaths	3,456,573	
Emigrants	277,037	
	3,733,610	
Residue to be subtracted from the existing population, 1841,	10,233,064	
The population, May 29, estimated from the population enumerated June 7th, 1841 (including Army, &c. &c.) }	15,907,867	
Number of persons who entered the population by birth, and immigration in 10 years	5,674,803, or 567,480 annually.	
Subtract for immigrants, &c.	277,037, or 27,704 , ,	
Then the births in the 10 years must have been	5,397,766, or 539,777 , ,	
But the baptisms performed and registered at the Established Church were	3,965,725, or 396,573 , ,	
The Births in the 10 years not entered in the parish registers were consequently	1,432,041, or 143,204 , ,	
Persons entering in the 10 years, including births not in the register, immigrants, &c.	1,709,078, or 170,908 , ,	

NOTE.—The baptisms and burials were returned for the 10 years, 1831-40; the emigrants for the 10 years 1832-41; while the population was enumerated at the end of May, or the beginning of June in the years 1831, 1841. No correction has been made for this discrepancy in the dates, (ee).

Before quitting this subject I shall make a remark or two on the increase of the population of the United Kingdom, including England, Wales, Scotland, Ireland, the Channel Islands, the army, navy, and merchant seamen abroad, as well as at home.

(ee) A similar return for Prussia is added for the sake of comparison from the official Report of Mr. Dieterici.—Die Statistischen Tabellen des Preussischen Staats, 1845.

	Years.	Population of Prussia.	Increase in Three Years.	Excess of Births in the same Years.	Increase of Population unaccounted for by the excess of Births over Deaths.
Population enumerated at the close of the Years .	1837	14,098,125	830,376	486,937	343,439
	1840	14,928,501	543,264	524,669	18,595
	1843	15,471,765

The table (f) has been drawn up from the returns of the Census Commissioners; but includes, on the authority of a note in the English Report, 17,992 British soldiers in the service of the East India Company. No return having been procured in 1831 of the English force in India, 15,000 have been added on that ground to the male population returned.

The increase of the population of the United Kingdom in 10 years is 10·79 per cent., which is at the rate of ·01030, or of 1·030 per cent. annually.

Speaking in round numbers the population increased 11 per cent. in the 10 years 1831-41, which is very nearly at the rate of 1 per cent. annually: at this rate the population will double in 68 years. The increase of males was 1·033, of females 1·028 per cent. annually, a difference exceedingly slight. I subjoin a table of the population of the United Kingdom calculated at the above rate of increase for each of the 12 years, 1841-52. (g)*

The population, at the same rate of increase, will be 30,000,000 in January 1852. The increase was 2,639,817 in the 10 years, June 1831-41, or on an average 263,932 annually.

About 291,000 people will be added to the population in the year from Midsummer 1845 to 1846. The statement, so often repeated, that the population of the United Kingdom increases at the rate of 1000 a day is an error which has arisen probably from using the annual rate of increase in England ($1\frac{1}{3}$ per cent.) instead of the lower rate of increase (1 per cent.) for the United Kingdom. At the present time it is probable that 800 persons are added to the population daily. The

(f) Population of the United Kingdom.

(g)

In the middle of the Years	The estimated Population of the United Kingdom.	Annual Increase.	In the middle of the Years	The estimated Population of the United Kingdom.	Annual Increase.
1841	27,064,000	278,000	1847	28,780,000	296,000
1842	27,342,000	282,000	1848	29,076,000	300 000
1843	27,624,000	285,000	1849	29,376,000	303,000
1844	27,909,000	287,000	1850	29,679,000	305,000
1845	28,196,000	291,000	1851	29,984,000	309,000
1846	28,487,000	293,000	1852	30,293,000	

* Let $r = 1 +$ the annual rate of increase ($\cdot 01030$) $= 1\cdot 01030$; then the logarithm of $r = 0\cdot 0044509$, from which the period of doubling is deduced by the formula $r^x = 2$; $x \lambda r = \lambda 2$; $x = \frac{\lambda 2}{\lambda r}$; or $\lambda x = \lambda \lambda 2 - \lambda \lambda r$, the latter being the most convenient form for calculation.

births exceed the deaths by about 1056 daily, but emigration from the United Kingdom keeps down the increase.* I have before shown that *England*, in which the daily births exceed the deaths by about 600, "gets rid" of but a small portion of what has been ignorantly called its "superfluous population" by emigration; the greater part of the English emigrants being constantly replaced by natives of Ireland and Scotland.

The following table shows the number of marriages, births, and deaths registered in each quarter of the year, from July 1st, 1837, to the end of 1844. The greatest number of births and deaths takes place in the winter, the least in the summer quarter; but the increase of population is greatest in the spring and summer quarters, when the seasons are most genial, and the circumstances of the people are most favourable to life, (*h*)

* The emigration from the United Kingdom was 821,742, or 82,174 persons annually in the 10 years 1831-40; 87,436 annually in 1842-4; and 93,501 in 1845.

Marriages.—More marriages were celebrated in 1844 than had ever before been registered in England. The number was 132,249. In 1843 the number was 123,818, more by 4993 than were registered in 1842. The 118,825 marriages in 1842 were much below the average number; so few had not taken place in any year since 1832.

The proportion of marriages to the population went on declining from 1839 to 1842, increased in 1843, and attained the maximum in 1844. In the tables (*i*) (*k*) it will be seen that the fluctuations were greatest in the North-western Division, Yorkshire, and the Metropolis. In the Eastern and Southern Divisions the changes were not considerable.

The table (*l*) shows the numbers married according to the rites of the Established Church, in registered places of worship, and in Superintendent-Registrars' offices. The last two columns exhibit a considerable increase. The marriages in 1844, by Superintendent-Registrars' cer-

* Of the 8,564 marriages in 1844, 2,280 were in Roman Catholic chapels; and 6,284 in the chapels of other denominations.

tificates, were 1558; in registered places of worship 8564; in Superintendent-Registrars' offices 3446. From 1842 the number of marriages by banns increased 9432, while the Church marriages by licence decreased, which shows that the increase chiefly affected the classes who marry by banns. In Lancashire 1730 marriages were performed by licence, 9638 by banns in the year 1842; in the year 1844 the number by banns rose to 12,692, by licence to 1823 only. The marriages are regulated to a certain extent by the circumstances of the people; and as the decrease in 1842 is a proof of depression in their condition, the increase in 1844 is a sign of decided improvement in their prospects.

The average annual number of marriages in the $7\frac{1}{2}$ years between Quakers was 67, between Jews 146. The marriages of Quakers decreased considerably; those of Jews increased. In 1844 I had the marriages in Roman Catholic places of worship abstracted separately; the number was 2280. If all the Quakers, Jews, and Roman Catholics who married, were married according to the rites of their several religions, and in the average proportion of the whole population—namely, one marriage to every 129 of their respective bodies, the numbers in England must be:—Quakers, 8643; Jews, 18,834; Roman Catholics, 294,120. The Quakers appear to be dissolving into the general population of the country, under the benign influence of religious toleration; and when we reflect that the great majority of the 289,404 Irish by birth, exclusive of the Irish born in England, are Roman Catholics, the inference is that the number of English Catholics is small. It is right to observe, however, that a few Roman Catholics are married at Superintendent-Registrars' offices; and are referred to that head in the abstracts.

Of the 2280 marriages between Roman Catholics, 384 were registered in the Metropolis; 311 in Liverpool, 138 in Preston, 207 in Manchester, making with the other districts of that county 1123 in Lancashire.

It is not so easy to determine approximately the number of members of the Established Church and the members of the other religious denominations, between whom, practically, a line of demarcation cannot well be drawn, as many persons attend more than one of the recognized religious services and ordinances of the country. Those who take as the basis of calculation the marriages of 1844 will make 91 per cent. (90·7) of the population, members of the Church of England, while only 85 per cent. were buried (1838-40), and 70 per cent. baptized (1831-40), according to her rites. Those who make their estimate on the relative number of communicants or hearers at churches and chapels will no doubt find different proportions.

The manner in which baptism is deferred and neglected by members of the Church is shown by the Returns of Baptisms in 1837, when civil registration was first introduced. The baptisms at the Church rose from 387,971, in the year 1832, to 405,875 in 1834; they then, instead of increasing, fell to 405,137 in 1836. Great exertions, I believe, were made by the clergy, and the result was, that 462,893 children were

baptized by them in the year 1837; after that year the Church baptisms declined. It is probable that the baptisms among the dissenting religious denominations who favour infant baptism, may have increased, but respecting that I possess no information.

Marriages of Minors.—4·17 per cent. of the men married, and 13·16 per cent. of the women married, in 1844, were under 21 years of age. These premature marriages show a slight tendency to decrease, but are still more frequent than is desirable. (m)

The very different proportions of minors in the several counties will be seen in the Table, pp. 44, 45.

The exact age of the parties at marriage is stated by some clergymen: it is one of the most important facts that can be recorded, and will be found more useful perhaps than any other in identifying individuals, and in tracing remote pedigrees of persons having names in general use.

The statistics of a country in which the age of the mother at marriage and at the birth of her children is not recorded must always remain imperfect, and leave us without the means of solving some of the most important social questions.

Re-marriages.—12·81 per cent. of the men, and 8·46 per cent. of the women, married in 1844 had been previously married. (n) The proportions, depending both on the mortality and the disposition to marry, differ considerably in the several counties (Tables, pp. 42–45), but are very constantly the same in the same county from year to year. In Cornwall 6·1 per cent. of the women married in 1844 were widows, and 5·4 per cent. in 1843; in Lancashire 9·6 per cent. of the women married in 1844 were widows, and 9·6 per cent. in 1843.

Men and Women who sign the Marriage Register with Marks.—Persons, when they are married, are required to sign the Marriage Register; if they cannot write their names, they sign with a mark: the result has

hitherto been, that nearly one man in three and one woman in two married, sign with marks. (o)

Only 67 in 100 men, and 51 in 100 women, wrote their names. It is probable that a few women, able perhaps to write letters intelligible to their friends, signed with marks; but this simple test leaves little doubt that 33 in 100 of the men, and 49 in 100 of the women of England, at the marriageable age, are either quite unable to write, or write very badly. Some objections have been raised against this return as a test of the state of education. And it should be taken for no more than it is worth. I have already stated that a certain number of the women able to write, either from timidity or from other motives, may not have written their names. Upon the other hand, many who write their names are able to write little else; and writing the name is no proof of the possession of

that stock of the elements of literary and scientific knowledge which it is desirable that the whole mass of a civilized nation should possess. But the return is of unquestionable value, as an evidence of the *relative state* of elementary education in different parts of the country, and at different times.

It will be seen (Tables *o* and *oo*) that there is a very slight diminution in the proportion of men who signed with marks during the six years, 1839-44. The average age of men at marriage is about 27 years, and if the mean age of boys during their education be 10 years, the great bulk of the persons married in 1839-44 learnt to write between the years 1821 and 1827.

The slow progress of instruction in those years is evinced by the facts, that 66·3 per cent. of the men wrote their names in the first, and 67·6 per cent. (only 1·3 more) in the last year (1844); while 50·5 per cent. of the women wrote their names in the first, and only 50·8 per cent. in the last year. I fear that the records of future years, in exhibiting the results of the inadequate means employed to educate the present generation of youth, will be as little flattering to our age as the actual returns are to our predecessors. The insufficiency of the national education is the more to be regretted, as the means of education exist, and the funds left for educational purposes, if properly applied, in the charities and public institutions, would, with some assistance from Parliament, supply the children of the poor with the sound knowledge which the scanty earnings of the parents do not enable them to purchase. The annual income of endowments for education is 312,544*l*.

The state of education varies in different counties to an incredible extent; and it will be observed, that in all counties of any amount of population the proportions of men and women who write remain very constant, from year to year, or vary slowly. (*p*)

The variations would be less if the decimals were retained in the

(*oo*) Proportion per Cent. of Persons Married under 21 Years of Age, of the Re-marriages of Widowers and Widows, and of Persons who signed the Marriage Register with Marks in England, 1839-44.

calculation, and if the inducements to marriage affected the educated and uneducated classes equally in every year. In Table (q) the divisions and counties are arranged in the order of the numbers educated, beginning with those in which the greatest proportion of men are able to write.

Why should not a great effort be made in the ill-instructed counties to attain at least the same degree of elementary education as is possessed by the people of the northern counties ?*

Births.—The births of still-born children are not registered in England. I state this to prevent mistakes, as the still-born are registered in every other country, but upon loose, ill-defined principles, which render any comparison of the results impossible or fallacious. The still-born, in England, imply children born who never breathe in the world. If a premature infant of six months breathe, it is said to be born alive, is registered among the births, and if it die, among the deaths. The discrepancies in the returns of the still-born in foreign states prove beyond a doubt that their registration is imperfect ; and it must always remain so, unless the period of intra-uterine life be defined at which the birth, if premature, is to be registered. In some countries the *fœtus* of four or six months is apparently registered among the births ; in others, only mature infants.

I have already adverted to the deficiencies in the registration of births ; and as the system of registration appears to have grown more efficient from year to year, the increase of the proportion of births to the population during the six years in the next Table (r) is probably only apparent ; more births have been registered, but more children may not have been born in proportion to the population.

In attempting to calculate the relative fecundity, the births, as well as the marriages, should be compared with the number of women, married and unmarried, at several ages ; but until the Census Returns are arranged, as I have proposed, in districts instead of hundreds, it is not possible to compare the births and marriages with the variable number of adults in the several divisions and counties. I have no alternative but to adopt the usual course, and to give the proportion of marriages and births to the male and female population ; the results are

(p) Proportion per Cent. of Men who signed the Marriage Register with Marks.

* The Irish Census Commissioners (p. lxxxvi), give a return, from which it appears that 66 per cent. of the army, between the ages of 15—26, serving in Ireland, can read and write. This agrees with the abstracts in the English Report. Only 49 in 100 French conscripts could write in 1836. The English is therefore better educated than the French army, which stands in this respect as low as the men of Bedfordshire.

approximations, which show the relative fecundity with sufficient accuracy for many purposes. (*r*)

During the six years, 3215 children to 100,000, or nearly 3·2 to every 100 (namely, 50 males and 50 females) of the population, were born alive and registered: this proportion is nearly equal to *one* annual birth to every 31 persons living. In 1839, the births to 200,000 living (namely, 100,000 males and 100,000 females) were 6354; in 1844 the proportion had risen to 6529. In 1844 the proportion of births to population in the 11 divisions ranged from 6040, in the south-eastern division, to 7427, in the north-western division; and the difference in the several counties will be found still greater (*see* pp. 26, 30.)

Mortality.—The annual mortality during the seven years, 1838-44, was 2·189 per cent., or 1 in 46 of the population: it was above the average in 1838 and 1840; near the average in 1839; lower in 1841 and 1842; lowest in 1843 and 1844 (tables, pp. 26 and 32). It varied from 1 in 43·7 (year 1840) to 1 in 47·2 (year 1843). In the three first years (1838-40) the mortality was 2·239 per cent., in the three last (1842-44) 2·147 per cent., a fall of 1-24th part. Out of an equal population, for every 24 deaths in the three first, there were only 23 deaths in the three last years. The average price of wheat was 67*s.* 2*d.* in the three first, and 52*s.* 10*d.* in the three last years. The average price of butchers' meat per cwt. paid at Greenwich Hospital was 48*s.* in the three first, and 44*s.* 7*d.* in the three last years. The mean daily wages of bricklayers, masons, plumbers, and carpenters (of which an account has been kept at the Hospital for many years) rose from 5*s.* 2*d.* a-day, in 1838-40, to 5*s.* 6*d.* in 1842-44.* The declared

* From Returns, with which I have been favoured by the Hospital authorities.

annual value of British and Irish produce and manufactures exported from England and Wales, was 47,138,173*l.* in the three years 1838-40, and 48,400,977*l.* in the three years 1842-4; the annual official value of imports in the corresponding years was 56,269,884*l.* and 62,141,101*l.** The annual amount of money expended on the relief of the poor in England was 4,581,600*l.* in 1838-40, and 5,074,600*l.* in 1842-4. It was 493,000*l.* more in the latter than in the former years. In the last three years, therefore, the price of provisions was cheaper, the commerce and manufactures of the country more active, the relief to the destitute more liberally administered, and the wages of artisans higher, than in 1838-40; and all these circumstances, favourable to the public health, undoubtedly contributed to the reduction of the mortality observed.

The mortality in the division comprising Cheshire and Lancashire rose progressively up to the year 1840, when it was 2·957 per cent., and fell gradually to 2·384 per cent. in 1844; the mortality of Yorkshire described a similar course. The difference in the annual mortality of these two divisions was very considerable; in the north-western division 2·789 per cent. in the first, 2·467 in the last three years: the difference of the two numbers is ·322. (*s*)

The divisions are arranged (p. 21) in the order of their mean mortality, which, it will be observed, ranges from 2·616 per cent. annually (1 in 38) down to 1·918 per cent. (1 in 52) annually. The lowest mortality in any division in any one year was 1·802 per cent., in 1843, in Wales and Monmouthshire; the highest mortality 2·957 per cent., in 1840, in Lancashire and Cheshire. Table, p. 34, exhibits the marriages, births, and deaths in the several counties, arranged in the order of the mortality; it will be observed that the marriages and births are most numerous relatively to the population in the counties where the mortality is highest.

Through the whole seven years, in every division, the mortality of males is greater than that of females (table D, p. 32.)

M. Moreau de Jonnés has favoured me with the latest official returns of the marriages, births, and deaths in France; and I am indebted to the Austrian Government for similar returns for all the provinces of that great empire, except Hungary, Transylvania, and the military frontier. The foreign returns are for the year 1843; those for 1844 have not yet been prepared, and cannot therefore be compared with the English Abstracts for that year. (*t*) The mortality of England is the lowest; but to render the comparison between the three empires accurate, Scotland, Ireland, and the Channel Islands should be united in a general return with England. I have stated, in a previous Report, that periodical Returns of Marriages, Births, and Deaths, are published by nearly all the States of Europe: by the Papal and other Italian States; by the small Cantons of Switzerland; by Austria, Prussia, and the German States; by Sweden, Norway, Denmark, Holland, Belgium, France, and Russia.

Returns of the Marriages, Births, and Deaths are not published for

* From a Return with which I have been favoured by Mr. Porter, of the Board of Trade.

Deaths

For Russian Returns see 10 e p. 24.

Spain, Greece, Hungary, Transylvania, or Turkey; with these exceptions, Ireland and Scotland are, I believe, the only parts of the civilized States of Europe in which authentic official registers of these important events are not kept. In Spain, I understand that the births, deaths, and marriages are registered by the clergy, though no returns are yet made to the Government. The marriages of members of the Church of England, of Presbyterians, and of other denominations of Protestants, are registered in Ireland under a recent Act of Parliament, and returns of their numbers are made. These returns are imperfect, as they do not include the marriages of Roman Catholics.

I submit to you that the Marriages, Births, and Deaths of the people of Scotland, Ireland, and England should all be registered on a uniform plan; and that the inquiry, which has already been so successful and beneficial in England, into the causes of death, should be extended to Ireland and Scotland.* Like the institution of the coroner's jury, this inquiry deters from crime, fosters a reverence for human life, and by discovering the causes of premature death in the various circumstances of the population, will contribute to the progress of the science of medicine, diminish suffering, and lead to the prolongation of human life to its natural term. No argument that I am aware of can be used in favour of registration which does not apply to Scotland and Ireland.

Valuable Bills of Mortality, which only require extension, have been published for many years by the cities of New York, Philadelphia, and Baltimore (I believe); the State of Massachusetts has also procured partial returns of Births, Deaths, and Marriages.† With these exceptions, America—including Canada, the United States, Mexico, and the other States—is, in respect to the statistics of health and human life, on nearly the same footing as Asia and Africa.

The arrangements which in 1844 were made under your directions for appointing Registration Inspectors, have been attended with success. The duties assigned these officers to visit and instruct each person entrusted with the duties of Registration, have been well performed by the gentlemen nominated as Inspectors; and I am happy to be enabled to report, that this department has derived great advantage from the zeal and assiduity with which their task has been executed.

* The city of Glasgow appoints a city statist, and has for many years had an excellent series of returns of Deaths and Births begun by Dr. Cleland, and now carried on in a very efficient manner by Dr. Watt. The town-council of Edinburgh has lately voted a small sum towards the monthly publication of Bills of Mortality, commenced with great public spirit by Dr. Stark.

† A law was enacted in Massachusetts soon after its settlement, requiring records of Marriages, Births, and Deaths; and it was observed with considerable care in the early periods of the State's existence; "but latterly it has been much disregarded." For the two last years the enlightened city of Boston made no returns. The inefficiency in which the law is left is the more to be regretted, as the Secretaries of State have shown every disposition to render the information which they have placed at their disposal, available for the public good. Their Annual Reports are drawn up with great ability, and are only imperfect because the returns are incomplete. The Report of the Committee of the City Council, appointed to obtain the Census of Boston for the year 1845, by Mr. Shattuck, leaves little to desire in this department of Statistics.

At pages 86, 87, is a Return of the Number of Places of Religious Worship, registered 31st December, 1845, for the celebration of Marriages, distinguishing the number registered in each county by each Religious Denomination : since June, 1844, 235 additional buildings have been registered.

The publication of the Table of Mortality for 115 of the most populous districts, comprising the principal towns of the kingdom, has been continued at the expiration of each quarter. From this return an accurate knowledge is derived of the sanatory state of the country, and immediate warning given in the event of the mortality increasing from the sudden spread of an epidemic disease.

I have continued also to publish a Weekly Table of Mortality for the metropolis, to which I have added a return of the Births registered during each week. I have endeavoured to increase the utility of this weekly publication, by giving more in detail the causes of death as returned by the medical officers of the metropolitan hospitals, at coroners' inquests, and by medical practitioners. The meteorological observations taken during the preceding week, at the Royal Observatory at Greenwich, are furnished to me by G. B. Airy, Esq., the Astronomer Royal, and are also published in the Weekly Table of Mortality. From these valuable observations, the influence of temperature, moisture, electricity, and other meteorological phenomena on the health and diseases of two millions of people in the metropolis of England may be determined.

I have the honour to be,

SIR,

Your faithful Servant,

GEORGE GRAHAM,

Registrar-General.

RUSSIA.

Note.—I have not yet been favoured with the Returns for 1843, by the Russian government. The Marriages, Births, and Deaths, among members of the *Greek church*, in the three years 1841, 1842, and 1843, are given by Von Reden, in the recent edition of his "Vergleichende Kultur-Statistik." The reported deaths by violence were 6,486 in 1842, and 8,220 in 1844. This return of violent deaths is evidently imperfect.

Years.	Marriages.	Births.			Deaths.		
		Total.	Males.	Females.	Total.	Males.	Females.
1841	476,731	2,186,430	1,123,532	1,062,898	1,799,210	911,555	887,655
1842	497,123	2,138,478	1,093,084	1,045,394	1,822,743	916,067	906,676
1843	..	2,304,761	1,182,850	1,121,911	1,573,043	795,943	777,100

The Official Returns furnished to the Registrar-General for 1842 were—Marriages, 501,850; Births, 2,205,422; Deaths, 1,856,183 among the general population, including the *Greek and other churches*, but exclusive of the deficient returns from Koursk, one of the provinces of Great Russia; from Georgia, Ketch-Enikil, and three provinces of Siberia. —(*See Reg.-Gen. 6th Ann. Rep., 8vo., pp. 323-325.*)

T A B L E S.

The Table may be read, without reference to the decimal points, thus:—To 100,000 males living there were in England annually 1,581 marriages, 6,576 children born alive and registered, and 2,272 deaths of males; to 100,000 females living 1,511 marriages, 6,285 children born alive, and 2,105 deaths of females; to 100,000 persons (50,000 males and 50,000 females) there were 773 marriages, 3,215 births, 2,189 deaths—or annually 1 marriage in 129, 1 birth in 31, and 1 death in 46 of the population, corrected for increase and so as to make the number of males and females equal.

TABLE B.—The Marriages in the several Divisions and Counties of England, to 100 Males and to 100 Females living, in each of the 6 Years 1839–44.

NOTE.—The two tables for the Causes of Death at different ages were constructed from the Returns made weekly by the Registrars for the purpose of compiling the Weekly Tables of Mortality. One process of abstracting was thus made to answer two purposes; and the errors from this source cannot be considerable. In any calculation the deaths in 52 weeks are easily raised to those in the mean year. The deaths under the age of 20 are those of persons aged 20 and under 30 at the time of death; and so for other ages.

NOTE.—The two tables for the Metropolis of the Causes of Death at different ages were constructed from the Returns made weekly by the Registrars for the purpose of compiling the Weekly Tables of Mortality. One process of abstracting was thus made to answer two purposes; and the errors from this source cannot be considerable. In any calculation the deaths in 52 weeks are easily raised to those in the mean year. The deaths under the age of 20, are those of persons aged 20 and under 30 at the time of death; and so for other ages.

1844. METROPOLIS.—Deaths in 52 Weeks, from 95 Causes at 14 Periods of Life—continued.

NOTE.—The 9980 deaths by violence, and 901 cases of ascertained suicide, making together 10,881 cases of death, are 713 less than the 11,594 cases in the Abstract of the Fourth Report. In the present classification, cases left doubtful in the vague returns, as of children exposed without marks of violence, have not been included.

ENGLAND.—An Abstract of the Causes of Death by Violence (exclusive of ascertained Suicides), showing the Occupation and Age, as registered during the Year 1840.

Deaths of Males and Females at all Ages.

NOTE.—When a District runs into two or more Counties, it has been placed with the County in which the greater part of the population is situated; hence these groups of Districts designated Counties rarely, if ever, correspond with the strict boundaries of the respective Counties named.

* Wandsworth having been placed with the Metropolis in 1844, the marriages celebrated in that district during the preceding years 1839-43 have been taken from Surrey, South Eastern Division, and added to those of the Metropolis, Division 1.

MARRIAGES Registered in England, pursuant to the Act of 6 and 7 Will. IV., cap. 86, in the Four Quarters of the Years 1839, 1840, 1841, 1842, 1843, and 1844, ending 31st March, 30th June, 30th September, and 31st December.

NOTE.—When a District runs into two or more Counties, it has been placed with the County in which the greater part of the population is situated; hence these groups of Districts designated Counties rarely, if ever, correspond with the strict boundaries of the respective Counties named.

* Wandsworth having been placed with the Metropolis in 1844, the marriages celebrated in that District during the preceding years 1839-43, have been taken from Surrey, South-Eastern Division, and added to those of the Metropolis, Division 1.

Marriages registered in England in the Four Quarters of the Years 1839, 1840, 1841, 1842, 1843, and 1844—continued.

* Seven cases, in which the sex is returned as unknown, are included in the Males.

NOTE.—When a District runs into two or more Counties, it has been placed with the County in which the greater part of the population is situated: hence these groups of districts designated Counties rarely, if ever, correspond with the strict boundaries of the respective Counties named.

NOTE.—When a District runs into two or more Counties, it has been placed with the County in which the greater part of the population is situated: hence these groups of Districts designated Counties rarely, if ever, correspond with the strict boundaries of the respective Counties named.

* The District of Wandsworth was taken from Surrey, Division 2, and placed with the Metropolis, on 1st January, 1844.

1844.—MARRIAGES. 1.—METROPOLIS.

NOTE.—When a District runs into two or more Counties, it has been placed with the County in which the greater part of the population is situated; hence these groups of Districts designated Counties rarely, if ever, correspond with the strict boundaries of the respective Counties named.

* The Births in the District of Wandsworth have been added to those Registered in the Metropolis. In the six former Reports Wandsworth was in Surrey, (Division No. 2.

1844.—BIRTHS. 1.—METROPOLIS.

NOTE.—When a District runs into two or more Counties, it has been placed with the County in which the greater part of the population is situated: hence these groups of districts designated Counties rarely, if ever, correspond with the strict boundaries of the respective Counties named.

* Seven cases, in which the sex is returned as unknown, are included in the Males.

+ The District of Wandsworth was taken from Surrey, Division 2, and placed with the Metropolis on 1st January, 1844.

1844.—DEATHS. I.—METROPOLIS.

FIRST EDITION (1843.)

THIS publication contains all the official documents issued from the General Register Office, relating to the Registration of the Causes of Death. The greater part of it appeared in the Appendix to my Fourth Annual Report; and I have directed it to be published separately, for distribution among the Members of the Medical Profession who have to assign the cause of death. The Statistical Nosology, with the accompanying commentary, drawn up by Mr. Farr, will, I trust, be found practically useful by them, and contribute to secure the Registration of the causes of death on a precise and uniform plan throughout the kingdom.

To repeat the words of my Report, “ I hope that the registrars and informants will not fail to see the necessity of attending to the classification of fatal diseases, which has been framed for their use with much labour and after careful consideration; and that the members of the medical profession who have hitherto given their aid, will cordially assist in carrying out this national registration of the causes of death, as they alone are able to give a correct statement of the nature of the fatal diseases; and to them, more than to the members of any other profession, must be apparent the vast importance of thus collecting accurate materials for advancing the science of vital statistics.”

SECOND EDITION (1845.)

Part I. of this Edition is a reprint of the first, and contains also the Circulars and Instructions which have been since issued to registrars and medical practitioners. Many examples, and specimens of the returns already received, are interspersed under the various heads of the Statistical Nosology; which has in other respects been but little altered. A few suggestions as to the mode of filling up the certificates will be found [p. 260].

Part II. contains a letter addressed by me to the Coroners of the Kingdom, relative to the returns of the Causes of Death by Juries; and a classification, with observations on the returns, of deaths by violence.

GEORGE GRAHAM, *Registrar General.*

PART I.

THE two following circulars have been issued in the present year (1845).

I.—“CIRCULAR to PHYSICIANS, SURGEONS, and APOTHECARIES legally Qualified, practising Medicine in England.

“SIR,

General Register Office, 10th July, 1845.

“THE following Address was circulated among the Members of the Medical Profession in 1837, with an Explanatory Statement, which was printed in the introduction to the Statistical Nosology, of which you have, or may procure, a copy.

“We, the undersigned, President of the Royal College of Physicians, President of the Royal College of Surgeons, and Master of the Worshipful Society of Apothecaries, having authority from the several bodies whom we represent, *do resolve to fulfil the intentions of the Legislature in procuring a better Registration of the Causes of Death, being convinced that such an improved Registration cannot fail to lead to a more accurate Statistical Account of the prevalence of particular Diseases from time to time.*

“We pledge ourselves, therefore, to give in every instance which may fall under our care, an authentic name of the fatal disease.

“And we entreat all authorized Practitioners throughout the Country to follow our example, and adopt the same practice, and so assist in establishing a better Registration, in future, throughout England; for which purpose we invite them to attend to the subjoined Explanatory Statement, in which they will see set forth the provisions of the recent statute, and the means whereby the *IMPORTANT OBJECT* we have recommended may most effectually be attained.

(Signed)

“HENRY HALFORD,
“President of the Royal College of Physicians.

(Signed)

“ASTLEY COOPER,
“President of the Royal College of Surgeons.

(Signed)

“J. HINGESTON,
“Master of the Society of Apothecaries.”

May 1st, 1837.

“The following is an Extract from the ‘Explanatory Statement’ referred to:—

“*It is therefore, earnestly recommended, that every practising Member of any branch of the Medical Profession who*

“ may have been present at the death, or in attendance during
 “ the last illness of any Person, shall immediately after such
 “ death, place in the hands of such other Persons as were in
 “ attendance, of the occupier of the house in which the death
 “ occurred, or of some inmate who may probably be required
 “ to give information, *WRITTEN STATEMENTS* of the
 “ *CAUSE OF DEATH*, which such Persons may show to
 “ the Registrar, and give as their information on the subject.”

“ The recommendation in this statement has been generally adopted. But it has been represented to me by Medical men engaged in practice, who take an interest in the progress of medical science, that it would save them trouble, and tend very much to promote the accuracy and uniformity of the returns, if they were supplied with blank Forms of Certificates, to be filled up by them as occasion may require.

“ In compliance with this suggestion, I have requested the Registrar of the District in which you reside to supply you with a Book, which may be used when you return the Cause of the Death of any Person attended by you.

“ I shall feel obliged if you will observe the suggestions in the ‘Example,’ on the margin of the Certificate, and in the *Statistical Nosology*, relative to the mode of making the Return.

“ You are probably aware that, under 6 and 7 Wm. IV., c. 86, s. 25, the Medical attendant of the deceased person, in the last illness, is bound to give information, if applied to within eight days, with respect to the several particulars required to be registered; but if the Cause of Death be entered by you in a Certificate, as accurately as is possible in the present state of medical knowledge, some person of the family may be the informant, give the registrar your Certificate, and save you frequent calls and inquiries.

“ I need not dwell on the utility of accurate Returns of the Causes of Death, either in reference to public health, medical police, or medical science, which is based on extended observations; but I count on your cordial co-operation and aid in obtaining from English practitioners such Registers of the important facts in question, as may promote the public good, and may deserve the imitation of the other States of Europe.

“ I have the honour to be, Sir,

“ Your faithful Servant,

“ GEORGE GRAHAM, *Registrar General*.

“ To _____

“  A Copy of the ‘*Statistical Nosology*’ will be forwarded to you free of expense on a written application to the General Register Office, Somerset-House.”

II.—“ CIRCULAR.

“ SIR,

“ *General Register Office, 12th July, 1845.*

“ I AM aware of the difficulty which you sometimes experience in obtaining from Medical Practitioners written statements of the Cause of Death, for the purpose of being inserted in the Register Books. It is very desirable that the fatal Diseases should be accurately recorded, and I am anxious that every facility should be afforded you in obtaining correct Returns of the Cause of Death, certified in writing by the Medical attendants of the persons deceased.

“ Having this object in view, I have prepared Books for the use of Medical practitioners.

“ And I will thank you to take the trouble to give one of these Books, together with a Circular Letter (which I now transmit to you,) to every Person *resident in your District and practising Medicine*, who is a Member of the College of Physicians, of the British Colleges of Surgeons, or of the Apothecaries' Company, a Medical Graduate of an University, or an Apothecary legally qualified by having been in practice before 1815.

“ You will have the goodness to take every opportunity of reminding the inhabitants of your District, that in the case of a Death occurring in their families, a Certificate of the Cause of Death, in the printed Form, should be procured by them from the Medical man who was in attendance during the last illness of the deceased Person, and be delivered to you by the Informant, who signs the Entry in the Register Book; and the Entry when once commenced must be completed at the same time, in every case, no column being left blank with a view to the insertion of any particulars at a future period.

“ *Whenever the Death and its Cause have been certified by the Medical Attendant, you will in future mark such cases by writing ‘Certified’ under the ‘Cause of Death;’ and when no Certificate has been received by you from a Medical Attendant, you will write ‘Not Certified’ under the ‘Cause of Death’ in the Register Book, and in the copies which you transmit quarterly to this Office, as in the subjoined Examples. When the informant cannot state the ‘Cause of Death,’ write ‘Unknown,’ ‘Not Certified,’ in the column with that heading; and when you ascertain that no Medical Man was in attendance during the last illness, the fact of such non-attendance should be recorded, as in the third Example.*

“ If any qualified Medical Practitioner should refuse to fill up the Certificate of the Cause of Death, when requested to do so, I will thank you to let me know.

“ I have the honour to be Sir,

“ Your faithful Servant,

“ GEORGE GRAHAM, *Registrar-General.*

“ *To the Registrar of Births and Deaths ———.*

“EXAMPLES of the manner of distinguishing *Entries* in which the *Cause of Death* is ‘*Certified*,’ or is ‘*Not Certified*,’ by the *Medical Attendant* of the deceased Person.

Cause of Death.	Cause of Death.	Cause of Death.
Measles . . . 21 days. Pneumonia . . . 7 days.	Measles.	Small-pox.*
<i>Certified.</i>	<i>Not Certified.</i>	<i>Not Certified.</i> No Medical Attendant.

* If the disease cannot be ascertained, write “unknown” in the place of it.

The Registrars were requested on July 11th to fill up a return, with the following heading :—

III.—“The Names and Addresses of qualified Medical Men, practising Medicine or Surgery, and resident in the Registrar’s District of _____ on the 24th July, 1845.

Note.—“The Names of Medical Men who have retired from practice, of Medical Pupils, Students, or Assistants, and of Chemists and Druggists, not to be inserted. No Names of Quacks, or irregular Practitioners, to be enumerated in this List.

Names.	Addresses.

The names of between 10,000 and 11,000 medical practitioners were returned in compliance with this request; and books for certificates were forwarded to the Registrars for distribution among the qualified practitioners residing in their respective sub-districts. The example in the first leaf of the book is here annexed. (See p. 8.)

IV. Registrars are requested to forward to the Registrar-General the names, addresses, and medical titles of every person who may take up his residence and commence practice in their districts, in order that those qualified to practise may be duly supplied with books.

V.—EXAMPLE of the mode of filling up the
MEDICAL CERTIFICATE OF THE CAUSE OF DEATH.

CERTIFICATE OF CAUSE OF DEATH.

Name John Stevens

Aged 7 Years

Died on the 26th day of April, 1845.

last Birthday;—was attended by me, and

Primary Disease ^(a) .
Secondary Diseases ^(b) .
(if any) ^(c) .
^(d) .

Cause of Death.	Duration of Diseases.
Measles	21 days*
Pneumonia	7 days
[If any other diseases supervene, write them against ^(c) and ^(d) in the order of their appearance.]	

Have the goodness to state the primary and only the important secondary Diseases, with the time between the attacks and the death in hours, days, or years: Example—Measles 21 days, Pneumonia 7 days. Use, if convenient, the names in the first column of the Statistical Nosology. Add P. M. when a Post mortem inspection has taken place. If this Form should, by accident fall into the hands of any unqualified practitioner, he is recommended not to fill it up.

N.B.—Qualified practitioners who have not yet been supplied with a Copy of the Nosology may obtain it on application per post to the Registrar General.

Signed William Carter,

Professional Titles.
M.D.

* By this is to be understood, that the first evident symptoms of Measles appeared 21 days before death—the first evident symptoms of Pneumonia 7 days before death. The duration of other diseases is to be reckoned in the same way.

VI.—MEDICAL INFORMANTS.

The following is the explanatory statement referred to in the Circular of July 10th, 1845.

“ The recent Act for registering Births, Deaths and Marriages in England, presents an opportunity for obtaining that great *desideratum* in medical statistics, a more exact statement of *the causes of death*, in the case of every registered death throughout the whole of England and Wales, after the month of June next ensuing.

“ The Register-Books in which all deaths are to be registered after the last day of June, 1837, contain columns wherein may be inserted the *cause of death*, in juxtaposition with those other important illustrative circumstances, the *sex*, the *age*, and the *profession* or *calling* of the deceased person. Each Register-Book will also be assigned to a particular District of small extent, and will thus show in what part of the kingdom each death has occurred. If, therefore, the cause of death be correctly inserted, there will exist thenceforward public documents, from which may be derived a more accurate knowledge, not only of the comparative prevalence of various mortal diseases, as regards the whole of England and Wales, but also of the *localities* in which they respectively prevail, and the *sex*, *age*, and *condition of life* which each principally affects.

“ For the attainment of this object, it is necessary to ensure, as far as it is possible, the correct insertion of the ‘*cause of death*.’ It is obvious that on this subject the requisite information can seldom be given to the Registrar, except by the medical attendant of the deceased person; and that even if the Registrar be a medical practitioner (which in many instances will be the case), yet will he often be unable to ascertain the truth in this respect, if he is to depend solely on the reports of persons ignorant of medicine and of the names and nature of diseases; and it cannot be expected that from his own knowledge he will be able so far to correct their errors as to ensure a statement worthy of credit. The requisite information must therefore be supplied either *directly* or *indirectly* by the medical attendant of the deceased person; that is to say, if such medical attendant is not applied to by the Registrar, he must afford the requisite information to those other persons to whom the Registrar must apply.

“ The persons who, according to the Act for Registering Births, Deaths, and Marriages in England, must give information to the Registrar on being requested so to do, are ‘some person *present at the death*, or *in attendance* during the last illness;’ or ‘in case of the death, illness, inability, or default of all such persons, the *occupier* of the house or tenement; or, if the occupier be the person who shall have died, some *inmate* of the house or tenement in which such death shall have happened.’ It is also provided that, ‘for the purposes of this Act, the master or keeper of every gaol, prison, or house of correction, or work-house, hospital, or lunatic asylum, or public or charitable institution, shall be deemed the *occupier* thereof.’

“It is therefore earnestly recommended that every practising member of any branch of the medical profession who may have been present at the death, or in attendance during the last illness of any person, shall, immediately after such death, place in the hands of such other persons as were in attendance, of the occupier of the house in which the death occurred, or of some inmate who may probably be required to give information, *a written statement of the cause of death*, which such persons may show to the Registrar, and give as their information on that subject.

“It is desirable that such statement should be very short, the column in the Register-Book in which it is to be inserted being not more than sufficient for the insertion of about 10 words of moderate length.†

* * * * *

VII.—*Remarks from Appendix to First and to Fourth Report, on the Returns of the Causes of Death, before the Medical Certificate Books were issued.*

“The returns procured in the first year were, on the whole, tolerably satisfactory ; but, as might have been expected, some of the entries were incorrect ; the information in many instances had not been furnished directly by medical men, and had been furnished in ill-defined words, such as *decline, fit, inflammation, visceral disease, cold, long illness*. Local terms were employed, which appear to denote different diseases in different parts of the country. In many cases where inquests were held, no attempt had been made to inquire into the direct cause of death.

It appeared therefore necessary to suggest, as far as was practicable, the use of a uniform intelligible nomenclature. The following remarks were made in the Appendix to the First Report ; and a classification was adopted which, with some modification, has been followed in the subsequent Reports :—

“The advantages of a uniform statistical nomenclature, however imperfect, are so obvious, that it is surprising no attention has been paid to its enforcement in bills of mortality. Each disease has in many instances been denoted by three or four terms, and each term has been applied to as many different diseases ; vague, inconvenient names have been employed, or complications have been registered, instead of primary diseases. The nomenclature is of as much importance in this department of inquiry as weights and measures in the physical sciences, and should be settled without delay.

“In order to render the register as correct as possible, it is desirable that the cause of death should be directly certified in every instance by the medical attendant, who might either leave the certificate with the informant, or give it, upon application, to the Registrar. When the medical attendant is the informant, he will of course sign the register, as directed by the Act.

“The duration of the fatal disease should be stated, when known, in hours, days, or years ; which would supersede the words ‘sudden,’

† For the names recommended, see *NOSOLGY*.

'acute,' 'chronic,' &c., and in the end furnish many highly important results.

"The tabular arrangement exhibits the greater number of the causes of death, under names which will be found convenient in practice, and sufficiently precise for statistical purposes. The common English name has always been adopted, in conformity with the opinion expressed above, except in a few obvious instances; but where no one English name existed, and where the disease is popularly expressed by periphrasis, the common medical term has been adopted. Pneumonia is used, for instance, and not inflammation of the lungs. The Latin or English synonyme will render the tables intelligible, on the one hand, to foreigners, and on the other, to the general reader. If the causes of death were uniformly registered under the same names, and each cause of death designated by one word, it would increase the accuracy of the Abstract, and diminish the labour of framing it very considerably."*

"Further experience confirmed these remarks; and it was deemed desirable to revise the nomenclature, and to make such alterations and additions as the rapid progress of medical science required.

"The statistical nosology contains all the more common diseases.

"The notes, it is believed, will clear up some of the obscurities which present themselves in the registration of complicated causes of death, and will tend to preserve uniformity, and to prevent omissions. It is impossible to give directions to meet every case; but by examining the examples, and reflecting on the nature and the use of the information required, the informants can seldom be in much difficulty. It must be borne in mind that the column for the entry is little more than 'sufficient for the insertion of ten words;' for this reason, and to facilitate the labour of making the abstracts, the cause of death should be always stated *in as few words as possible*. *When three or four causes have concurred in producing death, it will generally be sufficient to write them under each other without connecting verbs or particles.*

"The DURATION OF THE ILLNESS, or the time elapsing between the manifestation of unequivocal symptoms of the fatal disease and the death, should be registered thus:—

EXAMPLES.

Cholera, 2 days.	Apoplexy, 20 hours.	Burns from the cap taking fire, 25 days.
---------------------	------------------------	--

"Where *poison has been the cause of death, the time which elapses between its administration and death* should be carefully registered:—†

EXAMPLES.

Laudanum, (Suicide) 8 hours.	Oxalic Acid, (Suicide) 20 minutes.	Arsenic, (Murder) 30 hours.
------------------------------------	--	-----------------------------------

†

* Appendix to the First Report.

† The quantity of the poison taken should also be stated, if it can possibly be ascertained.

‡ Appendix to the Fourth Report, p. 146. 8vo.

VIII.—*Suggestions to Medical Practitioners respecting the mode of returning the Causes of Death.*

(1.) State the causes of death in terms as precise and brief as possible ; and use, if convenient, the names recommended in the Nosology, for the sake of uniformity. The column of the Register Book for the entry will contain *about ten words*.

(2.) Write the causes of death in the order of their appearance, and not in the presumed order of their importance.

(3.) The duration of primary and secondary diseases in these returns will always be considered to imply the time intervening between the first appearance of well-marked characteristic symptoms—and death. Small-pox, scarlatina, erysipelas, typhus, and all febrile and inflammatory diseases should, however, be dated from the rigors and first symptoms, not from the later appearance of the eruptions, &c. The time in the certificate, opposite the primary disease, will therefore include the whole term of illness. Thus : “Scarlatina maligna, 21 days ; purulent infiltration, 7 days, (P.M.) ;” implies that the earliest symptoms of scarlatina occurred 21 days before death ; and that 7 days before death purulent infiltration was observed. So, “Hooping cough, 16 weeks ; paralysis of motor nerves, right side, 4 weeks ; pneumonia, 3 weeks,” is understood to mean that symptoms of the cough appeared 16 weeks, of the paralysis, 4 weeks, of the pneumonia 3 weeks before death. Confusion has been produced in some returns by inattention to this point.

No attempt should be made to guess the duration of *latent* stages of diseases ; but it will generally be possible to fix on a point of time near the access, when the patient had *no symptoms* of disease, and another, when the symptoms were unequivocal : if the disease be dated from the middle point of the intervening time, the results will be sufficiently accurate. The duration should be stated in *minutes* or *hours*, when the disease is fatal in less than 48 hours ; in days, in diseases of less than 50 days’ duration ; in weeks or years, for diseases of still longer duration. *Month* is an equivocal term, as a *measure* of time ; when used in the returns, it will be deemed the *twelfth* part of a year.

(4.) State, in fatal cases of small-pox, measles, scarlatina, typhus, rheumatism, mania, delirium tremens, apoplexy, and the like diseases, whether it be the second, third, &c. attack, whenever the patient has sustained more attacks than one. In ague, epilepsy, convulsive diseases, angina pectoris, syncope, and other maladies which occur in fits or paroxysms, date the illness from the first fit ; and add the duration of the last fatal fit ; thus : *epilepsy, 5 years ; last fit, 6 hours*.

(5.) Surgeons, in all cases of operations, should return (a) the primary disease or injury—(b) the operation—(c) the secondary diseases—such as erysipelas, purulent deposits, &c. ; and should state also the time from commencement of the primary disease—the time from the operation—and the time from the appearance of secondary disease, *reckoning in each instance to the death*.

(6.) It sometimes happens that the nature of the fatal disease cannot be discovered—even after a *post mortem* examination of all the organs—and still more frequently in the absence of an examination. *In such cases it is better to name one or more of the leading symptoms and peculiar appearances*, than to assign a specific cause on imperfect, inadequate evidence. P. M. should be added when the causes of death have been verified by a *post mortem* inspection.

The *examples* from the certificates received are not all given as specimens of perfect returns of the causes of death, but as illustrations of the manner in which the facts are viewed and stated in the present state of medical knowledge.

NOTE.—In order to be in a position to return the causes of death accurately, medical practitioners are earnestly recommended to keep brief memoranda of all the cases which they attend, in the simplest form, such as is given below. The private register of the medical practitioner would at the end of a few years be of incalculable interest to him: he might refer back to it for important information, transmit it to his sons or successors in practice, analyse the results of his experience; and, in conjunction with his brethren all over the country, would ultimately accumulate a vast series of materials, which could not fail to advance medical science.

Engaged in the practice of a laborious profession, medical men should not attempt too much at first; all cases should be noticed; but those facts should be chiefly recorded which are of an unequivocal nature, and that admit of precise statement, and comparison in respect to number, time, weight, and measure.

No.	Name of Patient, and Residence.	Sex.	Age (last Birth-day).	Profession; Habits.	Diseases.		Dates of Important Facts in the Case; and of the resulting Recovery or Death.
					Primary and Secondary.	Date of their Appearance.	
1*	John Jones, 7, Drury-lane.	M.	7	A day scholar; (father a master tailor).	Measles; Pneumonia.	March 5 March 12	Patient first seen <i>March 9</i> ; the eruption of measles then visible; appeared on the 8th; cough, rust-coloured sputa, crepitation, 12th; left lung consolidated, 14th; last seen, <i>March 19th</i> ; <i>died March 20th</i> . P. mortem: left lung hepatized; pleura adherent.

* The Number will refer to the prescription book for treatment.

The importance of instituting *post mortem* examinations very generally, cannot be too strongly urged. It is impossible to calculate how much suffering and untimely death are occasioned by depriving physicians and surgeons of the information derivable from this source. In ordinary cases no attempt is made to preserve the body from corruption, when life is extinct; and the examination by medical men of the state of the internal structure, instead of accelerating decay, may be made, by embalming, a means of preserving the frame from decomposition; if it were not rather desirable and more in consonance with the best feelings—that the elements—water, air, carbon, and the salts—of which the earthly tenement is composed, should be restored as soon as possible to their free state—to be again re-organised and re-animated.

IX.—STATISTICAL NOSOLOGY.*

(As this list has been drawn up principally for the use of those who return the *causes of death*—many diseases are omitted; but the generic names of cutaneous diseases, and of others which are not fatal, have been introduced to indicate the place which they should occupy, if the nosology should be employed in classifying cases of sickness.)

The names which it is recommended should be used in the registers are in the FIRST COLUMN; the names opposite to them are synonyms, which may be used at the discretion of the medical informant, if considered more appropriate in the particular case. The utility, however, of adhering as much as possible to uniformity will be obvious, and has already been pointed out.

NOTE.—In entering and copying the causes of death, the REGISTRAR should, if possible, write each disease, and its duration, in a separate line.

(1.)—ZYMOTIC DISEASES.

This class comprises diseases which have been observed to be epidemic, endemic, or contagious. The blood is probably, in the greater number of them, the primary seat of disease: and they may be considered by hypothesis, the results of specific poisons of organic origin, either derived from without, or generated within the body.

(Hippocrates, Sydenham, Sprengel, Ozanam, Villermé, Williams, Liebig)

1 a SMALL POX, — days; (1st or 2nd attack.)	never vaccinated.
(Petechial, confluent, semiconfluent, distinct, varicelloid.)	; vaccinated — <i>years</i> , or — <i>days</i> , (before eruption of s. p.); effect <i>failed or imperfect.</i>
	; vaccinated — <i>years</i> , or — <i>days</i> ; marks left.
	; vaccinated — <i>years</i> , or — <i>days</i> ; took effect, but no marks.
	; not known whether vaccinated or not.

Pneumonia is often a fatal complication of small-pox and measles; such cases should be registered, "small-pox, — days; pneumonia, — days," &c.
(Dr. Gregory, Mr. Celey.)†

* For a statement of the principles upon which this Nosology has been drawn up, and some suggestions as to further improvements in pathological nomenclature, see pp. 186—216, of the Registrar General's Fourth Report, 8vo edition, which may be procured at Longman's.

† The writers whose names are cited must not be held responsible for the opinions expressed in the notes. They are referred to either because they have given summaries of the present state, or have extended the domain of our knowledge by original investigations. They are of course but a small number of the many eminent contributors to medical science who have adorned the present age; but in their writings will be found the prevailing medical opinions, which will for some years guide the medical practitioners of this country in returning the causes of death. It has not been thought necessary to refer to the particular works; but where monographs have not been published, articles by the writers on the particular subjects will be found in the *Library of Medicine*, the *Cyclopædias of Medicine*,

Names to be used.

b CHICKEN-POX.

Varicella.

Ex.—*Small-pox*, — days (1st attack); (never vaccinated).

Small-pox, 14 days (2nd attack); (never vaccinated).

Small-pox, 17 days; *pleurisy*, 1 day (p. m.); (not known whether vaccinated.)

Small-pox, 21 days; *pneumonia*, 7 days; (not vaccinated.)

Small-pox, confluent, 12th day; (vaccination never attempted.)

Small-pox, (petechial,) 9 days; (vaccinated young, 2 good cicatrices.)

Small-pox, 9 days; *laryngitis*, 1 day; (vaccinated only 4 days before eruption.)

Chicken-pox, 8 days; *hooping-cough*, 6 days.

2 MILIARIA.

Miliary fever.

3 MEASLES.

Rubeola; morbilli.

Rubeola maligna may be distinguished by the epithet "malignant;" so also may *Scarlatina maligna*.

Ex.—*Measles*, 14 days; *diarrhœa*, 6 days.

Measles, 14 days; *phlegmon of arm—gangrene*, 7 days.

Measles, 14 days; *purpura*, 1 day.

Measles, 13 days; *phlegmonous erysipelas*, 6 days.

Measles, 9 days; *bronchitis*, 7 days; *pneumonia*, 3 days; *convulsions*, 1 day.

Measles, 6 days; *scarlatina*, 3 days; *pneumonia*, 2 days; *convulsions*, 1 day.

Bronchitis with measles; the eruption did not appear till immediately after death.

Other secondary diseases are dropsy, croup, noma.

4 *a* SCARLATINA.

Scarlet fever; rosalia.

b SCARLATINA, followed by dropsy.

c PUTRID SORE THROAT

Angina maligna, (Dr. Tweedie.)

(Scarlatina.)

Ex.—*Scarlatina*, 39 days; *dropsy*, 24 days; *peritonitis*, 14 days, (p. m.)

Scarlatina maligna, 5 days.

Scarlatina, 4 weeks; *acute pericarditis*, 24 hours.

Scarlatina maligna, 21 days; *purulent infiltration*, 7 days (p. m.)

Scarlatina, 7 weeks; *pneumonia* (duration unknown); *tubercles in lungs*, (p. m.)

Scarlatina, 4 weeks; *dropsy*, 5 days; *angina maligna*, 2 days.

Scarlatina maligna, 7 days; *putrid sore throat*, 3 days.

Scarlatina, 33 days before death; *anasarca renalis*, 21 days; *pleuritis*, *pericarditis*, *peritonitis*, (p. m.)

Anatomy, and *Surgery*, the *Transactions of Medical Societies*, or in the *Medical Journals*. The various nosologies, Cooper and Copland's Dictionaries, the works on the Practice of Physic by Mason Good, Craigie, Bright, and Addison, and the excellent Lectures of Dr. Watson might also be named. As the object has been to refer to writings easily accessible to every medical practitioner who may have occasion to return the causes of death, the names of few foreign or ancient writers have been cited. This is mentioned that the omission might not be misinterpreted. The writers named at the beginning of each class have generally treated of the diseases of that class.

Names to be used.

5 DIPHThERIA.

Diphtheritis; diphtherite.

This specific inflammation, with the exudation of coagulable lymph, is frequently called *Angina membranacea*, and *ulcerated sore throat*. There are neither true eschars nor ulcers. (*Bretonneau*.)

Ex.—*Diphtheria*, 21 days, (p. m.) *Diphtheria*, 10 days, (p.m.)

6 MUMPS.

Cynanche parotidæa; parotitis;
parotia.

7 HOOPING-COUGH.

Pertussis; chin-cough.

Ex.—*Hooping-cough*, 21 days; *remitting fever*, 10 days.

Hooping-cough, 21 days; *pneumonia*, 7 days.

Hooping-cough, 4 months; *paralysis of (motor nerves) right side*, 1 month; *pneumonia*, 3 weeks.

Hooping-cough, *struma*.

Hooping-cough and teething, 6 weeks; *pneumonia*, 5 weeks;
chicken-pox, 10 days; *noma*, 5 days.

8 CROUP.

Cynanche trachealis.

Whenever croup is a secondary disease, or is complicated with diphtheria (5)—it should be so registered.

Ex.—*Croup*, 48 hours.

Croup, 7 days.

Croup, 54 hours.

9 THRUSH.

Aphtha; lily.

Aphtha, with vesicles, ulcers of the follicles, or a concrete mucous secretion, is included in this entry. The latter form is called *muguet* in France, and lily, the corresponding English name, in some parts of this country. Aphtha occurs in the latter stages of chronic diseases, to which and to "thrush," the death must be referred.

Ex.—*Aphtha*, 7 days.

10 DIARRHŒA.

Looseness; purging; bowel complaint; lientery. (*Latham*.)

When the diarrhœa occurs in the course of typhus, of consumption, or of other diseases, it should be so registered.

Ex.—*Diarrhœa*, 5 days; *convulsions*, 8 hours.

Diarrhœa, 30 days; *senile gangrene (haunch)*, 16 days.

11 DYSENTERY.

Dysentery; flux; bloody flux;
(*Johnson, Martin*.)

Ex.—*Dysentery*, 14 days.

Dysentery, 6 weeks (*ulc. of colon and rectum*); *gangrene of nates*, 4 days.

Dysentery, (*endemic*), 24 days; *convulsions*, (*2nd fit*), 24 hours (p. m.)

12 CHOLERA.

Cholera Asiatica; epidemic cholera; cholera biliosa; cholera infantum; cholera morbus; cholerine.

Ex.—*Cholera—low fever*, 15 days.

Names to be used.

13 INFLUENZA.

Catarrhus epidemicus; epidemic
catarrh. (*Dr. Holland.*)

Ex.—*Influenza; bronchitis, 6 months.*

Influenza; enteritis, 2 months.

14 a SCURVY.

Scorbutus. (*Dr. Budd.*)

Scurvy is characterized by spongy, livid gums; it is confounded by the ignorant with the *scurfy* eruptions of children.

b PURPURA.

Purpura hæmorrhagica; purples.

Ex.—*Purpura, — days, (exhaustion after great fatigue from travelling.)*

15 AGUE.

Febris intermittens; intermittent
fever.

It should be stated whether the ague was quotidian, tertian, or quartan; and the complications, without which it would be rarely fatal, should be added.

Ex.—*Ague—dysentery, 8 days, (p. m.)*

16 a REMITTENT FEVER.

Febris remittens.

Not to be applied to cases sometimes called “infantile remittent fever,” (see 80,) nor to any but cases of the genuine remittent fever so prevalent in the Tropics, and rare in England.

Ex.—*Remittent fever, 3 weeks; intestinal hæmorrhage, 18 hours.*

b YELLOW FEVER.

Typhus icterodes.

Probably an aggravated form of remittent fever.

Ex.—*Yellow fever, 6 days; black vomit 2 days before death.*

17 TYPHUS.

Febris typhoides; dothinenteria.

Two forms have been observed; the one (*dothinenteria*) with ulceration of the glands of Peyer; the other without this character. Some writers distinguish “gastric fever,” “nervous fever,” “synochus,” “synocha,” “jail fever,” “camp fever.” These terms may be employed at the discretion of the informant, but the common distinction of the varieties of fatal typhus is not founded on essential characters. Care should be taken not to confound idiopathic inflammation of the lungs, brain, or mucous membranes with typhus, which is a distinct well-marked disease. (*Louis; Christison; Southwood Smith.*)

The more important complications of typhus, such as erysipelas, meningia (see note 71 b), pneumonia, perforation of the intestine, and peritonitis, should be registered; the existence of petechiæ, rose-spots, ulcers of the glands of Peyer, glandular disorganization, may also be noticed in this important disease.

Ex.—*Typhus, 21 days; congestion of brain, 14 days.*

Typhus, 20 days; diarrhœa, 13 days, (ulceration of Peyer's glands, p. m.)

Typhus; hemiplegia, terminating in apoplexy, 14 days.

Typhus, — days; serous effusion in ventricles of brain.

Typhus, 42 days; dropsy, 7 days.

Typhus, encephalia, 14 days; apoplexy, — days.

Typhus (petechiæ), 14 days.

Typhus, 16 days; pneumonia (right), 6 days; ulcer of ilium, (p. m.) (inadequately fed).

Typhus (maculated), 11 days; left lung much enlarged, (p. m.)

Typhus, 3 weeks; noma (both cheeks), 10 days.

Names to be used.

- 18 PUERPERAL FEVER OR METRIA. Uterine phlebitis; puerperal peritonitis; childbed fever, 104.
(*Dr. R. Lee; Dr. Ferguson.*)

Metria has been derived from *μητρα*, the womb—(root *μητηρ*, mother).

- 19 PESTIS. Plague

Was prevalent in England down to the close of the 17th century. 68,956 deaths were reported in the London bills of mortality, A.D. 1665. Only two cases were reported in 1679. It then merged in "spotted fever," or "ague and fever," and has now disappeared. May not isolated cases, however, occur sporadically, and be confounded with typhus?

- 20 RHEUMATIC FEVER. Rheumatismus; rheumatism
(acute).

Rheumatism is rarely fatal except when it is acute and attacks the membranes of the heart or brain; such cases should be registered "Rheumatic fever — days; pericarditis — days." "Rheumatic fever; meningitis — days." &c. See "Chronic rheumatism," 106. (*Dr. Bright; Dr. Macleod.*)

Ex.—*Rheumatic fever, 12 days; meningitis, 8 hours.*

Rheumatic fever, 2 months; tracheitis, 4 days.

Rheumatic fever; disease of heart, 2 years.

Rheumatic fever, 10 days; jaundice, 2 days.

- 21 a SYPHILIS (Primary). Lues venerea; venereal disease;
chancre.

The particular form of the primary and secondary disease, as well as complications, should be specified. Phagedæna, rupia, or the immediate cause of death, should be especially noted.

- b SYPHILIS (Secondary) (*Hunter; Mr. Parker, M.
Ricord, Mr. Acton.*)

Ex.—*Syphilis, 3 months; convulsions.*

Syphilis, consumption, 12 months.

Syphilis, 21 months; phthisis, 8 months, (tubercles in lungs, p. m.)

Syphilitic ulcers on scalp, some months.

Syphilis; ulceration of cartilage of larynx, — weeks.

c GONORRHOEA.

- 22 a ERYSIPELAS. Ignis sacer; rose; St. Anthony's
fire.

Ex.—*Erysipelas of the head, 12 days, (idiopathic.)*

Erysipelas, 23 days; bronchitis, 11 hours.

*Erysipelas in , 14 days; suppuration in knee-joints, with
absorption of matter, 4 days.*

Erysipelas of head and face, 3 weeks; arachnitis and effusion.

It should have been stated in the last and the preceding cases, whether the erysipelas was traumatic; and if so, what were the nature and cause of the wound.

- b TRAUMATIC ERYSIPELAS.

Erysipelas is either simple, phlegmonous, or œdematous. It occurs occasionally at the close or in the course of other maladies, to which *and* to erysipelas, the death should in such cases be referred. Erysipelas frequently follows wounds and surgical operations. The operation, as well as the disease for which it was performed, should be registered thus:—"Scrofulous disease of ankle joint,—amputation of the leg,—erysipelas." See 145.

Names to be used.

c ERYTHEMA.

This rash or superficial blush of the skin is sometimes confounded with erysipelas. It is frequently symptomatic of disorders of the digestive organs.

23 *a* NECUSIA.

A disease produced by puncture or infection in dissection; inoculation with the matter of a dead body; cellulitis venenata. (*Dr. Duncan; Mr. Stafford; Dr. Williams.*)

Necusia has been derived from *νεκρὸς*, the dead body.

b MALIGNANT PUSTULE.

Pustule maligne.

Occurs sometimes in butchers, or others who have handled the carcasses of infected animals.

c HOSPITAL GANGRENE.

See 39. (*Butter.*)

d TETANUS.

See 53.

e MILDEW MORTIFICATION.

Gangræna ustilaginea; ergotism.

24 GLANDERS.

Equinia; farcinoma.

It may be stated how the disease was contracted. (*Elliotson; Rayer.*)

25 HYDROPHOBIA.

Lyssa; rabies.

The time which elapses between the bite of the rabid animal and the first symptoms of disease,—between the symptoms and the death of the patient, should be mentioned. If spontaneous cases ever occur, and prove fatal, they should be carefully distinguished.

Ex.—*Hydrophobia*, 4 days, (*bit by a rabid dog 5 months before.*)

26 PORRIGO.

Tinea; favus; scald-head; ringworm of the scalp, (*Plumbe, Phillips, Gruby.*)

27 SCABIES.

Itch, psora. (*Raspail, E. Wilson.*)

26, 27, are not fatal diseases, but belong to this class. The secondary diseases or complications should be always stated.

(2)—SPORADIC DISEASES OF UNCERTAIN OR VARIABLE SEAT.

This class consists of diseases of variable seat, or diseases in which the nature of the morbid product or action is, as in cancer, of more importance than the part affected.

(*Meckel, Andral, Carswell, Craveilher, Craigie.*)

28 HÆMORRHAGE.

Bleeding; rupture or bursting of a blood vessel; hæmorrhagia.

If the bleeding be from wounded arteries or veins, it should be stated. It is commonly supposed that the discharge of blood from the lungs and other internal organs is, like external hæmorrhage, from an opened blood-vessel. This is an error. Hæmorrhage from the rupture of a blood-vessel is rare. The blood is exhaled from the capillary system of internal organs. Death should be ascribed to rupture of a blood-vessel only when the rupture has been detected; and it will then be more convenient to use "laceration or bursting of an artery or vein," as the case may be, naming the particular vessel.

Names to be used.

When the hæmorrhage arises from the bursting of an aneurismal sac, or of varicose veins, the entry should be "Aneurism burst."—"Varicose vein burst."

Fatal hæmorrhage occurs in fevers, in scurvy, and in purpura, of which, and some specific alteration in the blood, it is then the result. The cases should be registered "Scurvy with hæmorrhage from the gums," &c. &c.

Hæmorrhage is the frequent result of morbid alterations or deposits in the tissues, as in consumption and cancer. It is here a secondary malady.

Hæmorrhage is also produced by obstructions of the venous circulation, as in some diseases of the heart and liver.

These remarks apply generally to epistaxis, hæmoptysis, hæmatemesis, melæna, hæmorrhoids, hæmaturia (which are named distinct diseases), as well as to other hæmorrhages. When hæmorrhage takes place in the head, it causes apoplexy and paralysis. (*Dr. Watson.*)

a EPISTAXIS.

Bleeding from the nose.

Ex.—*Epistaxis, 2 months (hæmorrhagic spots in brain and heart.)*

b HÆMOPTYSIS.

Discharge of blood (generally red) from the lungs by coughing; spitting of blood.

Ex.—*Hæmorrhage from lungs, 7 days.*

Hæmoptysis, 4 days, (tubercles in lungs, p. m.)

Measles, 14 days; ruptured vessel, 3 minutes. (What vessel, was not stated.)

c HÆMATEMESIS.

Vomiting of blood (generally dark).

Ex.—*Hæmatemesis, 2 days.*

Hæmatemesis; scirrhus of pylorus, 20 years.

Hæmatemesis 15 years; last attack, 3 days.

d MELÆNA.

Discharge of black blood by stool from the intestines.

Ex.—*Hæmorrhage from intestines after a violent fit of coughing, 10 hours, (a male, age 49.)*

e HÆMORRHOIS.

Bleeding piles.

f HÆMATURIA.

Discharge of blood from the urethra (frequently from stone in the kidneys); bloody urine.

Ex.—*Hæmaturia, 5 years; liver disease, 6 months.*

g MENORRHAGIA.

Uterine hæmorrhage (*not in nor after delivery*).

Ex.—*Menorrhagia, 5 months; jaundice, 4 months.*

Cancer of uterus; menorrhagia, 1 year.

h FLOODING.

In childbirth or abortion, see 104.

Ex.—*Hæmorrhage in 8th month of pregnancy, 19 days.*

29 *a* ANÆMIA.

Bloodlessness; sanguinis defectus.

b CHLOROSIS.

Green sickness.

30 DROPSY.

Hydrops; anasarca; œdema.

For the acute dropsy following scarlatina, see "Scarlatina." Whenever there is "dropsy," it should be registered, and referred to the heart, lung, or kidney diseases, if they be positively proved to exist either by the symptoms or *post mortem* examination. Where there is a doubt about the existence of the organic disease, "dropsy" alone should be used. Dropsy occurs in

Names to be used.

chlorosis, after intermittents, in scurvy, and in the impoverished state of blood produced by inadequate nourishment; which should always in such cases be registered as well as the dropsy. When partial dropsy occurs from the obstruction of a vein or veins, it should be so stated. The effusions in pleurisy, pericarditis, and other inflammations of serous membranes should be registered "Pleurisy with serous effusion," &c. A distinct name is, however, given to this form of pleurisy,—“empyema.” “Beriberi” is allied to dropsy. (*Dr. Wells, Dr. Blackall, Dr. Watson.*)

Ex.—*Anasarca, great dilatation and hypertrophy of heart, (p.m.) Dropsy, 2 years; erysipelas, 9 days.*

a DROPSY (acute). Inflammatory dropsy; febrile dropsy.

b DROPSY, with Granular Disease of Kidneys. (95).

c HEART DISEASE, with Dropsy. (59 and 60).

d HYDROTHORAX. Water on the chest. See “Empyema.” (70 *b*.)

Is generally a symptom of heart disease, which should be registered.

e HYDROPERICARDIUM. Dropsy of the heart sac; water in the pericardium, see note *d*.

f ASCITES. Dropsy in the belly

The ascites arising from a peculiar disease (cirrhosis) of the liver, or from chronic peritonitis, should be carefully distinguished from general dropsy, which involves the abdomen with other parts of the system. See 90.

g HYDROCELE. Water in the tunica albuginea.

A troublesome disease, but can scarcely be a cause of death, except when an operation is performed for its removal.

h OVARIAN DROPSY. Hydrops ovarii. (*Dr. Seymour.*)

Ex.—*Ovarian dropsy, 3 months.*

i CHRONIC HYDROCEPHALUS.

This term should be applied exclusively to the chronic dropsy of the head. (See 46.)

Ex.—*Congenital hydrocephalus, (age 8 days.)*

31 *a* ABSCESS. Abscessus.

b PURULENT DEPOSIT. Purulent infiltration; phlebitis.

Pus is deposited in the serous sacs, the brain, the lungs, the liver, and other parts of the body after inflammation of the veins, surgical operations, childbirth, erysipelas, typhus, scarlatina, &c. The diseases which appear to have led to the formation of the deposits should be registered.

Abscess is a frequent termination of local inflammations; to which and the abscess, the death, in such cases, must be ascribed. *Psoas abscess, lumbar abscess*, and abscesses which form without the visible signs of inflammation, are generally scrofulous affections of the joints and glands.

Abscess under omentum; effusion into peritoneum; peritonitis, 10 days, (p.m.)

32 *a* ULCER OF—* Ulcus.

b CRIES OF—* Ulcer of the bone.

c FISTULA IN—*

Ex.—*Fistula, — years.*

* The part to be stated here.

Names to be used.

33 (*Tuberculous Disease*).

a SCROFULA,* or STRUMA Evil; king's evil; cretinism.
(*Alison, Carswell, Lugol, Baudelocque, B. Phillips.*)

* The *parts* affected with the scrofulous disease should be added; and Struma or "Scrofula" alone should scarcely ever be used.

b SCROFULOUS, or STRUMOUS Inflammation of the glands; adenitis; disease of the joints.
INFLAMMATION OF—

EX.—*Scrofulous inflammation of hip-joint; effusion of pus in peritoneum.*

c SCROFULOUS, or STRUMOUS
ABSCESS OF—

EX.—*Scrofulous abscess, 2 years; dysentery, 14 days.*

d SCROFULOUS, or STRUMOUS
ULCER OF—

e PSOAS ABSCESS. Abscessus psoanus; abscessus lumbalis.

EX.—*Caries of spine, 2 years; lumbar abscess, 6 months; diarrhœa, 2 months.*

Scrofulous disease of hip-joint, 5 years.

Scrofula; psoas abscess, 12 months.

Scrofulous disease of spine, 6 years; dropsy, 10 weeks.

Psoas abscess, 2 years.

f TABES MESENTERICA. Mesenteric disease; marasmus.

EX.—*Tabes mesenterica, 3 months; (without breast milk last month.)*

Mesenteric disease, 2 months; diarrhœa, 2 weeks.

g PHTHISIS. See No. 73. Phthisis pulmonalis; consumption; tubercular phthisis.

In *phthisis* the lungs are the most important seat of the deposit and the disease; which are not, however, confined to those organs, but also affect the mesenteric glands, the liver, the kidneys, the mucous and the serous membranes. Perforation of the intestine, or of the pleura, is sometimes the immediate cause of death in phthisis. Such cases should be registered "Phthisis; perforation of the ilium," "Phthisis, pneumothorax," &c. All the important secondary diseases in phthisis should be registered in a similar manner. (*Bayle, Laennec, Louis, Sir James Clark.*)

EX.—*Scrofulous disease of ankle joint, 18 months; phthisis, 4 months.*

Phthisis and tubercles in mesentery, 2 years; peritonitis, 12 hours.

Phthisis, 2 years: hæmoptysis.

Phthisis, 2½ years; peritonitis, 18 hours.

Phthisis, large cavities in left lung especially; slight hæmoptysis, — months.

h RICKETS. Rachitis.

EX.—*Rickets, 3½ years; congestion of brain, 10 hours.*

i BRONCHOCELE. Wen; goitre; Derbyshire neck.

Rickets and *bronchocele* have generally been referred to scrofula, but they are not perhaps essentially tuberculous diseases, though the persons in whom they occur are of a scrofulous habit.

Names to be used.

j HYDROCEPHALUS.

Can often be traced to tubercles in the meninges of the brain.] [(See 30 and 46).]

34 GOUT.

Podagra.

The *part* attacked by gout may be registered.

Ex.—*Gout, 5 months; ascites, 1 month.*

Gout and gradual decay, (confined to bed 13 months,) age 74.

Gout; asthma, 12 months.

Gout, retrocedent, attacking the heart, 22 days.

35 *a* CANCER (Encephaloid).—

Fungus hæmatodes; soft cancer; osteosarcoma; carcinus.

b CANCER (Scirrhus).—

Stone cancer; scirrhoma; carcinus.

c CANCER (Colloid).—

Gum cancer; carcinoma alveolare.

Add “Chimney sweeps” after the cancer of the scrotum in this class of persons. Many other varieties of cancer, or of carcinoma, have been described; and different names have been applied to each variety. The three species (*Walshe*) should be distinguished; and the *parts affected* be added in Latin, thus; “Cancer uteri.” When death follows an operation for the removal of cancer, it should be so registered. (*Carswell, Mueller, Dr. Walshe.*)

Ex.—*Cancer in groin, 2 years; cholera, 3 days; dysentery, (epidemic,) 2 days, (p. m.)*

Cancer (soft) of brain; symptoms obscure, 12 months, evident last 3 months, (p. m.)

Cancer uteri, 2 years.

In cases of this kind, the *Latin* names of parts should be employed.

Cancer mammæ, 17 months; pleura and lung, time uncertain.

Cancer uteri, 7 months; uterine hæmorrhage, 5 months; scirrhus of pylorus, 4 months, (p. m.)

Cancer uteri, 1 year; scirrhus ventriculi, 6 years.

Cancer of pylorus, (complained 10 weeks;) ascites 4 or 5 weeks.

Cancer of peritoneum.

Cancer cervicis uteri, some years; ascites, 6 months.

Scirrhus of pylorus, — years; perforation, peritonitis, — days, (p. m.)

Cancer renis, 2 years; scirrhus of tongue, 6½ months.

Cancer penis, 10 months; right groin, 5 months, left, 3 months.

Fungus hæmatodes in pancreas, heart, lungs, liver, kidneys, and surface of stomach (p. m.), noticed 3 months.

Gum cancer, ilium, &c., — weeks.

36 MELANOSIS.

Tumours of black colouring matter.

The spurious melanosis occurring in colliers, &c., is a peculiar disease of the lungs. (*Carswell.*)

37 *a* HYPERTROPHY OF—

Hypertrophia; enlargement.

(Add the respective organs.)

b TUMOUR (ADIPOSE) OF—

c TUMOUR (FIBROUS) OF—

Fibrous and adipose tumours are the principal enlargements which cannot be referred to the preceding heads. Fatal tumours are commonly of a malignant character. (*Dr. Warren.*)

Names to be used.

Ex.—*Fibrous tumour of uterus and ovary.*

Tumour of brain suppurated; epilepsy, — days.

d POLYPUS OF—

Ex.—*Polypus uteri, 7 months.*

38 *a* ATROPHY OF—

Atrophia.

b EMACIATION.

Decline; wasting; marasmus.

The part affected to be added after atrophy, which should only be applied to *local* defects of nutrition. When the emaciation is general, it is usually the result of tuberculous or of some chronic disease. It is then a mere symptom. The same remark will apply to general debility. (42.)

Ex.—*Marasmus, 10 weeks; emaciation and debility (age 9 months.)*

39 MORTIFICATION.

Gangræna; sphacelus; sloughing.

a RAMOLISSEMENT OF—

Softening.

b DRY GANGRENE OF—

Gangræna senilis.

c HOSPITAL GANGRENE OF—

(23). Gangræna nosocomialis.

d NOMA.

Water-canker; gangræna oris;
cancrum oris.

e FROST-BITTEN IN—

Gangrene from cold (see 136).

f TRAUMATIC GANGRENE OF—

Gangrene from injuries (see Violent deaths, 144, 145).

g BEDSORE.

Ex.—*Gangrene of right lung, 3 weeks; pneumonia (left lung), a few hours, (p. m.)*

Gastro-enteritis, 21 days; gangrene of fingers of left hand, 24 days.

Dry gangrene of toes, 10 days.

Mortification of integuments of back, — days.

It was not stated in this case, as it should have been, how the mortification was caused.

Noma (mouth), — days, (a child of 2 years.)

Noma (umbilicus), — days.

Dysentery, 9 months; noma, 14 days, (p. m.)

Noma, extending through both cheeks, — days.

Noma through upper lip, — days.

Noma through lower lip, — days.

Under "Mortification" should be registered all the remaining varieties. (Carswell.)

If mortification occur after hernia, an operation, a blister, &c., it should be registered "Hernia, mortification of the intestine," &c.

40 CATACAUSIS.

Spontaneous combustion.

The circumstances in which it appears to have happened should be briefly stated.

41 OLD AGE.

Senectus; natural decay; natural debility from age; climacteric disease. (*Sir Henry Hallford.*)

There is reason to believe that many of the diseases of the aged are not detected; and that the terms, "Old Age," and "Natural Decay," are often incorrectly assigned as causes of death. Pneumonia is a very frequent cause of death in the aged; and can be detected by the physical signs, though its other symptoms may be latent.

Names to be used.

42 *a* DEBILITY (from Birth).

Debilitas. Low vitality, low vital tenacity. (38) (47).

Has been generally used to designate the unknown cause of the deaths occurring shortly after birth, or perhaps more frequently from premature birth.

b PREMATURE BIRTH.

The mortality of the child (fœtus) in utero is probably very great (*Dr. Granville*); but as little is known of the diseases of intra-uterine life, "premature birth" should be employed in entering every case of death occurring between the seventh and ninth months of pregnancy. "Premature birth" must be the result of the mother's or the child's malady or injury, which should be written, if known, under "Premature Birth."

Ex.—*Premature birth in 7th month; convulsions.*

Premature birth in 6th month.

43 MALFORMATION.

(*Geoffroy St. Hilaire.*)

a CYANOSIS.

Blue disease.

b SPINA BIFIDA.

c ANUS IMPERFORATUS, &c. Imperforate anus.

Ex.—*Spina bifida, 8 weeks; hydrocephalus, 5 weeks.*

Nonclosure of foramen ovale; also a communication between the ventricles, (age 4 years,) (p. m.)

Congenital constriction of larynx, (age 3 months,) (p. m.)

Hæmorrhage from different parts of the body; the skin imperfect from birth, (a male, age 6 weeks.)

"Imperfectly developed" is an ambiguous expression, and should be avoided.

44 WORMS.

Vermes; verminatio.

a HYDATIDS.

Acephalocystis endogena; A. multifida; echinococcus hominis.

b TAPE WORM.

Tænia solium.

c STRONGILUS GIGAS.

d ASCARIS LUMBRICOIDES.

Round worm.

e ASCARIS VERMICULARIS.

Thread worm.

Other parasitic animals, and indeed those above named, though frequent complications of infantile diseases, rarely prove fatal. When such curious species as the *Trichina Spiralis* are discovered, they should be mentioned after the fatal disease. (*Dr. Arthur Farre.*)

(3.)—SPORADIC DISEASES OF SPECIAL SYSTEMS AND ORGANS.

This class consists of Congestions, Inflammations, the results of Inflammations in certain parts, and Mechanical or Functional Diseases.

NERVOUS SYSTEM.

(*Abercrombie, Marshall Hall.*)

45 *a* MENINGITIS.

Inflammation of the membranes of the brain,—the pia mater, or arachnoid; arachnitis; phrenitis; phrensy; brain fever.

Ex.—*Phrenitis, 8 days.*

Names to be used.

b ENCEPHALITIS.

Inflammation of the substance of the brain; cerebritis; cerebellitis; ramolissement or *necrencephalus* (one form of it is inflammatory.)

Ex.—*Chronic cerebritis, with general paralysis, 12 months.*

Apoplexy—softening of brain, 7 months.

Softening of brain; ossification of arteries, — months.

Softening of central parts of brain; convulsions, — days.

c CEPHALITIS.

“Cephalitis” may be employed to designate the inflammation in the head when inflammation affects both the membranes and the substance of the brain to nearly an equal extent, or when the diagnosis is uncertain. (*Rostan, Lallemand.*)

Ex.—*Cephalitis, about 50 hours; serous effusion, 3½ hours.*

Arachnitis, — days; ulceration of Peyer’s glands, (p. m.) (a child of 8 months.)

d MYELITIS.

Inflammation of the spinal marrow.

State whether with or without ramolissement.

46 HYDROCEPHALUS (Acute).

Water on the brain; tubercular meningitis. (*Rufz, P. H. Green, 33, 30.*)

Inflammation of the central parts of the brain (*Abercrombie*).

Ex.—*Tubercles in brain, about 2 months; hydrocephalus, 14 days, (p. m.)*

47 APOPLEXY.

Apoplexia; apoplectic fit; stroke.

When it is a second or third attack, add 2nd, 3d, &c. attack, as the case may be; and state how long ago the first attack occurred. The same remark will apply to paralysis, delirium tremens, chorea, mania, epilepsy, convulsions, neuralgia.

Sudden death is frequently referred to apoplexy upon no satisfactory evidence; while effusion of blood into the arachnoid of infants is often overlooked, if we are to admit, according to M. Cruveilhier’s researches, that it destroys more than *one-third* of the infants who die shortly after birth. (*Anat. Path.*)

Ex.—*Apoplexy, blood effused over convolutions of left hemisphere, 3 months, (p. m.)*

Apoplexy, 3½ hours; gouty deposit in arteries.

Apoplexy, 24 hours.

Apoplexy, (first attack), 7 hours.

Apoplexy, (— attack), 2 hours.

Paralysis (of)

Apoplexy, 13 hours.

Paralysis, (of right side,) 6 weeks.

Apoplexy, paralysis, 4 years; hæmatemesis and melæna.

Apoplexy, (2nd attack), 1 hour; blood in the ventricles of brain, (p. m.)

48 *a* PARALYSIS OF—

Hæmencephalus; necrencephalus; paralytic stroke; hemiplegia; paraplegia (28).

To cases of apoplexy, complicated with paralysis, the old term “Paraplexy” may be applied. When ruptured vessels, or clots of blood, or *ramo-*

Names to be used.

lissement (necrencephalus) are detected, the part of the brain or spinal marrow affected should be stated. The *parts* paralyzed, and the time from the first attack, should be added after paralysis. Loss of sensibility is *anæsthesia*, loss of mobility *acinesia*. *Barbiers* appears to be a peculiar form of paralysis.

Ex.—*Paralysis, 2 months ; hæmaturia, 21 days.*

Paralysis of right side, 20 days (blood effused in left brain).

Paralysis, 9 months ; epilepsy, 3 months.

Paralysis, 7 years ; cerebral effusion, 7 days.

Paralysis, amaurosis, 3 years.

Paralysis (of), 9 months ; apoplexy, 2 hours.

Paralysis, 3rd attack, 30 hours.

b SHAKING PALSY.

Paralysis agitans.

Paralysis caused by lead, mercury, or arsenic, should be referred to its cause.

49 DELIRIUM TREMENS.

Trembling with delirium. Mania a potu.

The cause may be stated. See "Intemperance," 135.

Ex.—*Delirium tremens, 14 days ; bronchitis, 4 days.*

Delirium tremens, 8 months ago ; laryngitis, bronchitis, 14 days.

Delirium tremens, — years ; 2nd attack, 5 days.

50 CHOREA.

St. Vitus's dance ; tarantism.

51 a MANIA.

Madness ; insanity.

Ex.—*Mania, — months (from lactation.)*

Mania, 3 weeks ; exhaustion.

Mania (acute), 3 weeks.

Mania, 36 years ; gradual exhaustion.

Mania, 2½ years ; general paralysis.

Epilepsy, mania, exhaustion.

Mania, 12 days ; congestion of brain, 3 days.

Mania, — years ; pneumonia, 1 week.

Mania, 20 days ; epilepsy, 3 days.

b MONOMANIA.

Melancholia ; partial insanity ; hypochondriasis.

c DEMENTIA.

Mental imbecility ; incoherence ; insanity.

Ex.—*Dementia, 4 or 5 years.*

Senile dementia ; exhaustion ; effusion into chest, 6 months.

d IDIOCY.

Congenital idiocy ; malformation of the brain. See 43.

When lunatics die of phthisis, apoplexy, and other diseases, the cases should be registered "Monomania, phthisis," &c. &c. &c. (*Gall, Spurzheim, Burrows, Prichard, Conolly.*)

52 a EPILEPSY.

Epilepsia ; falling sickness ; epileptic fit.

Ex.—*Epilepsy, 8 years ; asphyxia in a fit (congestion of viscera ; effusion in lungs), (p. m.)*

Epilepsy, apoplexy, 43 hours ; no morbid appearance in head ; heart enlarged.

Names to be used.

Epilepsy from infancy, (age 6.)

Epilepsy, — years ; serous apoplexy, 36 hours.

Epileptic fit, 2 hours.

It should be stated in this and similar cases whether the fit were the first, &c., experienced ; or, at any rate, how long the patient had been subject to epilepsy.

b HYSTERIA.

Hysterics ; hysteric fit.

53 *a* TETANUS.

Trismus ; lock-jaw ; opisthotonos ; emprosthotonos ; pleurosthotonos ; tonic spasm. (*Mr. Curling.*)

Ex.—*Tetanus, 21 days.*

Compound fracture of ulna, 6 days ; tetanus, 24 hours.—Qy. How was the fracture caused?

b TRAUMATIC TETANUS.

(See 23 *d*, 145.)

c CRAMP.

Tonic spasm of particular muscles ; spasmus.

The tetanus of infancy (*trismus nascentium*) may be distinguished. Fatal cases of tetanus are generally induced by wounds (traumatic tetanus) ; the nature and locality of which should be added. “Cramp,” when fatal, may probably be regarded as a form of tetanus.

Ex.—*Spasm of the stomach, — hours (?) (a female, age 34.)*

54 CONVULSIONS.

Convulsio ; eclampsia ; clonic spasms.

The irregular muscular contractions, which cannot be referred to the preceding heads, are called “Convulsions.” When the convulsions occur in the course of other diseases, such, for instance, as “Diarrhœa,” or are excited by teething (74) the cause of death should be registered “Diarrhœa, convulsions,” or “Teething, convulsions,” adding the respective durations of the symptoms. “All spasmodic and convulsive actions have their source in one of three parts of the excito-motory system : the first series have their origin in the spinal marrow itself, the axis or centre of the system : I shall designate these cases by the epithet *centric*. The second series have their source in the excitator nerves, consequently at a distance from that centre : I shall denominate them the *excentric*. A third series, like the spasmodic tic of the seventh pair, in the course of the motor nerve.” “Convulsions belong to the late periods, and the close of all the diseases of the nervous system, as on the other hand repeated convulsions eventually affect the encephalon,” p. 38, p. 71. (*Dr. Marshall Hall, On the Nervous System.*) It may be added, that convulsions are one of the most common symptoms of zymotic disease and poisoning. When the convulsions are excentric, the nature of the excitement should be stated. (*Evanson and Maunsell.*)

Ex.—*Convulsions, 9 days.*

Convulsions, probably from imperfect digestion of a meal taken 12 hours previously.

Convulsions from premature birth in the 8th month.

Convulsions from teething, 20 days.

Teething, continued convulsion fit, 9 hours.

It is sufficient to mention cephalalgia, vertigo, catalepsy, ecstasy, lethargy, spinal irritation, in a fatal nosology.

Ex.—*Spinal irritation, 5 years ; tetanus, 5 days.*

55 *a* NEURALGIA.

b TIC DOULOUREUX.

Neuritis ?

Names to be used.

56 OPTHALMITIS or OPTHALMIA. Inflammation of the eye.

Purulent and scrofulous ophthalmia, and the other affections of the eye, may be distinguished when they are in any way connected with the cause of death. With a slight modification, this remark will apply to diseases of the ear. See note 71.

57 OTITIS. Inflammation of the ear.

Ex.—*Otitis*, 14 days; *erysipelas*, 10 days.

(See the previous note.)

The nervous system is so important in man, that its morbid phenomena have been examined from different points of view, and very properly referred to many distinct diseases, which sometimes co-exist, or are reciprocally causes and effects. All the distinct diseases which led to the death should be registered, and, as much as is practicable, in the order of causation; which appears often reversed in different cases. No special rule can be laid down applicable to all cases; but the following are examples: "Encephalitis, softening of the brain, paralysis;" "Apoplexy, paralysis;" "Ossified arteries, hæmorrhage, apoplexy;" "Meningitis, mania;" "Mania, encephalitis, dementia, thickening of cranium;" "Dementia, paralysis;" "Cancer of cerebellum, epilepsy;" "Softening of the spinal marrow, paraplegia."

ORGANS OF CIRCULATION.

(*Corvisart, Laennec, Dr. Hope, Dr. Clendinning, Dr. Stokes.*)

58 a CARDITIS. Inflammation of the muscular parts of the heart.

May be applied as a general term, equivalent to "Inflammation of the heart."

Ex.—*Carditis*, 12 months; *dropsy*, 8 weeks.

b PERICARDITIS. Inflammation of the external membrane, and of the sac in which the heart is contained.

Whether with or without effusion of lymph, pus, or serum may be stated. See Rheumatic fever (20). (*Pictairn, Dundas, Wells, Taylor.*)

Ex.—*Pericarditis*, 7 days.

Pericarditis, with adhesion of pericardium; *hydrothorax* and *ascites*, 2½ years, (p. m.)

Pericarditis (adhesion of pericardium), *hypertrophy*, 2 years.

c ENDOCARDITIS. Inflammation of the internal membrane of the heart. (*Bouillaud.*)

Frequently co-exists with pericarditis (endopericarditis) and is generally rheumatic.

Ex.—*Endocarditis* (rheumatic), 14 years; *bronchitis*, *anasarca* (2nd attack), 1 month.

Endopericarditis, 9 months.

59 Disease OF THE Cardiac VALVES.

Substitute "Mitral," "Tricuspid," or "Semilunar," for "Cardiac;" and "Ossification," "Contraction," "Vegetation," &c. for "Disease," as the case may require.

Ex.—*Disease of valves of heart*, 5 years; *hæmoptysis*, 3 days. See Example 60 a.

Names to be used.

Contraction of aortic opening ; hypertrophy of left ventricle ; dropsy above 20 years, (age 68.)

60 *a* **HYPERTROPHY OF THE Heart** Enlargement of the heart ; hypertrophia cordis.
OR **HYPERCARDIA.**

Dilatation, softening, ossification, and "simple," "eccentric," or "concentric" (?) hypertrophy, and the combination of these varieties, may be registered when accurately distinguished. Substitute "left ventricle," "right ventricle," "left auricle," "right auricle," for "heart" as may be required.

It has been elsewhere stated, that when rheumatism has existed, in connection with disease of the heart, it should always be registered.—"Rheumatic fever, endocarditis," "Rheumatic fever, pericarditis, hypertrophy of heart, dropsy," "Endocarditis, contraction of mitral valves, hypertrophy of left ventricle, dropsy," are examples of the mode of registering complications of heart disease in the order of sequence. *Dropsy* is so important a symptom that it should be invariably registered after the lesion by which it is believed to be caused.

Ex.—Heart disease after rheumatic fever, 4 years ago.

Disease of cardiac valves, with dilatation, about 4 years ; asthma, dropsy, 6 months.

Disease of mitral valve, 5 months ; pneumonia, 7 days, (p. m.)

Dyspnœa from valvular disease of heart, 4 months.

Hypertrophy ; apoplexy, 2 days.

Great enlargement of heart ; anasarca, 3 years.

Hypertrophy ; nephria, 3 years.

Hypertrophy of left ventricle ; hydropericardium, 8 months or longer.

Heart disease, 4—5 years ; congestion of lungs and anasarca, about 3 months.

Heart disease, 18 months ; anasarca, 3 weeks ; hæmoptysis, 6 days.

Heart disease probably, only seen once.

b **ATROPHY OF THE Heart.** Wasting of the heart ; atrophica cordis.

See the note under "Hypertrophy," 60 *a*.

61 **ANEURISM OF THE Heart.** Aneurisma.

Substitute "left ventricle," &c. ; "aorta," "popliteal artery," or any other artery, for "heart," and prefix "true," "false," as occasion may require.

Death is often caused in aneurism by the bursting of the heart or of the vessel, a fact which may be registered after the aneurism. Ulceration is the most frequent cause of rupture of the heart ; which is, however, sometimes caused by degeneration of the muscular tissue. (*Hodgson.*)

Ex.—Aneurism of aorta, (symptoms, 2 years.)

Aneurism of thoracic aorta,—years ; bursting into left pleura,—hours, (p. m.)

Aneurism of the arch of aorta,—years, (p. m.)

62 **ANGINA PECTORIS.** Suffocative breast pang ; neuralgia of the heart. (*Heberden, Forbes.*)

State whether there is disease of the heart.

63 **FAINTING.** Syncope.

Fainting, polypus, cramp, palpitation, &c., of the heart, are rarely independent and fatal diseases : but they may be registered as well as the organic changes, when they are secondary diseases, and the immediate cause of death.

Names to be used.

64 *a* ARTERITIS. Inflammation of arteries.

Is believed to be a cause of dry gangrene. (*Dupuytren.*)

b OSSIFICATION OF ARTERIES.

Sometimes induces dry gangrene, softening of brain, hæmorrhage, affections of the heart, which are the direct causes of death.

65 PHLEBITIS.

Is of rare occurrence, except as the effect of venesection and wounds, the nature of which should always be stated. (*Arnott.*)

Phlebitis, 16 days; syncope, 6 or 8 minutes.

66 VARICOSE VEINS. Varix: hypertrophy of veins.

Only fatal when it gives rise to rupture of the veins and hæmorrhage.

RESPIRATORY ORGANS.

(*Lænnec, Louis, Andral, Williams.*)

67 LARYNGITIS. Inflammation of the larynx; œdema of the glottis.

"Chronic laryngitis, or ulceration of the larynx," is very rarely a primary disease. It occurs in phthisis, syphilis, and cancer, and should be registered accordingly. It is sometimes called "Phthisis laryngea."

Ex.—*Laryngitis, 48 hours.*

Phthisis laryngea, 18 months.

68 LARYNGISMUS STRIDULUS. Spasms of the glottis; crowing disease.

Where the cause of the affection is known, it should be stated. (*Dr. Hugh Ley.*)

69 *a* BRONCHITIS. Inflammation of the air tubes; catarrh; tracheitis; peripneumonia notha.

"Sthenic," "Asthenic," "Chronic" bronchitis may be distinguished in the registers. Bronchitis is frequently a complication of emphysema, heart disease, or phthisis, and should in such cases be registered "Emphysema; bronchitis," &c.

Ex.—*Bronchitis, 2 years; acute bronchitis and dysentery, (epidemic), 15 days, (p. m.)*

Bronchitis of both sides, 14 days.

Bronchitis, emphysema, 10 years.

Bronchitis, 5 years; morbus cordis, 1 year.

Chronic bronchitis, 30 years; nephria, 2 years; anasarca, (disease of mitral valve.)

Bronchitis, 2 months; pulmonary apoplexy.

b BRONCHORRHŒA.

Bronchial flux; humoral asthma; pituitous catarrh.

70 *a* PLEURISY, or PLEURITIS. Inflammation of the lining membrane of the lungs and chest.

It is rarely fatal except when it terminates in effusion, and it should then be registered "Empyema." "Rheumatic pleurisy" should be distinguished. *Diaphragmatic pleurisy* is an important variety of pleurisy. See note 71.

Names to be used.

Ex.—*Pleuritis, pericarditis, 3 days.*

Pleuritis, 9 days.

b EMPYEMA.

Fluid, the product of inflammation, within the pleura. (*Dr. Walshe.*)

c PNEUMOTHORAX.

Air within the pleura ; generally from perforation of the membrane in phthisis.

Ex.—*Pneumonia, 7 days ; pneumothorax, 2 hours, (age 7 weeks.)*

71 *a* CONGESTION OF THE LUNGS. Pulmonary apoplexy.

b PNEUMONITIS, or PNEUMONIA. Inflammation of the tissue of the air cells ; peripneumonia.

It should be stated whether of the right or left lung, or both. "Red hepatization," "Yellow hepatization." "Splenization," may be added, as the case may require. "Vesicular pneumonia," "Interlobular pneumonia," and "Typhoid pneumonia," may also be distinguished. When pneumonia, bronchitis, and pleurisy succeed each other or other diseases, they should be registered in the presumed order of succession thus, "Hooping-cough, bronchitis, pneumonia ;" "Influenza, pneumonia, pleurisy." (*M. Grisolle.*)

Pneumonia is the common name for inflammation of the lungs ; it would be convenient to call the purely inflammatory affection "pneumonitis," and to reserve "pneumonia" for the much more frequent inflammation supervening on small-pox, hooping-cough, measles, typhus, and other diseases of the epidemic class. The same distinction may be advantageously extended to all other inflammations.

Ex.—*Pneumonitis, (right lung,) 3 weeks.*

Pneumonitis, 7 days ; convulsions, 2 days (teething.)

Pneumonitis, 8 months.

Pneumonitis, 3 weeks ; croup, 2 days.

Pneumonitis, 4 days.

Pneumonia, in connexion with cyanosis.

Pneumonitis, 8 days ; hæmoptysis, 2 hours.

Pneumonitis, hepatization (several months.)

c PLEURIPNEUMONITIS, or PLEU- Inflammation of the lungs and
RIPNEUMONIA. pleura.

Ex.—*Pleuripneumonitis, 48 hours.*

Pleuripneumonitis, 21 days ; effusion in pleura, 5 or 6 days.

72 *a* ASTHMA.

Paroxysms of difficult breathing.

b EMPHYSEMA.

In popular language, "Asthma" is employed in the same sense as "difficulty of breathing" (dyspnœa), arising from a great variety of causes, of which it is justly considered a symptom. Emphysema, true asthma, is generally complicated, when fatal, with disease of the heart and bronchitis, which should be registered. (*Louis.*)

Hypertrophy, dilatation, contraction of the air tubes, are observed chiefly in phthisis. The lung is of course liable to be the seat of hæmorrhage, dropsy, œdema, cancer, and tubercle ; the latter being the cause of phthisis, its most destructive disease.

Ex.—*Emphysema of lungs ; bronchitis, 3 days.*

Asthma, 12 years ; anasarca, 6 months ; gangrene in legs, 6 months.

Names to be used.

73 PHTHISIS.

Consumption.

Phthisis is still retained in this place; it is not universally admitted that it belongs to the same genus as scrofula. The term should be restricted to designate the tubercular disease. See 33 *g*.

Ex.—*Phthisis*, 2 years; *peritonitis*, 24 hours (*perforation*.)

Phthisis, 4 years; *hemiplegia* (right side), 3 months; *erysipelas* of chest, 3 days, (p. m.)

Phthisis, 5—6 weeks; *empyema*, 3 weeks.

Phthisis, 10 months; *hæmoptysis*, 9 days.

Phthisis, 6 months; *aphtha*, 12 days.

Phthisis, 3 years; *dropsy*, 3 months; *ulcer of larynx*.

Phthisis, 6 months; (*softened tubercles in left lung*, p. m.)

Phthisis (*cavities in upper lobes of both lungs*.)

Phthisis, 20 years; *pneumothorax*, 3 days; *œdema of left side*.

HÆMOPTYSIS. See 28 *b*.

DIGESTIVE ORGANS.

(*Abercrombie, Johnson, Hodgkin, Kiernan, Symonds.*)

(*Intestinal Canal.*)

74 TEETHING.

Dentitio.

The process of teething is rarely a cause of death, except when it occasions affections of the mucous membranes and of the nervous system. The teething and the secondary diseases should be registered.

Ex.—*Teething*, 20 days; *convulsions*, *effusion in brain*, 3 days.

Teething, 3 months; *bronchitis*, 20 days; *cerebral disease*; *convulsions*, 10 days.

75 a GLOSSITIS.

Inflammation of the tongue.

Ex.—*Glossitis*, 10 days.

b STOMATITIS.

Inflammation of the mouth.

c PAROTITIS.

Inflammation of the parotid glands.

See mumps, scrofula, and typhus, (6) (17) (33).

76 QUINSY.

Tonsillitis; cynanche tonsillaris.

Inflammation of the tonsils.

77 PHARYNGITIS.

Inflammation of the pharynx.

78 ŒSOPHAGITIS.

Inflammation of the œsophagus.

79 GASTRITIS.

Inflammation of the internal coats of the stomach.

The anatomical appearances, such as arborescent, punctiform, &c. injections, the colour of the mucous membranes, softening, induration, or hypertrophy may be shortly stated, in this rare disease.

Ex.—*Gastritis*, 15 days; *hydrocephalus*, 10 days.

Gastritis, 30 years; *phthisis*, 2 years; *peritonitis* (*perforation*), 36 hours.

Names to be used.

80 ENTERITIS.

Inflammation of the internal coats and of the glands of the small or large intestines; generally extending to the submucous and muscular coats. Ileo-colitis.

Duodenitis is inflammation of the duodenum. Colitis is inflammation of the large intestine. Gastro-enteritis may be applied to a complication of gastritis and enteritis. Chronic, acute, and sub-acute inflammations of the intestinal canal have been distinguished. "Infantile remittent fever" is, according to some pathologists, a sub-inflammation of the intestinal tube.

Ex.—*Enteritis, 6 days.*

Enteritis, nearly 2 months.

Enteritis, 4 months; tabes mesenterica, 3 months; bronchitis, 4 days.

Gastro-enteritis, — peritonitis, 3 weeks.

81 a PERITONITIS.

Inflammation of the peritoneum

Is "partial" or "general." Follows intestinal "hernia," "injuries," "perforation;" which are the primary causes of death. "Erythematic" peritonitis has been distinguished. "Puerperal peritonitis" should be so designated. See 18 and 104.

Ex.—*Peritonitis, 5 days; (had reducible inguinal hernia on right side for 4 years.)*

b TUBERCULAR PERITONITIS.

Chronic peritonitis will almost always be found to be tubercular; and should then be so designated. (33.)

Ex.—*Peritonitis, 6 months, (tubercular.)*

TABES MESENTERICA. See 33 f

82 a ILEUS.

Inflammation and gangrene of the muscular coat of the intestine. Iliac passion.

Constipation sometimes gives rise to, and is sometimes caused by, ileus. *Colic* is rarely fatal unless it terminate in ileus. Alvine concretions and torpor of the intestine are causes of constipation. These particulars may be noticed. "Twist of the bowel," as it is called, causes "Ileus."

Ex.—*Ileus, 4 days.*

b INTUSSUSCEPTION.

Invagination of the bowel; a part of the bowel introduced into the part below.

Ex.—*Intussusception, 4 days.*

c LEAD COLIC.

Colic of Poictou; painter's colic; lead colic; colica pictorum; colica pictorum.

This is one of the results of poisoning by lead. It belongs to the head "Poisoning," (137.)

83 HERNIA.

Rupture.

"Congenital," "inguinal," "crural," or "umbilical," should be prefixed. Strangulation of the bowel produces peritonitis; which might, if thought

Names to be used.

necessary, be registered. Where an operation has been performed, state that circumstance, as thus: *old umbilical hernia, 10 years; operation, 36 hours. Inguinal hernia, 5 years; strangulated, 20 hours; operation, 2 hours. (Lawrence.)*

84 STRICTURE OF—

Add the part of the intestinal canal affected.

Is generally either a consequence of previous ulceration or of cancerous disease; and causes death by inanition, or by constipation and ileus. "Spasmodic stricture" may perhaps produce the same results.

Ex.—*Contractura recti, 15 months.*

Cancer, 3 months; colitis, 1 month; stricture of intestine, (the colon?) 20 months; inflammation, 7 days.

Stricture of bowel, caused by a plum-stone. (The intervals of time should have been stated.)

85 a ULCERATION OF—

b PERFORATION OF—

Add the part of the intestinal canal affected.

Ulceration is generally the effect of enteritis, dysentery, typhus, tubercle, or calculus in the appendix caec. verm.; and may cause fatal peritonitis by perforating the intestines. The perforation of the stomach, or bowel, is at times spontaneous; it may be the effect of acrid poisons, or be produced after death by the gastric juice. (*Carswell, Hodgkin.*) (32) (35.)

Ex.—*Peritonitis, 36 hours, from perforation of stomach, (p. m.)*

[It is not stated how the perforation was caused in this case.]

Rupture of cæcum close to appendix; caused by two calculi of phosphate of lime and fæces; ill 3 days.

Calculus in appendix cæci verm. causing perforation, 6 days.

86 a DYSPEPSIA.

Indigestion.

The *embarras gastrique* of the French, and "bilious attack," have been designated "Acute dyspepsia." A deficient, excessive, perverted appetite (anorexia, bulimia, pica) and heartburn, as well as nausea, vomiting, flatulence, tympanites, are either symptoms of other diseases, or are referred to this head. (*Dr. Todd; Dr. R. D. Thomson.*)

Ex.—*Dyspepsia, 1 year; gastro-enteritis, 1 month.*

Dyspepsia, 2 years; atrophy, 1 year.

b PYROSIS.

Water-brash. Gastrorrhœa.

c GASTRALGIA.

Gastrodynia, cardialgia, enterodynia, enteralgia, morbid sensibility of the stomach, gastric dyspepsia.

Diarrhœa, dysentery, cholera, worms, salivation, ascites, hæmorrhoids, hæmatemesis, melæna, tabes mesenterica, will be found in other classes.

87 PANCREAS DISEASE.

The diseases of the pancreas are inflammation and such as affect the body generally. When detected, their nature should be stated. For the disease most common—scirrhus, see 35.

87* SPLEEN DISEASE. (Liver.)

Splenitis; congestion, or enlargement, of spleen.

88 HEPATITIS.

Inflammation of the liver.

"Acute" or "Chronic" may be prefixed; and "terminating in abscess" be added in well-marked cases.

Names to be used.

Ex.—*Chronic hepatitis, 1 year; diarrhœa and vomiting, 3 weeks.*
Hepatitis, 4 months; atrophy, 2 months.—
Hepatitis, 10 days.

89 a JAUNDICE.

Icterus.

Jaundice may arise when the bile is retained undecomposed in the blood (*Liebig*); from obstruction of the ducts; from gall stones, or congestion, inflammation, and adventitious deposits in the liver. The cause of jaundice should be recorded. When jaundice terminates in apoplexy, it should be so registered. The jaundice of the new-born should be carefully distinguished.

Ex.—*Jaundice, 11 days.*

Jaundice, 2 days (p. m.), (age 2 days.)

b GALL STONES.

Chololithus; biliary calculi.

90 CIRRHOSIS.

Tuberculated liver; nutmeg liver;
 hob-nailed liver.

91 FATTY LIVER.

Adipose degeneration of the liver.

The functional disorders of the liver—diminution, excess, depravation of the biliary secretion—are either symptoms of diseases, or are rarely fatal. (*Dr Budd.*)

Ex.—*Liver disease; ascites, 9 months.*

Liver disease; erysipelas, several attacks; peritonitis, 10 days,
 (p. m.)

Cirrhosis, —; anasarca, — months.

URINARY ORGANS.

NOTE.—The technical or Latin names should be almost invariably employed in returning diseases of this and the following class.

(*Prout, Bright, Brodie, Christison.*)

92 NEPHRITIS.

Inflammation of the kidneys.

Pyelitis has been applied to inflammation of the lining membrane of the pelvis and cavities of the kidney. (*M. Rayer, Mr. G. Robinson.*)

Ex.—*Nephritis of right kidney; gastritis, 11 days, (p. m.)*

93 ISCHURIA.

Suppression of the secretion of urine.

This with the following affection is generally a symptom of diseases. It sometimes precedes coma and convulsions.

94 DIURESIS.

Excessive secretion of urine, not containing sugar.

95 GRANULAR DISEASE OF THE KIDNEYS OR NEPHRIA.

Bright's disease. Renal dropsy.
 Albuminuria.

Nephria has been derived from νεφρός.

The presence of *nephria* is inferred with considerable certainty if the urine be impregnated with albumen, diminished in quantity, and of low specific gravity. When the return of the blood by the renal vein is obstructed, or congestion is produced, albumen is effused with the urine. (*Robinson.*) Dropsy, inflammation, and coma occur, and should be registered in the order of their occurrence. The same rule should be applied whether *nephria* follow or precede other diseases; such as disease of the heart and liver.

The albumen in the urine has been distinguished by Dr. Prout as serous and chylous: if the latter be ever observed, it should be described.

Ex.—*Nephria, 6 months; bronchitis, 2 months, (p. m.)*

Diseased kidneys, 2 years; ovarian dropsy, (p. m.)

Names to be used.

96 DIABETES.

A disease with sugar in the urine.
Diabetes mellitus.

Co-existing diseases—such as *phthisis* and *jaundice*—should be registered.

Ex.—*Diabetes*, 2 years; *phthisis*, 3 months.

Diabetes, 18 months; *phthisis*, 6 months (*extensive cavities in left lung*), (p. m.)

Diabetes, — years; *effusion in pericardium*, 18 hours.

97 a CALCULUS—(*Uric Acid*). Stone. Lithia.

When it can be ascertained, the composition of the stone should be stated—beginning with the nucleus. For *uric acid*, therefore, substitute *oxalate of lime*, *cystic oxide*, *phosphate of lime*, the *triple phosphate of magnesia* and *ammonia*—as the case may require. It should be mentioned whether the stone was in the kidney or the bladder; and when operations were performed for its removal, what they were, and by what affections they were followed.

Ex.—*Calculus vesicæ*, — years, (*peritonitis*, 52 hours after *lithotomy*.)

b GRAVEL—(*Uric Acid*).

(See the note under Stone.)

98 a CYSTITIS.

Inflammation of the bladder.

b CYSTIRRHŒA.

Catarrh of the bladder. Chronic inflammation of the bladder.

99 Disease OF THE PROSTATE GLAND.

Enuresis (incontinence of urine), and *dysuria* (difficulty of making urine), are frequent symptoms of disease of the prostate gland.

The most common diseases are inflammation, enlargement, and concretions—which may be substituted for *disease* in the registers. (*Sir E. Holme, Mr. Coulson.*)

Ex.—*Disease of prostate*, 8 or 9 years; *abscess in perinæum*.

100 a CONTRACTURA URETHRÆ.

Ischuria urethralis. Stricture of the Urethra.

Ex.—*Contractura urethræ* [] *bladder and kidneys diseased; red hepatization of lungs.*

b INFILTRATIO URINÆ.

Extravasation, or infiltration of urine in the cellular tissue.

For obvious reasons, several of the diseases of the urinary organs co-exist or succeed each other; thus, stricture of the urethra may give rise to diseases of the bladder and kidneys. Stone is the accidental consequence of an altered state of the urine; and when it is formed, may occasion inflammation of the bladder or suppuration of the kidneys. Diabetes, in the phraseology of Dr. Prout, is the result of derangements in the primary or secondary assimilative functions; and the oxalic acid diathesis is, according to him, connected with epidemics and cutaneous eruptions—as uric acid is with gout, and lactic acid with rheumatism.

ORGANS OF GENERATION.

(*Gooch, Bhundell, Ferguson, Lee, Ramsbotham, Locock.*)

101 ORCHITIS.

Inflammation of the testicle.

Generally from gonorrhœa. (21.)

Names to be used.

102 HYSTERITIS.

Inflammation of the uterus.

Excessively rare, except after childbirth. (104.)

103 PARAMENIA.

Mis-menstruation. amenorrhœa suppressionis; leucorrhœa. Chlorosis (green-sickness), (29.)

From various motives it is probable that these affections will not always be distinguished in the registers; and it must be borne in mind that they are frequent symptoms of cancer or tuberculous disease of the uterus, which should be named (when detected) as the primary disease.

OVARIAN DROPSY. See 30 *h*.

104 *a* CHILDBIRTH.

Partus. Parodynia.

EX.—*Childbirth*, 10 days, [*“from commencement of labour to death,”* is always understood;] *metria*, 7 days; *peritonitis*, *pleuritis*.

Childbirth, 2 days; *flooding*, 4 hours.

Childbirth, — hours; *rupture of uterus*, — hours.

Uterine phlebitis, 6 days.

Extra-uterine foetation, 3 months; *flooding in peritoneum*, 24 hours (p. m.)

Childbirth, — hours.

Puerperal convulsions, — hours.

Childbirth, 12 days; *uterine phlebitis*, 7 days.

Childbirth, 10 days; *puerperal fever*, 7 days.

Scarlatina, 3 days after parturition.

Parturition, from putrescency [of foetus,]—*exhaustion*.

Childbirth; *placenta presentation*; *flooding*; *death* 4 hours after delivery by turning.

NOTE.—In cases of this kind “duration of illness” will imply the period from the commencement of labour to death. Confusion will be caused if this rule be not attended to, as some will date the term from the commencement, others from the close of labour.

b ABORTION.

Abortus.

“Miscarriage” is generally employed if the foetus be expelled within six weeks after conception; “Abortion,” if between six weeks and six months; “Premature labour,” if the delivery occur between the sixth and ninth months, when the child may live. The month (lunar) of pregnancy should be stated.

Childbirth, like teething, is a physiological process, and only proves fatal by giving rise to the following accidental maladies; which should be registered after “Childbirth,” or “Abortion;” namely, “Exhaustion from difficult labour, from deformed pelvis,” &c. &c.; “Rupture of the uterus;” “Extra-uterine foetation;” “Flooding;” “Convulsions;” “Mania;” “Syncope;” “Abscess of the mamma;” “Crural phlebitis” (Phlegmasia dolens); “Uterine phlebitis;” “Hysteritis;” “Peritonitis.” (The last three diseases are met with in puerperal fever (18) [Metria], and are supposed by some pathologists to be its anatomical cause.) Other diseases occur in or after delivery, and, as well as several of those above named, during pregnancy. Whenever females are known to be pregnant at the time of death, the word “Pregnant” should be inserted in the register.

The unimpregnated uterus is frequently the seat of carcinomatous diseases, tumors, polypus, ulceration, hæmorrhage; the designation of which can be attended with little difficulty, if the remarks under those heads be consulted.

Names to be used.

ORGANS OF LOCOMOTION.

(*Sir Benjamin Brodie.*)

- 105 ARTHRITIS (*knee*). Synovitis; inflammation of the joints
(*not gout*).

The particular joint or bone should be added as above in a parenthesis after this and the following heads. The termination of the Arthritis in suppuration, &c., should be recorded. Inflammation of the bursæ is very seldom fatal.

Ex.—*Loose cartilage in knee-joint; operation, — days; erysipelas of leg, and abscess, — days.*

- 106 CHRONIC RHEUMATISM. See 20. Cold rheumatism. Lum-
bago. (*Bright, Elliotson.*)

- 107 OSTITIS. Inflammation of the bone. Pe-
riosteitis, osteitis, endosteitis.
(*Walshe.*)

- 108 EXOSTOSIS. Tumour of the bone.
Generally arises from syphilitic irritation; and is rarely fatal itself, except by pressure on important parts.

- 109 BRITTLENESS OF THE BONES. *Fragilitas ossium.*
Is observed in cancer and some other diseases. It should be registered in such cases as a secondary disease.

- 110 *a* SOFTENING OF THE BONE. *Mollities ossium.*
Is often met with in rickets. (33 *h.*)

b CURVATURE OF THE SPINE.

- 111 CARIES. Ulceration of the bone; generally
in scrofula or syphilis. (21, 32,
33.)

Ex.—*Caries of 2nd cervical vertebra; paralysis.*
Caries of vertebra, 4 years.

- 112 NECROSIS. Death of bone. (39.)

The joints, bones, and ligaments are disorganized by inflammation, scrofula, and cancer; affections to which the terms "white swelling" and "disease" are too indiscriminately applied. *Psoas abscess* is a primary lesion of the spine: it is almost invariably of a scrofulous nature. (33.)

Ex.—*Necrosis of tibia, 3 years; ascites, 5 months.*

FRACTURES, &c., see 144.

INTEGUMENTARY SYSTEM.

(*Willan, Bateman, Biett, Cazenave and Schedel, E. Wilson*)

Several species and varieties of all the subjoined cutaneous diseases are distinguished, but it is unnecessary to enter here into further detail, as they are rarely fatal.

- 113 ROSEOLA. Rash; rose rash.

- 114 URTICARIA. Nettle rash.

- 115 ECZEMA. Humid tetter; running scald;
crusta lactea.

Ex.—*Eczema of scalp, 10 months; meningitis, 8 days.*

(4)—EXTERNAL CAUSES: POISONING, ASPHYXIA, INJURIES.

Great numbers of the cases of disease in the previous classes are caused by external agents; by intemperance, cold, want, and effluvial poisons. But where the external causes are not striking and obvious, they are very properly not registered; for so much of their general influence as can be surmised is always understood to be in operation, and to be susceptible of demonstration, by reasoning on the wider basis of the aggregate facts. In the registration of deaths under this class, the following points should be attended to:—

(1.) Before deaths are ascribed to intemperance, starvation, poison, or injury, its agency should be distinctly ascertained.

(2.) Where a person who has suffered from previous intemperance, starvation or poison, dies of a specific disease, the cause of death should be registered "*Intemperance, delirium tremens;*" "*Starvation, typhus,*" &c. &c.

(3.) In the deaths by mechanical violence, the *nature* of the *injury* may be stated. The *circumstances* in which the death happened, and the machine, railway, mine, factory, work, or animal, by which it was caused, should be stated.

(4.) With reference to the circumstances which attended the death, it should be inquired whether it was an accident, a suicide, manslaughter, murder, justifiable homicide, or judicial execution; and the result of the injury should be registered.

(5.) The duration of illness, dating from the receipt of the injury, or the operation of the cause, should always be stated.

For full instructions respecting the registration of violent deaths, see the Letter to Coroners, and the subsequent observations, part 2.

(*Orfila, Devergie, Beck, Christison, Taylor.*)

Names to be used.

135. INTEMPERANCE.

Drunkenness; ebrietas; ebrietas.

Habitual and excessive indulgence in spirits, wine, or fermented liquors is to be generally understood by intemperance: where opium or any other drug is taken, and when children or other persons are suddenly destroyed by a large draught of spirits, the particulars should be mentioned.

Intoxication leads to accidents of various kinds, which should be registered, "Intoxication; fall from a horse." "Intoxication; exposure to cold," &c. &c.

Many drunkards are exposed alternately to, and die from, the effects of starvation, *and* intemperance; their deaths should be registered, "Intemperance; Starvation," from want of shelter, clothing or food. State any important facts of the case.

Ex.—*Intoxication; effusion on brain, — hours.*

Exhaustion caused by the over use of stimulants, — years.

136 STARVATION.

Want of food; destitution; cold: famines; frigus.

This is generally intended to imply the privation of the necessary quantities of food, clothing, and firing. If any person be unhappily starved in the last stages of consumption (or other chronic diseases) the death should be registered, "Consumption *and* starvation;" and the arrangement should be reversed where the starvation is believed to be the cause of the fatal disease. Death by starvation may, it is evident, in different circumstances be an accident, a suicide, manslaughter or murder; and should be distinguished accordingly. Where a person dies from exposure to cold in a snow-storm, or in a frosty night, and when infants are murdered by exposure to cold, or die from the want of their natural nutriment, milk, the specific circumstances should

Names to be used.

be stated as nearly as they can be ascertained. (*Dalton, Liebig, Dr. Budd, Dr. R. D. Thomson*)

137 POISONING BY —

Venenum; venenatio.

The particular poison should if possible be ascertained and registered. The more common and fatal poisons are—opium (solid or in the form of laudanum), arsenic, oxalic acid, bichloride of mercury (corrosive sublimate), hydrocyanic acid (prussic acid), strychnia (nux vomica), sulphuric acid, verdigris, compounds of lead, night-shade, cantharides; the gases,—carbonic acid, carburetted hydrogen, sulphuretted hydrogen; quack medicines or official drugs, given at improper times and in over doses.

The motive which led to the administration of poison is a remote cause of death; but it cannot always be ascertained.

To decide in some cases whether death has been caused by poison requires a thorough knowledge of medicine and analytic chemistry; but the following remarks will put the Registrars on their guard against registering suspicious cases without a certificate from a medical man, or a coroner's information.

The chief characteristics usually ascribed to the *symptoms of poisoning*, considered generally, are, that they commence suddenly and *prove rapidly fatal*; that they increase steadily; that they are uniform in nature throughout their course; that *they begin soon after a meal*; (*i. e.*, soon after the poison has been given); and that they appear while the body is in a state of perfect health.—*Christison*. The moral evidence is also taken into account, such as the fact of other members of the family having been similarly affected at the same time; the person suspected hastening the funeral, and giving a false statement of the circumstances of the death; having a personal quarrel with the deceased; succeeding to his property, &c. &c.

(a) *Opium*.

Produces deep sleep; and in large doses death in 7—12 hours. From two to four drops of laudanum, or the one-eighth of a grain of opium, have proved fatal to infants. Daffy's elixir, and other "soothing" quack medicines which contain opium, sometimes destroy the children to whom they are administered.

Ex.—*Laudanum, 2 drachms; which she had bought to procure sleep; (a pauper in a workhouse.)*

(b) *Arsenic (Oxide of)*.

The symptoms—burning pain in the stomach; dryness in the throat. Vomiting and purging generally begin in half an hour or an hour, and are followed by convulsive tremors, terminating fatally in one to three days. The poison is sometimes fatal in six hours; at other times in as many weeks. The white oxide is almost tasteless, and is therefore more frequently used by murderers than any other poison.

(c) *Corrosive Sublimate*.

Bichloride of Mercury.

The symptoms somewhat resemble those produced by arsenic, but they supervene immediately; a strong, acid, metallic taste, and constriction or burning in the throat are felt, followed by irritation in the alimentary canal, with the discharge of blood upwards and downwards. If these symptoms be accompanied or followed by true mercurial *salivation*, "it may be safely inferred that some *soluble compound of mercury* has been taken."—*Christison*. The other preparations of mercury produce salivation and *shaking palsy*, which are secondary effects of mercurial poisons, as *colic* and *paralysis* are of *lead*. See 82 c.

(d) *Nux Vomica*.

Strychnia, the active principle.

This poison produces death very rapidly by violent convulsive starting spasms (tetanus).

(e) *Hydrocyanic Acid*.

Prussic acid.

Kills instantly in large doses, or in a few minutes—after violent convulsions. If the patient survive 40 minutes he will generally recover.

Names to be used.

(f) *Oxalic Acid.*

"If a person, immediately after swallowing a solution of a crystalline salt, which tasted purely and strongly acid, is attacked with burning in the throat, then with burning in the stomach, vomiting, particularly of bloody matter, imperceptible pulse, and excessive langour, and dies in half an hour, or still more, in 20, 15, or 10 minutes, I do not know any fallacy that can interfere with the conclusion that oxalic acid was the cause of death."—*Christison*. Oxalic acid is often mistaken for Epsom salts, from which it is easily distinguished by the taste. The salts are not acid, but bitter.

(g) { *Sulphuric Acid* (Oil of Vitriol),
Nitric Acid (Aquafortis),
Hydrochloric Acid.

Are liquid corrosive poisons. "If, immediately after swallowing a liquid which causes a sense of burning in the throat, gullet, and stomach, *violent vomiting* ensues, particularly if the vomited matter is mixed with *blood*; if the mouth becomes *white* or *yellow*, and *stripped of its lining membrane*, and the cheeks, neck, or neighbouring parts show vesications of white, and subsequently yellow or brown, excoriated spots; if the *clothes* show *red spots*, and are disintegrated there, I cannot see any objection to the inference that *nitric* or *sulphuric acid* has been taken."—*Christison*.

(h) *Liquor Potassæ.*

Ex.—*Liquor Potassæ* (quantity not known), 24 hours, (p. m.)

(i) *Carbonic Acid.*

The circumstances in which this and other poisonous gases are inhaled should be stated. Carbonic acid is given off by lime-kilns, fermenting liquors (in brewers' vats for instance), and burning charcoal.

138 a SCALD.

b BURN.

Combustura. See Note 139.

139 EXPLOSION.

It should be stated what part is affected; whether the injury occurred in any mine, &c.; and what circumstances led to the fatal explosion, burn, or scald.

140 LIGHTNING.

State briefly in all cases where the patient was struck, whether under a tree, in a house, &c.; the nature of any visible injury on the body; and any circumstances which can explain the course the lightning took, or the death.

Suspension of Respiration.

141 a HANGING.

Asphyxia by suspension at the neck.
 Suspensio.

b STRANGLING.

Asphyxia by a ligature tied round the neck. Strangulatio.

c SUFFOCATION (OR OVERLAY-
 ING.)

Asphyxia by closing the mouth and nostrils. Suffocatio.

d CHOKING.

Asphyxia by a mechanical obstruction causing closure of the glottis.
 (Dr. Kay, Dr. Carpenter.)

142 IMMERSION IN NITROGEN
 (or in any irrespirable gas.)

Asphyxia by privation of oxygen.

143 DROWNING.

Immersion in water; asphyxia by the privation of air; syncope in drowning. Submersio.

In all cases it should be stated, if practicable, whether the drowning or the other forms of asphyxia were accident, suicide, manslaughter, or murder.

Names to be used.

Mechanical Injuries.

144 *a* CONTUSION OF—

Contusio.

b CONCUSSION OF—

Concussio; shock.

c FRACTURE OF—

FRACTURA.

Ex.—*Fracture of femur, 4½ months; bed-sores, 45 days.*

d DISLOCATION OF—

LUXATIO.

State of what parts; whether accidental or not; and how caused; whether, by falls from heights, or into pits; by the fall of earth, stone, &c.; by machinery; by railway carriages or engines; stage coaches, or other coaches, horses, &c. &c.

Many children appear to die from injury in the birth. See 42.

Ex.—*Difficult parturition, 3 hours. (The child.)*

145 WOUND.

Vulnus. Cut, chop, bite, shot.

State of what part; by what instrument inflicted, &c.; and whether accidental, suicidal, &c. *Loss of blood* (28), or secondary inflammation, is generally the immediate cause of death.

Injuries are followed by tetanus, erysipelas, mortification, extravasation of urine, emphysema, &c., which should be registered after the injury; when *surgical operations* are a cause of death, the diseases or injuries for the relief of which they are performed, and the diseases by which they are followed, should be registered. (*Sir Astley Cooper, Mr. Liston, Mr. Guthrie, Mr. Alcock, Chelius and South.*)

Ex.—*Injury of head by a fall [from* ,] *1 month; hydrocephalus, 3 weeks.*

In the *Act 6 and 7 Wm. IV., c. 86, s. 25*, it is provided that “in every case in which an *inquest* shall be held on any dead body, the jury shall inquire of the particulars [one of which is the ‘cause of death’] herein required to be registered concerning the death, and the coroner shall inform the registrar of the finding of the jury, and the registrar shall make the entry accordingly.”

The attention of the coroners throughout the country is invited to this clause, and to the previous remarks on violent deaths, as the particulars of the cause of death are required to be stated in precise terms by the jury, under the direction of the coroner. In “sudden deaths,” without violence, the fatal disease which is the cause of death should be particularly inquired into; and such terms as “Natural death,” or “Visitation of God,” should be avoided whenever more definite information can be given.

It must occasionally happen in a registration of the deaths of the entire population, that the cause of death is unknown, or only imperfectly known, either from the peculiar circumstances in which it occurred, from there having been no medical man in attendance, or, if present, from his having had no means of obtaining adequate information.

The following are examples of the terms which are used in such circumstances:—

When the manner of death, and the nature of the means by which it was caused are entirely unknown.	}	Unknown.
--	---	----------

When only a few facts connected with the cause of death are known, it is always of importance to register those facts, although they may be vague, as in the annexed examples.

- a. Found dead.
- b. Sudden death.
- c. Fell down dead in the street.
- d. Found dead in bed.
- e. Found exposed without marks of violence.
- f. Found exposed with marks of violence.
- g. Found drowned with (or without) marks of violence, &c. &c.
- h. Death by violence.
- i. Death by spontaneous disease.

When the death is known to have arisen from disease of a particular part or organ, the *nature* of the disease being unknown.

Disease of the heart; disease of the lungs; or, still more vaguely, disease of the chest, &c. &c. &c.

X.—*An Alphabetical List of Diseases, and Causes of Death, nearly all of which have been met with in the Registers—with References (by figures) to the Statistical Nosology.*

The insertion of names in this list must not be considered as by any means sanctioning their use. For the names which it is recommended should be used, see the first column of the previous *Nosology*, to which the figures always refer. The queries in the second column will remind the informants and registrars of points which should be borne in mind in assigning the cause of death.

Abdominal effusion	Ascites, 30 <i>f</i> .
Abdominal inflammation (vague)	Query, whether peritonitis? or enteritis? 80, 81.
Ablactation	136; 38.
Abortus	Abortion, 104 <i>b</i> .
Abrasion of the mucus membrane of stomach and intestines	(A bad term.) Poisoning? ulceration? 137, 85.
Abscess or abscessus	No. 31. Abscess may occur in almost any part of the body. The following (in which abscess occurs) are bad entries, or have been sometimes incorrectly applied.
Abscess in air tubes	Abscess of lung opening into air tubes?
Abscess of the breast	If meant as abscess of the female breast, it is correct; but in some parts of the country "breast" is used for "chest," see 71 <i>b</i> ; 104.
Abscess in the groin	Syphilis? psoas abscess? 21; 31.
Abscess on the head	Abscess in the <i>brain</i> ?
Abscess in pelvis	From what cause?
Abscess of the pleura—of the side	Empyema, 70 <i>b</i> .
Abscess of the throat	Quinsey, 76.
Absorbents (inflammation of)	Scrofula?
Absorption of morbid virus	What virus? was it in dissection? necusia? 23 <i>a</i> .
Abstraction of the brain (a bad term)	45—57.
Accident (vague)	See <i>Deaths by external causes</i> , and 137—145.
Adenitis	Inflammation of a gland, 33;
Age	Old age, 41.
Ague	15.
Air tubes (disease of)	See 69. Phthisis, 33 <i>g</i> .
Albuminuria	95.
Amaurosis	56.
Amenorrhœa	103.
Amputation	Of what part, and for what disease was it performed?
Anæmia	29 <i>a</i> .

- Anæsthesia
 Anasarca
 Aneurism of—
 Aneurism by anastomosis
- Angina maligna
 Angina pectoris
 Anorexia
- Anthrax
 Antrum (disease of)
 Anus imperforatus
 Aorta (disease of)
 Aphtha
 Apnœa
 Apoplexia
 Apoplectic fit
 Apoplectic paralysis
 Apoplexy on the lungs
 Apoplexy from inhaling impure air
 Apoplexy, brought on by want of common necessities
 Apoplexy from opium
 Arachnitis
 Arm (disease of)
- Arrest of development (vague)
 Arthritis
- Ascites
 Asiatic cholera
 Asphyxia
 Asphyxia from caries of the cervical vertebræ
 Asphyxia from engorgement of the lungs
 Asthma
 Asthma and dropsy
 Atony
 Atrophia
 Atrophy
 Atrophy of the heart
 Atrophy from the want of breast milk
 Back (inflammation of)
 Bad mouth (vague)
 Barbadoes leg
 Bastard croup
 Bed sores (a good term)
- Belly (inflammation *of* and *on*) (vague)
 Beriberi
- Bile (deficiency of)
 Bile (on the stomach)
 Biliary calculi
 Biliary obstruction (vague)
 Bilious affection, or complaint
 Bilious attack
 Bilious colic
 Bilious fever
 Bilious vomiting
 Black bile (vague)
 Black cramp (a bad term)
 Black fever
- 48 *a*.
 Dropsy, 30.
 61. Inquire of what vessel?
 Nævus. Inquire whether an operation had been performed for its removal, or under what circumstances it proved fatal?
 4 *c*.
 62.
 See 86. A symptom; inquire of what disease?
 Carbuncle, 132?
 107; 111. What disease? caries? cancer?
 43.
 Aneurism? 61.
 Thrush, 9.
 Privation of air; a better term than asphyxia.
 Apoplexy, 47
 Apoplexy, 47.
 Paraplexy? 48.
 Pulmonary apoplexy, 71 *a*.
 137 *h*.
 136.
 137 *a*.
 Inf. of arachnoid; meningitis, 45.
 Inquire *what* disease? scrofula? cancer?
 33; 35
 Of what part? 43.
 105. Is sometimes improperly used for "gout."
 30 *f*.
 12.
 From what cause? 141.
 141;
 71?
 72 *a*.
 72; 30.
 A vague term.
 Atrophy, 38.
 38.
 60.
 136; 38.
 Phlegmon? 133.
 Thrush, 9?
 128.
 Laryngismus stridulus, 68.
 Ulcer, 32. Mortification, 39. State the original disease.
 Enteritis, 80? peritonitis, 81?
 Said to be a spasmodic affection; not known in England.
 88—91.
 A bad term, 74—91.
 89 *b*.
 88—91.
 Diarrhœa? cholera? 10; 12.
 Cholera? diarrhœa? 12; 10.
 10; 82. Cholera?
 17; 16. Typhus? remittent fever?
 Cholera? 12.
 88—91. Melèna?
 Cholera? 12.
 Typhus? 17.

- Black jaundice
 Black thrush
 Black vomit
 Bladder (disease of)
 Bladder (inflammation of)
 Bladder (ulcer in)
 Blast (vague)
 Bleeding
 Bleeding from the bowels
 Bleeding at the navel
 Bleeding at the nose
 Bleeves (a bad term)
 Blister (irritation, inflammation, sloughing from)
 Blister pock (a bad term)
 Blood (discharge of)
 Blood (diseased state of)
 Blood (surfeit of)
 Bloody dropsy (vague)
 Bloody flux
 Bloody urine
 Blue disease
 Blue fever (bad)
 Body (disease of, inflammation of)
 Boil
 Bone (death of)
 Bone (disease of)
 Bone (inflammation of)
- Bowels (bleeding from the)
 Bowels (consumption of)
 Bowels (disease of)
- Bowels (inflammation of)
 Bowel complaint
 Bowel hives (a bad term)
 Brain (absorption of) (a bad term)
 Brain (disease of)
- Brain (inflammation of)
 Brain (disease of) and erysipelas
 -----gastritis
- Brain fever
 Brain (ramolissement or softening of)
 Breaking up of the constitution (bad)
 Breast (disease of)
- Bright's disease
 Brittleness of the bones
 Broken heart
- Bronchi (abscess of) (bad)
 Bronchi (inflammation of)
 Bronchial effusion (bad)
 Bronchial fever
 Bronchial ulceration extending to the lungs
 Bronchitis
 Bronchitis and broken rib
 Bronchocele
 Bronchorrhœa
 Bruised corn
 Burn
 Bursa (inflammation of)
- Jaundice, 89.
 Thrush, 9.
 Hæmatemesis, 28 *c*.
What disease? 97, 98.
 Cystitis, 98.
 32, and 97, 98
- Hæmorrhage, 28. From what part?
 Hæmorrhoids? *melæna*? 28 *e*; *d*.
 28.
 Epistaxis, 28 *a*.
- See Class 4. 39.
- Small-pox? *pemphigus*?
 From what part? 28.
 What is the nature of the disease?
 An unintelligible term.
 Dropsy, 30.
 Dysentery, 11.
 Hæmaturia, 28 *f*.
 Cyanosis, 43 *a*.
 Typhus? *cholera*? 17; 12.
 A bad term. *Prolapsus ani*? *P. uteri*?
 Furunculus, 132 *b*. Carbuncle?
 Necrosis, 112.
 What bone? What disease? 105—112.
 Periostitis. Syphilis? after injury? 105—
 107.
Melæna? hæmorrhoids? 28 *e*; *d*.
Tabes mesenterica? 33 *f*.
 What disease? enteritis? cancer? 74—86;
 35,
 80.
 Diarrhœa, 10.
Tabes mesenterica, 33 *f*.
 45—57
 To be used when the *nature* of the disease is
 not known. 45—57.
 Meningitis? encephalitis? 45.
 { Entries of this kind are unexceptionable, but
 the nature of the brain disease should be
 stated, if known, 45—57.
 Typhus? meningitis? 17 *a*; 45 *a*.
 45—48.
 From what cause?
 What disease? cancer? 35. Breast is some-
 times improperly employed for “chest,”
 and hence gives rise to confusion.
 Nephria, 95.
 109.
 Mental distress. Sometimes improperly used
 for rupture of the heart.
 Phthisis? pneumonia? 73; 71.
 Bronchitis, 69 *a*.
 Effusion of what lymph? blood?
 Influenza? bronchitis? 13; 17; 69.
 69, 73.
 69.
 How was the rib broken 169; 144.
 33 *i*.
 69 *b*.
 144. Phlegmon, 133.
 138 *b*.
 105.

- Bursting of a blood-vessel
 Bursting of a fallopian tube
 Bursting of a varicose vein

Febris typhoides	Paramenia? 103.
Felon	
Female debility (vague)	

Fever (vague)	The nature of the fever should be specified, 17 <i>a</i> .
Fever of abdomen (vague)	17.
Fever on the brain	Typhus ? 17.
Fever at the stomach	Gastric fever, 17, 19.
Fever (ephemeral)	17, 79, 80.
Fever (inflammatory)	Synochus, 17.
Fever (puerperal)	Metria, 18; and 104 <i>a</i> .
Fistula	In what part ? 32 <i>c</i> .
Fit (vague)	Epileptic ? apoplectic ? convulsion ? paralytic ? 52, 47, 54, 48.
Flooding	104.
Flox (bad)	Thrush ? 9.
Fluor albus	Paramenia, 103.
Fluid on the brain (bad)	What fluid ? and from what cause ?
Flux	Dysentery, 11.
Foramen ovale not closed	43.
Found dead (vague)	What disease, or injury, had been the cause of death ? It should be stated whether with or without marks of violence. Class 4.
Found dead in water (vague)	143.
Fracture and mortification	144.
Fragilitas ossium	Brittleness of the bones, 109.
Frenzy fever	45, 51.
Fright	By what cause ? Class 4.
Frog (bad)	Thrush ? 9.
Frost (ambiguous)	Thrush ? 9.
Frost in the stomach	Thrush ? 9.
Frostbitten	136.
Frox (bad)	Thrush, 9.
Frozen to death	136.
Fungoid disease	35.
Fungus	Fungus hæmatodes ? 35.
Fungus hæmatodes	35.
Furunculus	132 <i>b</i> .
Gall stone	89 <i>b</i> .
Gangræna	Mortification, 39.
Gangræna nosocomialis	Hospital gangrene, 39.
Gangræna senilis	Dry gangrene, 39 <i>b</i> .
Gangrene from a blister, burn, &c.	39 <i>f</i> , and Class 4.
Gangrenous erythema	22.
Gangrenous ulcer	Phagedæna, 32, 39.
Gastric fever	17.
Gastritis	79.
Gathering (vague)	An old term for " <i>abscess</i> ," 31.
General dropsy	30.
Giving out of the heart (bad)	60 ?
Glanders	24.
Glands (inflammation of)	Scrofula ? 33.
Glands (swelling of)	Scrofula ? 33.
Glands (bad)	Scrofula ? 33. Several entries occur in which neither the particular glands affected are specified, nor the nature of the affection.
Glass-pox	Small-pox, 1.
Glottis (disease of)	Phthisis ? 73, 33, 67.
Glottis (inflammation of)	Laryngitis, 67.
Gonorrhœa	Syphilis, 21.
Gouche (bad)	
Gout	34.
Granular disease of kidneys	95.
Gravel	97.
Gripes, Black Gripes	Dysentery, 11.
Gums (disease of)	What disease ?
Hæmatemesis	28 <i>c</i> .

Hæmaturia	28 <i>f</i> .
Hæmoptysis	28 <i>b</i> .
Hæmorrhagia (vague)	26. From what part? flooding?
Hæmorrhage in the intestines	Melæna, 28 <i>d</i> .
Hæmorrhage from the kidneys	Hæmaturia, 28 <i>f</i> .
Hæmorrhoids	28 <i>e</i> .
Hay fever, hay asthma	13. Influenza?
Head (disease of) (vague)	Brain? 45—57.
Head (inflammation of) (vague)	45.
Heart (disease of)	58—63.
Heart (inflammation of)	58 <i>a</i> .
Heart (rupture of) (vague)	Bursting of auricle or ventricle; from what cause? 61.
Heart (rupture of a blood-vessel of the) (vague)	28, 61.
Heart (rheumatism in the)	20, 58.
Heart (spasms of)	53 <i>c</i> . 63 note.
Heart hives (bad)	
Hectic fever	From what cause? phthisis? 73.
Hemiplegia	48 <i>a</i> .
Hepatitis	88.
Hepatization of lungs	71.
Hernia	Of what kind? congenital, femoral, inguinal, umbilical; Was an operation performed for its relief? 83.
Hernia cerebri	From what cause? 144, 145.
Herpes	116.
Hidrotic fever (vague)	Miliaria? 2.
Hip joint (disease of)	105—112.
Hip joint (dislocation of)	From what cause? 144 <i>c</i> .
Hip joint (inflammation of)	Arthritis, (hip) 105.
Hives (vague)	{ Is an objectionable term; as it is used without uniformity of meaning in different parts of the country.
— in the bowels, heart	
Hooping-cough	7.
Hooping-cough—pneumonia	7; 71 <i>b</i> .
Hospital gangrene	39 <i>c</i> ; 23 <i>c</i> .
Hunger	Starvation, 136.
Hydatids	In what part? 44?
Hydrarthrus	White swelling, 105; note after 112.
Hydro-pericardium, or Hydrocardia	From what cause? 30 <i>e</i> .
Hydrocele	30 <i>g</i> .
Hydrocephalus	30 <i>i</i> ; 46.
Hydrophobia	25.
Hydrops	30.
Hydrops ovarii	30 <i>h</i> .
Hydrorachitis	Water on spine, 46.
Hydrothorax	30 <i>d</i> ; 70 <i>b</i> .
Hypertrophia	Hypertrophy of heart, 60 <i>a</i> ,
Hypertrophy of the left ventricle.	60.
Hypochondriasis	51 <i>b</i> .
Hysteria	52 <i>b</i>
Hysterical fits	52 <i>b</i>
Hysteritis	102.
Icterus	Jaundice, 89 <i>a</i> .
Icthyosis	127.
Idiocy	51 <i>d</i> .
Idiotismus	Idiocy, 51 <i>d</i> .
Ignis sacer	Erysipelas, 22 <i>a</i> .
Ileus	82 <i>a</i> .
Iliac passion	Ileus, 82 <i>a</i> .
Illness, long (bad)	What was the illness?
Impastment of the stomach (vague)	74—91.
Imperfect organization of the lungs	What was the nature of the "imperfection?" 43.

Imperforate anus	43 c.
Impetigo	120.
Imposthume	Abscess, 31.
Inanition (vague)	Is variously applied in different parts of the country, (see 136.)
Inclemency of the weather	136.
Income (vague)	Abscess, 31.
Incontinentia urinæ	Incontinence of urine, 99.
Indentation of the spine (vague)	110 b; curvature of the spine
Indigestion	Dyspepsia, 86 a.
Induration of liver	Cirrhosis? 90.
Infancy (disease of) (bad)	What disease?
Infantile fever	80.
Infantile remittent fever	80.
Infection (bad)	What kind of infection? Class 4.
Infection from a glandered horse	Glanders, 24.
Infection of the bowels (bad)	What disease of the bowels? 74—91.
Infiltration of urine	From what cause? violence? stricture? 97—103; 144.
Inflammation (vague)	There are entries in which the part inflamed is not specified; and others in which the parts are vaguely stated. Inflammation may take place in any part of the living body; and the parts affected should be registered in precise terms. It will be observed that inflammation of a part is generally denoted by the termination "itis;" thus, <i>peritonitis</i> is inflammation of the peritoneum.
Inflammation accelerated by a fall (vague)	144.
Inflammation caused by a scald	Scald, 138 a.
Inflammation arising from vaccination	1. What inflammation?
Inflammation of abdomen (vague)	Peritonitis? 81 a.
———— the air tubes	Bronchitis, 69 a.
Inflammation of the aorta (?)	64.
———— arm	From violence? 144; phlegmon, 133?
———— arteries	Arteritis, 64.
———— back (vague)	Phlegmon? 133; erysipelas? 22 a.
———— belly	Peritonitis? 81.
———— bladder	Cystitis, 98 a.
Inflammation of or in the "body" (vague)	Rectitis? 33 h. hysteritis? 102.
Inflammation of the bones	107, Ostitis? arthritis? 105.
———— brain	45 a.
———— breast (vague)	71, Chest? female breast, 104?
———— bronchi	Bronchitis, 69 a.
———— caul (vague)	Omentum?
———— cellular tissue	Phlegmon, 133.
———— chest (vague)	Pneumonia? 71 b; pleurisy? pericarditis? 70 a, 58 b.
———— colon	Dysentery? 11.
———— digestive organs	Enteritis? peritonitis? gastritis? 80, 81, 79.
———— duodenum	Duodenitis, 80.
———— ear	Otitis, 57.
———— epiglottis	Epiglottitis.
———— eye	Ophthalmia, 56.
———— fauces	Pharyngitis, 77.
———— glands	Scrofulous? 33.
———— glands of the throat (vague)	Mumps? 6; scrofulous? 33.
———— visceral glands (vague)	Tabes mesenterica? 33 f.

Inflammation of the glottis	Laryngitis, 67.
_____ in or on the groin	Syphilis? 21.
_____ of the gums	From teething? 74.
_____ head (vague)	Cephalitis? 45 c.
_____ heart	58 a.
_____ internal mem- brane of the bowels	Enteritis, 80.
_____ internal mem- brane of the heart	Endocarditis, 58 c.
_____ internal coats of the stomach	Gastritis, 79.
_____ intestinal canal	Enteritis, 80.
_____ iris	Iritis, 56.
_____ joints	Arthritis, 105.
_____ kidneys	Nephritis, 92.
_____ larynx	Laryngitis, 67.
_____ in the legs (vague)	133; 106; 105; phlegmon? rheumatism? arthritis?
_____ of the lining mem- brane of the lungs	Pleurisy, 70.
_____ liver	Hepatitis, 88.
_____ loins (vague)	106, rheumatism? nephritis, 92
_____ lungs	71, pneumonia.
_____ lungs caused by fracture of the ribs	144; 71.
_____ lungs and liver	71, pneumonia; 88, hepatitis.
_____ lymphatics	Phlebitis? From the absorption of pus after delivery, or an operation? 23; 104.
_____ membranes of the body (bad)	Which of the membranes?
_____ membranes of the brain	Meningitis, 45 a.
_____ membranes of the heart	58 b, Pericarditis? endocarditis? 58 c.
_____ membranes of the stomach	79—81, gastritis?
_____ milt	Splenitis, 87*.
_____ mouth	Stomatitis, 75 b.
_____ muscles	Myositis.
_____ navel	133, erysipelatous? 22.
_____ nerves	Neuralgia? neuritis? 55 b.
_____ œsophagus	Œsophagitis, 78.
_____ ovaries	After delivery? 104.
_____ pancreas	Pancreatitis, 87 a
_____ pelvis (vague)	After delivery? 104.
_____ pericardium	Pericarditis, 58 b.
_____ periosteum	Periosteitis, 107.
_____ peritoneum	Peritonitis, 81 a.
_____ pleura	Pleuritis, 70 a.
_____ pylorus	79.
_____ rim of the belly	70 a, diaphragmitis? 81 a, peritonitis?
_____ scrotum	After an operation for hydrocele? or from what cause?
_____ shoulder (vague)	Arthritis in the shoulder? 105.
_____ in or on the side (vague)	Pleurisy, 70 a.
_____ of the spinal marrow	Myelitis, 45 d.
_____ spine	Arthritis, 105; or myelitis? 45 d.
_____ sternum	Breastbone, 107.
_____ stomach	Gastritis, 79.
_____ tendons	Which tendons? and from what cause?
_____ testes	Orchitis, 101.
_____ thorax (vague)	Pneumonia? 71; pleurisy; 70; pericarditis? 58 b.

- Inflammation of the throat
 ————— on the tongue
 ————— of the trachea
 ————— uterus
 ————— vagina
 ————— veins
 ————— of vein of right arm
 from bleeding
 ————— of the visceral gland
 (vague)
 ————— windpipe
 ————— womb
 Inflammatory fever
 Influenza
 Injured in the birth
 Injury causing erysipelas, lock-jaw,
 mortification, &c.
- Inopia
 Insanity
- Instrumental delivery (vague)
 Intemperance
 Intermittent fever
Internal congestion (bad)
Internal disease (bad)
Internal effusion of blood } (vague)
 ————— hæmorrhage }
 Interruption of the bowels (vague)
 Intestinal canal (disease of)
- Intestinal irritation
 Introversion of the bowel
 Invagination of bowel
 Iritis
 Irritability of the stomach (vague)
 Irritation (vague)
Irritation of the bowels (vague)
 Irritative fever (vague)
 Ischuria
 Ischuria urethralis
 Itch
 Itis
- Jail fever
 Jaundice
 Joints (disease of)
- Kidneys (inflammation of)

- King's evil
 Labour (difficult)
 Lactation
 Laceratio
- Laceratio cordis
 Land scurvy
 Laryngeal consumption
 Laryngismus stridulus
 Laryngitis
- Quinsey? 76.
 Glossitis? 75 *a*.
 Tracheitis, 69.
 Hysteritis after childbirth? 104.
 Of what nature? 21.
 Phlebitis, 65.
 145.
 Tabes mesenterica, 33 *f*.
 Tracheitis, 69.
 Hysteritis, after childbearing? 104.
 Synochus, 17.
 13.
 Violence. Class 4.
 Are correct entries, but the mode in which
 the injury was produced should be in-
 dicated. Class 4.
 136.
 Mania? monomania? dementia? 51; any
 concomitant disease?
 104.
 135.
 Ague, 15.
 Of what part?
 Of what part?
 Into what part? 28.
 Ileus, 82? constipation?
 To be used when the nature of the disease
 is not understood (74—86).
 Enteritis, 80? diarrhœa, 10?
 Intussusception, 82 *b*.
 82 *b*.
 From syphilis? 56.
 79—81; 86.
 Enteritis, 80? diarrhœa, 10?
 After an operation? phlebitis? 65.
 93.
 Stricture of the urethra, 100.
 Scabies, 27.
 A termination denoting "inflammation;"
 thus gastritis, inflammation of the stomach,
 is formed by adding "itis" to "*gaster*,"
 the stomach.
 17.
 89 *a*.
 State what joint? To be used only when
 the nature of the disease is not known,
 105—112.
 Nephritis, 92.
 To be used only when the *nature* of the dis-
 ease is unknown, 92—100.
 Scrofula, 33.
 104.
 104. What disease did it cause?
 Laceration. From what cause? 144. Of
 what organ?
 144, 61.
 Purpura? 14 *b*.
 With tubercles in the lungs? 73.
 68.
 67.

- Larynx (disease of)

PART II.

XI. A LETTER ADDRESSED TO CORONERS, WITH OBSERVATIONS ON THE REGISTRATION OF THE CAUSES OF VIOLENT DEATHS.

(CIRCULAR.)

*General Register Office,
10th August, 1845.*

SIR,

I HAVE the pleasure of transmitting to you a copy of my Sixth Annual Report, and I beg to direct your attention to pp. 210-266, in which I have given an abstract of the causes of the violent deaths in England, chiefly derived from the “informations” which you and the other coroners have given under the Registration Act.

In order that the results of the “informations” may be compared, and become really useful to the public, in pointing out the causes of violent deaths (which appear to be of much more frequent occurrence in this kingdom than in the rest of Europe), the nature of the fatal cases inquired into by juries must be described somewhat more in detail than is done at present. In many “informations” all the facts that can be useful are stated; and it is only required that the practice, already partially existing, should be extended and made uniform, to place the whole upon a satisfactory footing.

You will observe, by referring to the Abstracts, pp. 234-6, that, exclusive of suicides, executions, some doubtful cases omitted, and 971 imperfectly returned in one year, 3305 persons were killed by mechanical injuries of various kinds—by falls, falls of stone, &c., machinery, railways, waggons, carriages, horses, and other agencies—fracturing their bones or crushing their bodies; 1950 lives were lost by water (drowning); 3057 by fire (148 by explosions, 2577 by burns, 332 by scalds); 188 persons were accidentally poisoned; 65 were murdered in ways not stated in the “informations;” and there were 83 cases of manslaughter.

It is believed that, although deaths by personal violence have diminished, poisoning, the violence called accidental, and the resulting dangers, have increased within the present century;—which may be ascribed to the number of deadly poisons now so accessible in every chemist’s shop, the introduction of the new force of steam, the redoubled activity of traffic, travelling, navigation, agriculture, manufactures, and mining operations. Science itself creates new instruments of death. But if these instruments be brought to light by your inquests, described accurately, and placed fully before the public, science will find no difficulty in discovering

remedies, or rendering less harmful the new and striking, as well as the old and obscure, causes of violent death, which have made little noise, but have been in operation from time immemorial in every county of the kingdom.

It is to discover the dangers attendant on the occupations, pursuits, and various circumstances in which the population is placed, that I request your aid, in the hope that, if the causes of death are ascertained, additional security may be thrown around human life, and thus the great object of the coroner's inquest be promoted by the Registration Act.

The circumstances in which violent deaths happen are so various that it is impossible to suggest any general rule for the registration of every case ; but if the great object of the "information" be kept steadily in view, little difficulty will be found in returning the "causes of violent death" in a manner sufficiently explicit and uniform to admit of comparison and analysis. In the accompanying paper, I have noticed the most important particulars required, and some of the defects and omissions which deprive many of the "informations" of that value and specific character which they should possess in conformity with the clause of the Registration Act requiring juries, under the direction of the coroner, to inquire into the "cause of death."

I have given a few specimens also of the better class of returns. Having taken the liberty of thus calling your attention to the points which I consider important in returning the causes of violent death, I confidently anticipate that for the future, in all cases in which inquests shall be held, the finding of the jury, as recorded in the register books of deaths, will contain all the particulars which it is desirable to ascertain.

I have the honour to be,

Sir,

Your faithful Servant,

GEORGE GRAHAM,

Registrar-General.

To the Coroner of _____

XII. OBSERVATIONS ON THE REGISTRATION OF THE CAUSES OF VIOLENT DEATHS.

THE Registration Act has made it imperative in England to investigate and record the CAUSES of every person's death.* The object of the inquiry is, that the precise nature of these causes may be determined; that they may be carefully analyzed; and that means may hence be devised for guarding against their effects, and for throwing additional security around human life. To be of any use in improving the public health, preventing crime, and advancing medical science, the INQUIRY into *the causes of violent death* must be complete, and must include three classes of "particulars."

The questions to be proposed in reference to every case of death ascribable directly to external causes, are, (1.) Was the death caused by human agency? Did the person die by his own hands, or by the hands of other persons? or was his death accidental? (2.) What was the instrument, force, or thing by which death was caused? (3.) What was the nature of the fatal injury inflicted upon the body? The *time* that the person lived after the injury, and the *place* in which it was received, also demand attention.

1. *The first class of facts comprised under the "Cause of Death," has reference to persons. It is the legal point of view.*

The deaths caused by human agency are referred to several heads:—(1) Suicide, *felo de se*; (2) Murder, infanticide, fratricide, parricide;† (3) Manslaughter; (4) Excusable homicide; justifiable homicide; (5) Execution.

As well as the social and blood relationship of the person killed and the person who kills him, the circumstances in which the two parties are placed constitute important distinctions; he or they may be engaged at the time (*a*) in a chance fight, or pitched battle; in a duel, or in war; (*b*) in rebellion, incendiarism, smuggling, piracy, poaching, highway robbery, burglary, or in suppressing any of these crimes; a person may commit murder, and then kill himself; he may be a prisoner, or a deserter. (*c*) Persons sometimes die after surgical operations voluntarily submitted to for the relief of disease; (*d*) women are sometimes

* 6 and 7 Gul. IV. c. 86, and Schedule B.

† The latter forms of murder have not been recognized as distinct offences in English law; and the distinction has been abolished between murder and *petit treason*, or the murder of the master by a servant, the husband by the wife, the superior by an ecclesiastical person, 9 Geo. IV. c. 31. "To compass or imagine the death of our Lord the King, of our Lady his Queen, or of their eldest son and heir," is *high treason*, 25 Edw. III. c. 2.

killed by injuries in childbearing, or by attempts to procure abortion.

Violent deaths may thus be caused indirectly as well as directly, unintentionally, intentionally, or negligently, when the "man-killer" did not intend to do any harm, or when he intended only to punish, or to inflict an injury of a kind not usually fatal; when he or the person killed was acting legally or illegally. A man may kill his adversary in self-defence (chance medley).^{*} The motives which lead to the commission of murder and of suicide are an important link in the chain of causes.[†]

The condition of the person's intellect when death happens is also observed; he may be in a state of insanity, or of intoxication; in an epileptic fit, or asleep (sleep-walking).

Deaths by physical causes, or accidentally by men, are generally called "Accidental;" which by itself is not sufficiently explicit.

Few violent deaths can happen in which at least one or other of the circumstances in this class of facts should not be recorded. When no information can be obtained, it should be so stated.

2. *The second class of facts has reference to things: to the instruments employed where human agency is concerned; in other cases to the animals, machines, and ordinary mechanical forces or bodies of nature. With reference to the public health it is the most important head of inquiry.*

Death is caused by wounds, stoppage of breathing, burns, starvation, poison; and it is impossible to enumerate all the various ways in which, or the things by which, such fatal injuries are caused; but the following classed list of those which have been mentioned in the Returns, with some additions, may serve to fix attention on the many details which have to be attended to.

WEAPONS and INSTRUMENTS employed by MEN:—Sword, dagger, knife, razor, lancet, "fork thrown at," a club, bludgeon, "the fist"—whip (flogging):—pistol, gun, cannon (burst, shot, ball).

ANIMALS, domestic or wild:—Dog (bite of), (inflammation, lock-jaw after bite of), hydrophobia[‡] (—— weeks after bite of ——); bite of a viper, rat, boar; bull, cow (tossed, dragged, gored by); bites, &c., of other animals.

^{*} "Chance medley is properly applied to such killing as happens in self-defence upon a sudden rencounter."—*Blackstone*, B. 4, c. xiv. "Chance medley is often erroneously applied to any manner of homicide by misadventure:" as in the following verdict—"Chance medley by laudanum."

[†] The presumed motives of the criminals are stated in the French criminal returns.

[‡] The number of hours, days, or weeks intervening between the bite of the rabid animal and the appearance of hydrophobia, and between the first attack of disease and death, should be invariably recorded.

HORSE, Mule, Ass—thrown by, run away with, dashed against — by, run over by, kicked by,—in hunting, racing, &c.:—**WAGGON**, cart, timber-carriage, stage-waggon, van, gig, phaeton, private carriage, coach, cab, omnibus, stage-coach—(*the person* thrown off, fallen off, run over by, run against and crushed by), (*the vehicle* upsetting, run away with and dashed against —).

RAILWAYS—fall of embankments, cuttings, bridges, tunnels;—**RAILWAY CARRIAGES**—thrown off;—run over by (while at work, on duty or not, on the line); run against and crushed by, “jammed between two carriages;” upsetting, running off the line;—**steam-engine** — boiler exploding, setting fire to carriages, scalding. The name and part of the railway should be invariably returned.

INCLINED plane (“fall off”).

STEAMERS, SAILING VESSELS, BARGES, BOATS, SHIPS:—Injuries in dockyards, “fall from docks,”—falling overboard,—from mast, “from ships’ yards,” “into the hold,” “crushed between two vessels,” “mast falling on,” “entangled in machinery,” “steam-boiler exploding, setting the ship on fire;” upsetting of pleasure-boats, barges, &c.;—shipwreck. The name of the ship, or steamer, should be stated; also the description of vessel—colliers—foreign traders, &c.

DWELLING HOUSES—fall of, fall from scaffolding in building, fall from the roof, fall of bricks, from windows, down stairs, over banisters, into cellar; “fall from bed-room window asleep;” fall of chimney; burnt by the house taking fire.

WORKS—iron, copper, brass, lead, dye, print, bleaching, glass, china, earthenware (potteries).

Factories—cotton, silk, woollen, flax, &c.

Mills—flour, paper, bark, saw, &c.

Machines—thrashing, &c., water-wheel, windmill sails, horse-gin, windlass, capstan, &c.

Steam Engine—(a) explosion of boiler, (b) the engine itself. Fly-wheel, beam, connecting rod, piston rod, governor ball, &c.

Gearing—shafts, wheels, pulleys, straps, &c.

Machinery in Iron, &c. works—machine straps, rollers, planing-machines, lathes, drills, punches—rivetting, wire-drawing, pipe-drawing, &c., machines.

In *Print, Dye, and Bleaching works*—washing-wheels, printing and calendering machines.

In *Cotton Factories*—beater, devil, carding-machine, roving, stretching, doubling, throstle frame, loom mule, dressing machine.

In *Silk Factories*—throwing, reeling, winding, doubling, spinning-machine, loom, &c.

In *Woollen Factories*—combing, carding, teaseling, shearing, slubbing, roving, spinning, fylling-machines.

In *Flax Factories*—heckling, roving, doubling, spinning, &c. machines.

Miscellaneous machinery, or such as is used not in actual manufacturing, but in auxiliary processes, such as teagles, cranes, hoists, grindstones. Also mercury, lead, acids, alkalis, and other chemical agents, which are causes of death in manufactories, &c.

[The name of the work, or of the owner of the work, factory, or machine, should always be stated, as in the following instance : —“Laceration of the scalp by a carding machine in John Holt’s factory—lived 9 days ; erysipelas, 5 days.”]

MINES and COAL-PITS—State the department the deceased was engaged in, under “rank or profession”—distinguishing the “viewer,” “overman,” “back-overman,” “hewer,” “putter,” “trapper,” “crane-boy,” “rolley-driver,” “rolley-way-man,” “Davy lamp-keeper,” “furnace-man,” “stable-keeper,” “wasteman,” “shifter,” “onsetter,” “banksman,” “brakesman,” &c.

Falls—in “shaft,” “stapple,” “drift, or water-level,” “waste,” “rolley-way,” “tram-way,” “goaf,” “workings”—men falling through rope having been cut or broken when “riding away” (descending, &c.) or breaking of “pit chain,” or “slipping of knot,”—fall down “coal-pit shaft,” or “stapple,” &c.

Falls—of stone or coal ; of roof of mine ; of “coal-pit tub ;” “corfe,” “kibble,” “prop,” “pick,” “hammer,” &c.

Blows—when driving in dark or light, by “crane-handle,” “rolley,” “tram,” “blasting stone or coal,” “hewing,” “drawing a jud,” blows of “capstan,” of swingle-tree, of gin or winsey, pit machinery, stamp mills, or steam-engine, &c.

Explosion—State whether killed by the direct effect of fire, or from suffocation by the “after-damp,” “choke damp,” or “styth”—either immediately after the accident, or at a later period in rendering assistance, &c. State where the explosion happened, in the “waste,” “face of workings,” or “goaf,” &c.—whether “Davy lamps,” “raw lights,” or “flint mills,” were in use when the explosion happened—whether the mine had one shaft or more. In explosions fatal to many lives, note the diameter of the shaft and the acres of royalty ; and whether the ventilation was conducted by a furnace or lamp, the method “simple,” “scaling,” or “compound ;” whether the mine was working in the “whole, or the broken.” The name of the mine, and the owners’ names should be always recorded.

Drowning—in mines—where was the water from ? What caused the accident ? Was the shaft to the rise or the dip of the coal field or “seam” ? Did the seam keep a “water engine,” and of what power was that engine ?

QUARRIES :—“Roof of a quarry falling in,” “stone falling in,” “fell into a quarry.”

FALL of heavy substances :—Fall of stones, of limestone, “a piece of marble,” marl, sand : brick wall, “part of a new chapel,” a theatre, a bridge, “an arch ;” “a piece of timber,” “wood,” “a pile of deals,” “a beam ;” “a box of soap,” “a bale of cotton,” “a box of sugar ;” “a mallet ;” “a crane,” “a rope,” “a boat,” “a piece of iron.”

FALLS—from a ladder, scaffolding, “a rock,” “a tree,” a monument, a church tower, a steeple, an arch, a railway arch, a mill window, a wall, through a trap-door in the street,—in a malthouse; falls in running, skating, walking in *frosty weather*; “jumping from a building on fire;” falls in wrestling, jumping, running; falls into a pit, a saw-pit, a cave, a “stone delph,” from a wall “on a hand-staff which ran into his body,” “on the spikes of iron railings,” from the quay on a boat; falls in an epileptic fit, in a state of intoxication, &c.

The breath is stopped in many forms of death, as in drowning, hanging, strangling, suffocation, choking, and inhaling mephitic gases. The general term which designates this mode of death is asphyxia or apnœa.

WATER:—**DROWNING**—(a) in bathing, skating, from falling out of boats, ships, &c.; jumping overboard; upsetting of boats, &c.; shipwreck, &c. (see Steamers, p. 319); (b) in the sea, a lake, river, canal, pit, pond, mill-dam, well, draw-well, clay-pit, cistern, a tub of water, “a tub of ale,” &c.; “a child drowned in the uterine fluid of the mother;” “fell into canal while drunk,” “fell into a vat of lime-water and ashes,” “drowned herself in a tub,” “suffocated in a ditch,” “suffocated by falling into mud in a fit.”

HANGING—with a cord, a pocket handkerchief, &c.,—on a tree, a bed-post, &c. State whether the body touched the ground.

STRANGLING—with a cord, a handkerchief, a handkerchief tightened by a stick, &c.; “by the head passing through the rails of a chair.”

SUFFOCATING—overlaying by mother, brother, nurse, &c.; by stopping the mouth and the nostrils with the hand; smothered in a turn-up bed, &c.; “smothered by a hut falling on her,” “smothered by falling while drunk out of a loft into a cratch of hay;” smothered by compression and being trampled on in a crowd; “suffocated by fixed air in the stomach produced by soda water.”

FOOD: **CHOKING**—by meat, by a fish-bone, an oyster, a cherry-stone, a pea, a bean.

Killed by a nail, a half-sovereign, a pin falling into the windpipe.

MEPHITIC GASES—irrespirable or poisonous: carbonic acid—fixed air—in mines, graves, wells, chambers—the vapour of charcoal, of brick-kilns, of fermenting liquors, in brewers’ vats, &c.; nitrogen in wells, vaults, holds of ships; carburetted hydrogen, sulphuretted hydrogen, in mines, water-closets, sewers; “a sweep (age 9) suffocated in a flue.”

LIGHTNING—struck by, or killed by the fall of other bodies struck by lightning. [It should be stated in all cases whether the person was found alive and conscious,—where he was struck,—whether under a tree, or in a house, &c., and the nature of any visible injury on the body, and any circumstances which can explain the course the lightning took, or the death, should be briefly recorded.]

EXPLOSION—of gunpowder, of powder-mills, of fire-damp, of gas (for lighting) in mines, houses, &c.; in blasting, discharging fire-works, &c. [The cause of the explosion should be stated.]

FIRE—of houses, buildings; the clothes taking fire. [The way in which the fire originated and the article of dress, &c., that caught fire, should be stated.] “Clothes set on fire by another child;” “burnt herself in a fit of insanity.”

HOT WATER—“Falling into a vessel of hot water;” kettle of boiling water, saucepan, vessel of hot water—falling on; steam from steam boiler; drinking boiling water out of a kettle; “drinking hot coffee;” “falling into a brewery of scalding alewort;” “falling into new-slaked lime.”

POISON—Sulphuric acid (oil of vitriol), nitric acid (aqua fortis), hydrochloric acid, oxalic acid, arsenic (oxide), corrosive sublimate, and the other compounds of mercury, verdigris, sulphate of copper (blue-stone), sulphate of zinc, nitrate of silver,—lead (acetate, carbonate),—baryta (hydrochlorate, carbonate)—cantharides, opium (solid), laudanum, muriate or acetate of morphia, hydrocyanic (or prussic) acid [state the strength of this acid], oil of bitter almonds—belladonna (berries of deadly nightshade), hemlock, henbane, tobacco, monkshood, foxglove (*digitalis*), strychnia, nux vomica, cocculus Indicus, fungi, alcohol.

[In all cases state the particular poison, and the dose when known; also the time elapsing between its administration and the person's death.]

MEDICINES—in over doses—taken or given; quack medicines.

SUBSTANCES swallowed, acting as irritants; “a piece of tin,” “a pewter tea-spoon,” “a piece of wood,” “a pin swallowed causing ulcer of the stomach,” “eating cucumbers,” “eating blackberries,” “convulsions from eating peas,” “drinking cold water when heated.”

DRINKING a large dose of spirits; **INTOXICATION** by spirits, wine, or ale; habitual intemperance; “apoplexy from drinking;” “hanged himself when delirious from drink;” “drunk, fell into the — canal and was drowned.”

STARVATION—exposure to the inclemencies of the weather; lost in a snow storm on —; frozen to death; privation of warmth and food; “lost in a lane, and died from cold and starvation;” “fell into a pit and was starved by cold;” “disease of liver and want of necessaries;” want of the necessaries of life through—[here add the cause.]

3. *Physical injuries, causing death, constitute the third class of facts.* It is the *medical* point of view.

FRACTURE—simple, compound, comminuted, of the skull, spine, pelvis, thigh, leg, ankle, arm.

RUPTURE of liver, lungs, spleen, gall-bladder, stomach, intestines, bladder; concussion of brain, of spine; contusion of any part; wound (gun-shot wound, stab, cut, lacerating wound of any part); artery or vein divided, and loss of blood; burns; scalds; blisters; any diseases—inflammation of any part, ulceration, mortification, erysipelas, lock-jaw.

In childbearing women—rupture of uterus; other injuries in delivery.

In new-born children—crushed at birth; killed immediately after birth, by a blow; suffocated; strangled; umbilical cord untied, bled to death.

4. The PLACE in which every death occurs is to be registered; with regard to accidents not immediately fatal—after which the sufferers die in hospitals or at home—it is right in almost all cases to state *where the fatal injury was inflicted*. The railway, canal, river, mine, factory, building, steamer, coach, &c., should be distinguished by its proper name.
5. The TIME the person lived after a mechanical injury of any kind—or after burns or scalds—should be noted; the *time* he was submerged in drowning, or suspended in hanging; and the time he lived after taking poisons, should, for the many purposes of medical jurisprudence, be ascertained and recorded.
6. The *rank* and *profession* of the person should be particularly described in the column having that heading.

It often happens that a complication of causes conspires to produce death; for instance, a person “*falls*—on a knife;” the most common cases of drowning are “*falling*—into the water;” in houses on fire the victims are generally suffocated by the smoke before the body is burnt; two or three kinds of poison are sometimes taken together, or shortly after each other, and then other means of destruction are resorted to. Any cause in the first class may be combined with almost any cause in the second, and that again may cause any injury or disease in the third class; hence the combinations of the three classes of causes are innumerable. Thus, if we take *Suicide* in the first class, it will be found that suicide has been committed in every variety of circumstances, with almost all the things and in almost all the ways specified in the second class; while with the several instruments selected, wounds and injuries have been inflicted on all the important organs of the body. So of *Murder*.

CARE SHOULD BE TAKEN THAT EVERY RETURN OF A VIOLENT DEATH ANSWERS THE THREEFOLD INQUIRY INVOLVED UNDER “THE CAUSE OF DEATH;” *namely*,—

(1) WAS THE DECEASED KILLED BY HIS OWN ACT, OR BY THAT OF OTHER PERSONS, AND IN WHAT CIRCUMSTANCES?

(2) WHAT WERE THE MEANS, INSTRUMENTS, OR THINGS BY WHICH THE FATAL INJURY WAS PRODUCED?

(3) WHAT WAS THE NATURE OF THE MORTAL INJURY, AND WHAT TIME ELAPSED BEFORE DEATH?

OR HAS ON THE FACE OF IT AN EXPLANATION OF THE OMISSION.

AT THE SAME TIME THE STATEMENT SHOULD BE MADE AS CONCISE AS IT IS CLEAR AND COMPREHENSIVE: NO VAGUE OR UNNECESSARY WORD SHOULD BE INSERTED.

The following are examples of Returns of Violent Deaths, which leave little to be desired :—

Accidentally run over by a cart, while trying to stop a runaway horse—fracture of his skull, ribs, &c.—lived 10 hours.

Accidental fall from a ladder, by which his skull was fractured—lived 2 days.

Murdered by — in a duel, with a pistol ball ; lungs perforated ; lived 3 days.

Erysipelas from a wound in the leg, caused by the falling of a bar of iron, which struck him on the heel while at work—wound 9 days—the erysipelas 6 days before death.

[The statement in this and similar cases implies that the injury was *accidental*. The word “accidental” is superfluous, except where a person is killed directly, but accidentally, by human agency.]

Accidentally trod on by a dray horse ; chest crushed ; lived 5 minutes ; (a child, age 2 years).

Accidentally drowned by falling from a schooner into the Thames. Under water 6 minutes.

Drowned by the *accidental* upsetting of a boat on the Thames—3 days in the water.

Drowned by *accidentally* falling into the Regent’s Canal, while stepping from one boat to another. Under water 1 hour.

Accidental, from two logs of timber having fallen upon him—ruptured bladder (5 days). *p. mort.*

Accidental fall—wrist cut by a flint—followed by inflammation. (Lived 9 days.)

Suicide, with a knife, after stealing riband in a linendraper’s shop—insane (?) at the moment of suicide. (Lived 1 hour.)

Accidental cut through the skull, and deeply into the brain, by a circular saw in a saw-mill. (Died in a few minutes.)

Irritation and exhaustion consequent on a fracture of the arm, by a fall from a South-Western Railway carriage in motion. (Lived 5 weeks.)

Poisoning with arsenic, and exposure to that substance during work in a candle manufactory. [The effects of the poison should have been stated.]

Exhaustion, following a burn of the arm, 19 days since—the shirt sleeve caught fire over a candle.

Erysipelas of the arm, following accidental application of sulphuric acid to the fingers. (3 days.)

Temporary insanity—2½ oz. of laudanum, and strangulation with handkerchief.

Drowned by the *accidental* tilting and sinking of an overloaded boat, containing the deceased and others. Under water 3 hours.

Accidentally suffocated by inhaling the vapour of charcoal on board of a ship—exposed to the vapour 5 hours. [The name or description of ship should have been inserted.]

Suicide by arsenic—probably 20 grains in one dose—lived 20 hours.

Accidentally burnt by her clothes taking fire. [The particular articles of dress—gown, apron, cap, &c.—which took fire should be specified.]

Strangled with a cord, by the mother—wilful murder. [The mere term “Wilful Murder” is not sufficient. It is most important to specify the manner in which, and when known, the person by whom—the murder was committed.]

A blow on the head by a fall from an omnibus. [In this case the injury which was the effect of the blow could not be ascertained.]

Blows by John Downey—manslaughter. [Whether in a quarrel, prize-fight, &c., should have been stated.]

Leg crushed by machinery in Samuel Smith’s silk factory; lived — weeks; abscess, 3 weeks.

Eye struck by a shuttle in Samuel Brown’s woollen factory; lived — weeks; meningitis, 3 days.

Fracture of the skull, caused accidentally by a brick falling on him whilst descending a coal-pit shaft.

Accidental and instant death by being knocked down a coal-pit shaft by the swing-tree of a gin.

Wound and fracture of the jawbone from his clothes getting entangled with the spindle of a grinding stone at — iron works.

Fracture of the skull from his being seized with a fit, and falling out of a skip down a coal-shaft.

Overdose of Godfrey’s Cordial, administered by mistake for syrup of rhubarb.

Poisoned by laudanum—no evidence to show whether by intention on the part of the mother.

Arsenic taken by herself through ill-treatment of her job mother.

Stroke of lightning in the Finchley-road—lived! 4 hours—symptoms like the stupor of apoplexy—no morbid appearance found in any cavity of the body; but two slight burns were discoverable on the inner side of the fore-arm.

Accidental, from a compound fracture of the right thigh, occasioned by slipping into the moving machinery of a steam-engine, when on board of a steam-boat.

Hæmorrhage into the abdomen from accidental rupture of the liver, by crushing between two waggons on a railway train, while there at work. [The name of the railway should be given.]

Found dead in bed, apparently suffocated,—without marks of violence.

Imperfect Returns of the Causes of Violent Death.

“Accident.”

“Accidental”—“accidental death;” “accidental by his own carelessness.” [*Imperfect.*]

These cannot properly be called returns of the causes of death.

They neither state the *nature* of the accident, nor the nature of

the injury. Was the "accident" in a mine, a steamer, or a factory, or was it on a railway?—Was it fracture, drowning, a burn, or poisoning, that caused the death? It is not necessary to mention other vague returns of the same kind, which leave the same questions unanswered.

"Wilful murder;" "manslaughter;" "justifiable homicide;" "felo de se;" "suicide." [*Imperfect.*]

All returns of this kind are imperfect. No mention is made of the means by which the "murder," for instance, was caused. Was it by strangling, a wound, a blow, drowning, shooting, or poison? In many cases other circumstances are required to be stated, in order to give a correct account of the "cause of death."

"Fracture of the skull;" "fracture of jawbone;" "a burn;" "rupture of diaphragm;" "suffocated." [*Imperfect.*]

Returns of this kind are imperfect. It is the exclusively medical view of the cases. The causes of the "fractures," &c., are not specified; nor the circumstances in which the injuries happened. Were they accidental deaths, suicides, or murders?

"Lock-jaw;" "erysipelas;" "mortification;" "delirium tremens."

Returns of this kind are "*imperfect*" when it is not stated whether they were or were not the results of external causes, or intemperance.

"Accidentally drowned;" "accidentally crushed;" "poisoned himself." [*Imperfect.*]

The place in which the person was drowned should have been stated. Was he precipitated into the water by the fall of a bridge, or the upsetting of a boat? Was he bathing, or skating, &c.? How was the body crushed, and by what?—What was the nature of the poison, &c.?

"By a machine."

"Injuries from machinery;" "fell down a coal-pit;" "explosion in a coal-pit." [*Imperfect.*]

The particular kind of machinery, and the names of the coal-pits, or of their owners, should have been returned; also the nature of the injury.

"Water in the chest and pericardium, accelerated by exposure to the severity of the weather." [*Imperfect.*]

In this return the cause and circumstances of exposure should have been stated. From destitution? Want of clothing, fire, or lodging?—Did it occur in employment in the fields—on board ship—in a fishing-boat—in travelling—or in what other situation?

"Hydrophobia." [*Imperfect.*]

Was the disease caused by the bite of a dog, cat, or what other animal? How many days or hours elapsed between the bite and the first symptoms of hydrophobia; and how many between the first symptoms and death?

Little can be ascertained respecting the causes of some deaths ; but in such cases *the name of water, yard, lane, or other place* in which the person is found should be stated ; and it should be added, whether “with or without marks of injury.”

In many cases the evidence is insufficient to decide positively whether the person committed suicide, fell into the water accidentally, or was murdered. In such case the *probable* cause may be returned in a qualified manner, together with the name of the river or other water ; such as “drowned in the Regent’s Canal, *probably* by accident.”

“ Found drowned.” “ Found dead.” [*Imperfect.*]

So of other cases, the cause, in favour of which there is *a strong probability*, should be stated with the proper qualifications. In other cases it should be stated that the circumstances are “ unknown.”

XIII. SUDDEN DEATHS.

Inquests are held in the cases of sudden as well as of violent deaths.* And it is stated by all the authorities in medical jurisprudence, that the causes of sudden deaths, often involved in great obscurity, can only be ascertained by an inspection of the principal organs. The body may have the same external appearance in death by apoplexy, syncope, aneurism, poison, or suffocation, and violence of other kinds ; but if the death be distinctly traced to a disease by an inspection of the body, this at the same time determines “ by what manner ” the person “ came to his end,” and, with the usual collateral evidence, leaves no more room for suspicion of innocence than hope of impunity for crime.

In the returns of the causes of death, it is sometimes found that *affections of the mind* are stated to have been attended by fatal results, but are reported in a vague and unsatisfactory manner, such as “ passion,” “ anxiety,” “ fright,” “ grief,” “ broken heart,” “ excitement.” The following are better examples of returns of this character:—“ Shock occasioned by the sudden death of her brother, who expired 3 months before ;” “ trouble for the death of her son, who died 6 weeks before ;” “ extreme grief, caused by one of her children having been lost for two days ;” “ mental anxiety from pecuniary embarrassments ;” “ illness caused by a fright from thunder and lightning ;” “ fright from her clothes taking fire.” The following as regards both cause and effect, are complete: “ apoplexy, produced by excitement while fighting in a state of intoxication ;” “ excitement and passion causing rupture of the left ventricle of the heart.”

* “ The court of the coroner is a court of record to inquire, when any one dies in prison, or comes to a violent or sudden death, *by what manner he came to his end*, Blackstone, b. 4, c. 19, s. 11 ; 4 Inst. 271 ; 2 Hal. P. C. 53 ; 2 Hawk. P. C. 42. See the 6 and 7 Vict. c. 12, as to the power of coroners to hold inquests where the *cause of death* arose out of their jurisdiction.

DEATHS OF LUNATICS AND PRISONERS.

In cases of insanity or lunacy, the fact and form of the malady should be invariably inserted in the "information;" thus,—mania, 1 year; phthisis, $\frac{1}{2}$ year. The cause of death by disease in *prisoners* can be generally ascertained, and should be returned on the same principles as ordinary cases of death. See *Statistical Nosology* and the *Medical Certificate Book*.

Extracts from 6 & 7 Gul. IV., cap. lxxxvi., being the "Act for registering Births, Deaths, and Marriages in England," relative to the Duties of Coroners and their Courts under that Act.

"In case any new-born child or any dead body shall be found exposed, the overseers of the poor in the case of the new-born child, and *the coroner in the case of the dead body*, shall forthwith give notice and information thereof, and of the place where such child or dead body was found, to the registrar."—SEC. 19.

"Provided always, That in every case in which an inquest shall be held on any dead body, the jury *shall inquire of the particulars herein required to be registered concerning the death*, and the coroner shall inform the registrar of the finding of the jury, and the registrar shall make the entry accordingly."—SEC. 25.

The particulars as given in Schedule (B) are "When died ('place of death' was added by the Amendment Act, 1 Vict., c. xxii., s. 8); name and surname, sex, age, rank or profession; cause of death."

"Provided always, That the coroner, upon holding any inquest, may order the body to be buried, if he shall think fit, before registry of the death, and shall in such case give a certificate of his order in writing under his hand, according to the form of Schedule (F.) to this Act annexed, to such undertaker or other person having charge of the funeral, which shall be delivered as aforesaid; and every person who shall bury or perform any funeral or any religious service for the burial of any dead body for which no certificate shall have been duly made and delivered as aforesaid, either by the registrar or coroner, and who shall not within seven days give notice thereof to the registrar, shall forfeit and pay any sum not exceeding ten pounds for every such offence."—SEC. 27.

SCHEDULE (F.)

"I, *James Smith*, Coroner for the County of *Dorset*, do hereby order the Burial of the Body now shown to the Inquest Jury as the Body of *John Jones*. Witness my Hand this *Eighth Day of March*, 1836.

"*James Smith*, Coroner."

The following are specimens of the Tables and Calculations now in progress. They exhibit: (1) The population enumerated of the several ages subjoined at the Census of June 6-7th, 1841. (2) The deaths in the 7 years 1838-1844, of which July 1st, 1841, was the middle. (3) The annual rate of mortality at each age. The calculation includes corrections for the increase of population from June 7th, to the middle of the year 1841, and for the ages of the living and dying not specified, as will be perceived from the annexed formulæ.

The mortality of Manchester and Liverpool is nearly the same, or only differs at some ages; it is rather the highest at certain ages in the former town. The enormous extent of the mortality in both these large places is appalling. The excess over the mortality of Surrey shows to what an extent it is unnatural and susceptible of remedy.

Formulæ used in calculating the mortality at different Ages.

Let f_{41} = the females enumerated at the Census of 1841, and f_{31} = the females enumerated at the Census of 1831; the interval between the two Censuses, was 10.0219 years, $\log. = 1.0009501$, and the annual rate of increase is

$$\left(\frac{f_{41}}{f_{31}}\right)^{\frac{1}{10.0219}} = r; \text{ or by logarithms}$$

$$\lambda (\lambda f_{41} - \lambda f_{31}) - \lambda 10.0219 = \lambda \lambda r.$$

L' = the living enumerated at all specified ages June 7th, 1841.

L = the living enumerated at all ages specified and unspecified, June 7th, 1841.

D' = the deaths in 7 years at all specified ages, 1838-44.

D = the deaths in 7 years at all specified and unspecified ages, 1838-44.

l'_x = the living enumerated at any age, x .

d'_x = the deaths in 7 years at any specified age, x .

d_x = the total deaths at the age, x .

l_x = the living at the age, x .

$$\text{Then } \left(\frac{L' D}{7 L D' r^{.07}}\right) \frac{d'_x}{l'_x} = \frac{d_x}{l_x} = m_x, \text{ the mortality at any age, } x.$$

Note on the Mode of expressing Age.—In ordinary language a person who was 20 at his last birthday is called 20 until he is 21; so in the following Tables the numbers living placed against the age 25 are the numbers living at the age 25 and under the next age in the column, namely, 35; and so in other cases.

POPULATION

that 50,090, more than half, die under that age: 26,892 die in the first twelvemonth after birth, 11,486 in the second year, &c.

By another method the number of births, out of which 73,118 persons, 36,091 males and 37,027 females, would survive one year are, 95,804 persons, 48,446 males, 47,358 females. The results of these two methods will be fully discussed in the Appendix to the next Report. In the mean time it will be sufficient to bear in mind that the mortality in the first year may be a little less than is here stated. This does not affect the probabilities of life after the age of one.

MANCHESTER LIFE TABLE.—MALES.

Age (or Birthdays).	Dying in each Year of Age 0-1, 1-2, to 101-102.	Born and Living at each Age (or at each Birthday.)	Sum of the Numbers Born and Living at each Age (x) from x to the last Age in the Table.	Population, or the Living in each Year of Age 0-1, 1-2, &c.	Sum of the Living in every Year, and of the Living of every Age (x) and upwards to the last Age in the Table; also the Years which the males D_x will live.	The Years which the males at the Age (x), and upwards, will live; also the Years which they have lived over the age x .
		$\Sigma C_x.$	$\Sigma D_x.$	$P_x = D_x + 1 + \frac{1}{2}C_x.$	$\Sigma P_x.$	$Y_x = Q_{x+1} + \frac{1}{2}P_x.$

the ΣDx from 20 will be $D_{20} + D_{21} + D_{22} \dots D_{106}$, the x being made to take all the values 20, 21, 22, &c.; at 20 the $\Sigma Dx = N_{20}$.

The formation, nature, and properties of this new form of Life Table, are explained in the Registrar General's Sixth Report, 8vo. Edition, Appendix.

RELATIVE DURATION of Life among Males in Manchester and in all England.

	Precise Age.	Manchester.	England.*	Manchester below the Average.

	100	1·2	1·5	..

* From the 6th Annual Report (8vo.) p. 655.

† The facts for MANCHESTER are too few to admit of a comparison after the age of 80.

The mean duration of life among Males in MANCHESTER is 24·2 years, or 16·0 years less than 40·2 years, the duration of life in all ENGLAND.

By another method the expectation of life at birth is 25·5 years in MANCHESTER.

MANCHESTER POPULATION TABLE.

At the last Census, of June 6—7th, 1841, the ages of 163,561 persons in Manchester were taken. The ages of 207 Males, and 88 Females were not ascertained. Omitting all reference to this small number, the Table shows (P) that 4,747, namely 2,335 Males, and 2,412 Females were under 1 year of age; that 17,863 were 20 and under 25, of whom 8,075, were Males, and 9,788 Females. That (Q) 74,381 persons, namely 35,684 Males, and 38,697 Females—(less than half of the whole population) were 25 years of age and upwards. That (Y) the whole population of 163,561 persons had lived 4,141,701 years, the Males 1,976,389 years, the Females 2,165,312 years; that the 92,244 persons aged 20 and upwards, had lived 1,623,978 years, or, on an average, 18 years over 20—and were nearly 38 years old.

Many of the irregularities in the column (P) are from erroneous statements of age; the ages guessed at being almost always referred to the round numbers 20, 30, 40, 50, &c., make the numbers in the corresponding quinquennia excessive. These errors are not of great importance, and have not been corrected in this Table, which by a very simple arrangement of the facts, enables us to answer very readily many questions relative to the population of Manchester. The mean age, for instance, of the people of Manchester, one with another, is 25 years; as is shown by dividing the number of years lived (4,141,701) by the number of persons (163,561). The mean age of persons above 20 is 38 years. Other properties and uses of the Table are sufficiently obvious. See the 6th Report, Appendix, Article Life Tables.

The following are extracts from a “*Specimen of a proposed Publication of the Number and Ages of the Population in the Registration Districts of England*,” the whole of which will be found in the Appendix to the Folio Edition of this, the Seventh Annual Report.

* Males of 15 years of age and upwards, nearly all Military, *in Barracks*, have been subtracted from the males enumerated in 1841. This correction makes the males of that Census comparable with the males enumerated in the censuses of 1801–11–21–31, when the Military were omitted. Seamen ashore in Her Majesty's Service or belonging to registered vessels, were enumerated in 1841 in the places in which they slept on the night of June 6–7, 1841; while in the previous Censuses the Overseers were instructed to omit them; but it has not been thought necessary to deduct those returned as seamen from any town in Kent.

† When no mention is made of Hulks in Kent, as in the Censuses of 1801 and 1821, the convicts, if any were confined in the county, are returned with the general population of the places in which they occur, or are altogether omitted.
